

**IMPORTANT NOTICE REGARDING  
CON EDISON SPECIFICATIONS**

Any change or modification to our specifications or Service Layouts **requires advance approval** from Con Edison.

Our specifications have been designed with great care to assure compliance with all the various codes and safety requirements. Changing anything without prior approval will result in the **job not being accepted**.

Delays will result because the contractor will be required to correct the change, at the contractor's expense.

There is also the possibility that a code or safety violation will be created.

Any change from the type of equipment, the location, or point of entrance (POE) requires advance Con Edison approval.

Con Edison representatives are available to discuss any detail while in the planning stage. However, when it is after the fact, it usually results in re-doing the job to Con Edison's Service Specifications and Service Layouts.

When Con Edison has assessed the request for service, a Service Request (2-80) will be forwarded to the applicant and customer with the requirements necessary to fulfill our approval.
