1. Introduction

This Remedial Action Work Plan (RAWP) was prepared by GEI Consultants, Inc. (GEI), on behalf of Consolidated Edison Company of New York, Inc. (Con Edison), to address subsurface contamination associated with the historic operations of the former East 173rd Street Works manufactured gas plant (MGP) site located in the Bronx, New York. This RAWP was developed in accordance with the terms of the Voluntary Cleanup Agreement (VCA), dated August 15, 2002, Index #02-0003-02-08, between Con Edison and the New York State Department of Environmental Conservation (NYSDEC), and the criteria contained in Section 7 of NYSDEC's Draft Voluntary Cleanup Program Guide, dated May 2002.

The former MGP site is located in a portion of Starlight Park, which is located adjacent to the Bronx River. The remedial activities described in this RAWP address Operable Unit 1 (OU1), which consists of the former MGP site. The potential impact of the former MGP on adjacent areas of the Bronx River is currently the subject of additional investigation as Operable Unit 2 (OU2). Remedial activities for OU2, if required, will be addressed by a separate RAWP.

The major elements of this RAWP were previously presented to the NYSDEC, New York State Department of Health (NYSDOH), the New York City Department of Parks and Recreation (Parks Department), and community stakeholders in a document titled "Proposed Remedial Approach, East 173rd Street Works (Starlight Park), Bronx Former MGP Site," dated April 30, 2003. This RAWP provides expanded descriptions of the remedial activities described in the Proposed Remedial Approach, and incorporates modifications to the Proposed Remedial Approach based on comments received from NYSDEC, NYSDOH, Parks Department, and community stakeholders. Additional coordination with the Parks Department to incorporate their detailed requirements into the remedial design are ongoing, and will be reflected in the next submittal, to include draft construction drawings and engineering specifications.

1.1 Site Description

The East 173rd Street former MGP site (the Site) is located between the Sheridan Expressway and the Bronx River in the neighborhood of West Farms, in the Borough of the Bronx, New York (Figure 1). The Site is defined as all land occupied by former MGP operations. The term "on site" refers to land within the boundary of the former MGP. The Site is approximately 3 acres in size and is located within the central portion of Starlight Park (approximately 8 acres), a part of the Bronx River Park. The Site is currently covered with approximately 40 inches to 80 inches of fill soil (urban fill) placed during park construction after the MGP was decommissioned. The former MGP property boundary and the locations of MGP structures are

shown on Figure 2. Starlight Park is currently owned by the City of New York and is operated by the Parks Department.

1.2 Site History

The Site was owned by several Con Edison predecessor companies from 1859 to 1936. From 1936 to 1945, the Site was owned by Con Edison. Since 1945, the Site has been owned by the City of New York. Historic records confirm that an MGP operated at the Site between 1893 and 1912. However, based on gas franchise ownership records, MGP operation may have begun earlier. Subsequent records suggest that between 1912 and 1923, the facilities at the Site were used primarily for gas storage and as a standby plant. Sometime prior to 1943, the gas holders were taken down and the associated buildings were partially removed. The Site was used by Con Edison as a storage facility and garage until it was sold to the City of New York in December 1945. During the MGP operations, the Bronx River channel was located in its native channel adjacent to the southern side of the Site, as shown in Figure 2.

The last plant building was taken down in the 1950s by the City of New York. Starlight Park was reportedly constructed in the 1960s. During the 1960s, the Bronx River channel was moved its current location south of the site and the Sheridan Expressway was constructed.

1.3 Summary of Previous Investigations

GEI conducted a focused remedial investigation (FRI) at the Site from June 2002 through August 2002. The FRI was performed to:

- Locate the subsurface remnants of any MGP structures or other structures that may exist in Starlight Park and that might be associated with waste source areas or might serve as preferential pathways for the migration of MGP waste or other contamination
- Characterize potential MGP impacts in Starlight Park's soil and groundwater, and in Bronx River sediment
- Characterize site-specific geology and hydrology
- Delineate the lateral and vertical extent of potential MGP waste impacts in the soil, groundwater, and sediment

The investigation included test pits, soil borings, rock coring, well installation, piezometer installation, filed testing, and sediment sampling. Media tested included surface soil, subsurface soil, groundwater, and sediment. The locations of the media testing are shown on Figure 3. Detailed descriptions of the investigations and individual test results are contained in the report

titled *Focused Remedial Investigation, East 173rd Street Works, Bronx, New York* (FRI) by GEI, dated April 2003.

1.4 Summary of Environmental Conditions on the Site

Potential contaminants associated with the production, purification and storage of manufactured gas include liquid residues and solid by-products. Liquid residues include tars and oils that are complex mixtures of hydrocarbons. Organic compounds associated with these tars and oils include volatile organic compounds (VOCs) and semivolatile organic compounds (SVOCs). Solid by-products commonly found at MGP sites include ash, purifier material and solidified tar. Inorganic compounds associated with ash and purifier material include metals and complex cyanide compounds. The mixture of organic and inorganic compounds found at any particular MGP site is dependent on the nature and source of the raw materials and gas making processes historically used at the MGP.

Compounds detected in soil, sediment, and groundwater at the Site include individual VOCs, SVOCs, and inorganic compounds. Many of the inorganic and organic compounds detected in on-site media can be associated with MGP residues; however, some of these detected compounds may also occur in background concentrations associated with urban fill soil and groundwater.

The conclusions from the FRI report regarding OU-1 are summarized below according to each media.

- ***Urban Fill*** – The uppermost soils [from the ground surface to between 40 and 80 inches below the current ground surface (cgs)] are not impacted by former MGP operations. The uppermost soils at Starlight Park have been mapped as transported urban fill by the Natural Resources Conservation Service (NRCS). The urban fill soil was placed over the former MGP surface after the MGP ceased operating for construction of Starlight Park and filling of the former Bronx river channel.

- ***Subsurface Soil*** – Subsurface soils (i.e., below the urban fill) consist predominately of glacial till deposits overlain by organic rich alluvial marsh deposits. MGP-era fill and a historic MGP soil horizon overlie the alluvial marsh deposits. The urban fill deposits overlie these subsurface soils. Physical evidence of MGP residue and analytical results indicate that on-site subsurface soils (i.e., MGP-era fill, alluvial marsh deposits, and glacial deposits) are impacted by the former MGP operations. VOCs, SVOCs, and metals were detected in subsurface-soil samples at concentrations that exceed the Recommended Soil Cleanup Objectives (RSCOs) [NYSDEC Technical Administrative Guidance Memorandum (TAGM) 4046, 1994]. The samples exhibiting the highest SVOC concentrations and the greatest number of individual SVOCs that exceed RSCO

criteria were collected from on-site subsurface soils containing dense nonaqueous phase liquid (DNAPL) tar. The DNAPL tar is limited to discrete areas within the former MGP boundary, at depths between 8 and 20.5 feet below the cgs.

- ***Groundwater*** – Groundwater samples collected from on-site wells located in areas of MGP-impacted subsurface soils and along the hydraulically downgradient Site boundary contained concentrations of VOCs and SVOCs above the New York State Ambient Water Quality Standards (AWQS) for a GA Water Class. The DNAPL tar may represent a continuing source for VOC and SVOC groundwater contamination. Cyanide was detected at a concentration above AWQS in one on-site well located in an area of impacted subsurface soil. Cyanide was not detected in groundwater samples collected from monitoring wells located along the hydraulically downgradient Site boundary.

- ***MGP Structures*** – Remnants of several MGP structures are present beneath the surface of the Site. The rims of the two subsurface water-seal holders were encountered at a depth starting approximately 6 feet below the cgs, and the holder bottoms were encountered at depths of 18 feet and 22 feet below the cgs. The slab of the former above-grade holder was uncovered at a depth of approximately 4.5 feet below the cgs. The floors of several of the former MGP buildings were encountered at depths ranging between 3 and 5 feet below the cgs.

The FRI report presented the conclusion that subsurface soils and groundwater within the park are impacted by former MGP operations, and remediation is necessary. This RAWP is focused on the MGP-impacted areas that have been identified within OU-1.

1.5 Contemplated Future Site Use

The Site and other portions of Starlight Park are currently being used as staging areas for contractors working on the New York State Department of Transportation (NYSDOT) Sheridan Expressway reconstruction project, which is expected to be completed in the summer of 2004. After the Remedial Action project is completed, the park will be reconstructed by the NYSDOT and Parks Department. The reconstructed park includes a vehicle parking area, boathouse, ball fields, basketball court, playground, picnic area, sanitation facilities, and walking paths. The Site corresponds to the location of the planned ball fields, as shown on Figure 4. The redevelopment features shown on Figure 4 are based on NYSDOT Plans and Drawings for the Mainline Improvement I-895, Arthur Sheridan Expressway (which includes the renovations to Starlight Park), dated May 1, 2001, and subsequent conversations with NYSDOT representatives. Figure 5 illustrates the proposed surface grade reductions (in feet below the current ground surface) for specific areas of the Site. The final surface grade over most of the Site will be 1 to 4 feet lower than the current ground surface to accommodate the requirements of the ball fields. For purposes of clarity the future grade of the park will be referred to as the "redevelopment grade."

5. Subsurface Conditions

*Boring Logs available upon request

The following interpretation of subsurface conditions at the site is based on review of geologic maps; more than 100 explorations consisting of test pits, soil borings, monitoring wells, test wells and piezometers within Starlight Park; geotechnical field and laboratory testing; and environmental field screening and analytical analyses.

The general subsurface profile includes the following strata in descending order: urban fill, MGP-era fill, organic soil, glacial deposits, and bedrock. The MGP-era fill, organic soil, and glacial deposits constitute subsurface soil. Subsurface profiles A and B are shown on Figure 4 and subsurface profiles C and D are shown on Figure 5. The locations of the profiles are shown on Figure 3.

5.1 Urban Fill

The urban fill stratum has been mapped as transported urban fill by the Natural Resources Conservation Service (NRCS). The urban fill has not been impacted by former MGP operations since it was placed over the former MGP surface after the MGP operations ceased. The urban fill was placed for construction of Starlight Park and filling of the former Bronx River channel. The stratum is laterally continuous across the site. The stratum thickness ranges from approximately 3 to 8 feet thick with an average thickness on the order of 5 feet. In the former Bronx River channel, 17 feet of urban fill was encountered in SB-21.

Urban fill predominantly consists of coarse-grained soil with some non-soil materials. The soil is widely- to narrowly-graded and the grain sizes include silt, fine to coarse sand, and fine to coarse gravel. The non-soil materials include brick, wood, wire, ash, coal, cinders, miscellaneous fill, boulders, etc. Test pits TP-9B, TP-9C, and TP-29 each contained massive blast rock that was imported to the site (i.e., blast rock was used to fill the former river channel). Part of the urban fill is capped with asphalt. The urban fill stratum is predominantly considered to be loose to medium dense based on SPT N-values, and likely includes undetected soft to very loose zones. The stratum color includes shades of black, brown, and gray.

5.2 MGP-Era Fill

MGP-era fill is present below the urban fill stratum. The stratum thickness typically ranges from 5 feet to 10 feet thick with a maximum thickness of 25 feet. The top of this stratum

likely represents the former ground surface during the operations of the MGP. The stratum is laterally continuous across the former MGP site.

MGP-era fill predominantly consists of coarse-grained soil with some non-soil materials. The soil is widely- to narrowly-graded and the grain sizes include silt, fine to coarse sand, and fine to coarse gravel. The non-soil materials include brick, wood, wire, ash, coal, slag, cinders, miscellaneous fill, rock fragments, etc. The MGP-era fill stratum is predominantly considered to be very loose to medium dense based on SPT N-values. The stratum color includes shades of black, brown, and gray.

5.3 Organic Soil

Organic soil is present below the MGP-era fill stratum. The stratum thickness typically ranges from 4 feet to 10 feet thick with a maximum thickness of 14 feet. Physical evidence of MGP residue and analytical results indicate that organic soil has been impacted by the former MGP operations. The organic soil stratum was encountered in approximately 67 percent of the logged explorations. The stratum is absent in the areas of the site in which the subsurface holders were constructed (i.e., the organic soil was likely excavated during holder construction) and within the former Bronx River channel.

The organic soil predominantly consists of freshwater tidal marsh deposits containing organic matter consisting of root mat, root fibers, and peat that are bonded by a matrix of fine sand, organic silt and clay. The organic soil stratum is predominantly considered to be very loose to soft based on SPT N-values. The stratum color includes shades of black and brown.

5.4 Glacial Deposits

Glacial deposits are present below the organic soil stratum. The glacial deposits include glacial till and glacial alluvial zones. The glacial till horizon is typically thin and underlies the glacial alluvial zones. Evidence of reworking of the glacial deposits (i.e., stratification) by fluvial processes was observed in split-barrel samples. The stratum thickness typically ranges from 4 feet to 12 feet thick with a maximum thickness of 20 feet. Physical evidence of MGP residue and analytical results indicate that glacial deposits have been impacted by the former MGP operations.

The glacial deposits stratum was encountered in approximately 55 percent of the logged explorations. The glacial deposit stratum is predominantly considered to be medium dense to very dense based on SPT N-values. The stratum color includes shades of brown and gray.

5.5 MGP Impacts on Subsurface Soil

VOCs, SVOCs, and metals were detected in subsurface soil samples at concentrations that exceed the Recommended Soil Cleanup Objectives. The samples exhibiting the highest SVOC concentrations and the greatest number of individual SVOCs that exceed Recommended Soil Cleanup Objective (RSCO) criteria were collected from on-site subsurface soils containing dense nonaqueous phase liquid (DNAPL) tar. The DNAPL tar is limited to discrete areas within the former MGP boundary, at depths ranging from 8 and 26 feet.

5.6 Bedrock

Bedrock consists predominantly of muscovite-biotite schist with some quartz-rich zones. This rock type is consistent with the lithology of the Hartland Formation. Bedrock was cored in 12 explorations and inferred in 38 explorations based on auger refusal, which was assumed to indicate bedrock.

The depth to the top of the bedrock surface ranged from approximately 16 feet to 39 feet, and 50 percent of the depths ranged from 25 feet to 31 feet. These depths correlate to elevations ranging from –5 feet to –28 feet. Bedrock outcrops are present southwest of the site across the Sheridan Expressway. Glacial and alluvial processes have shaped the bedrock surface. The bedrock surface north of the former Bronx River channel dips predominantly in a south-southeastern direction toward the former Bronx River channel. The bedrock surface south of the former Bronx River channel dips predominantly northwest toward the former Bronx River Channel.

The core recovery ranged from 88 to 100 percent (based on 5-core runs). Rock Quality Designation (RQD) measurements provide an indication of the fracture intensity. The RQD values ranged from 30 to 100 percent. The majority of the RQD values (8 of the 12 cores) are greater than 70 percent.

5.7 Groundwater

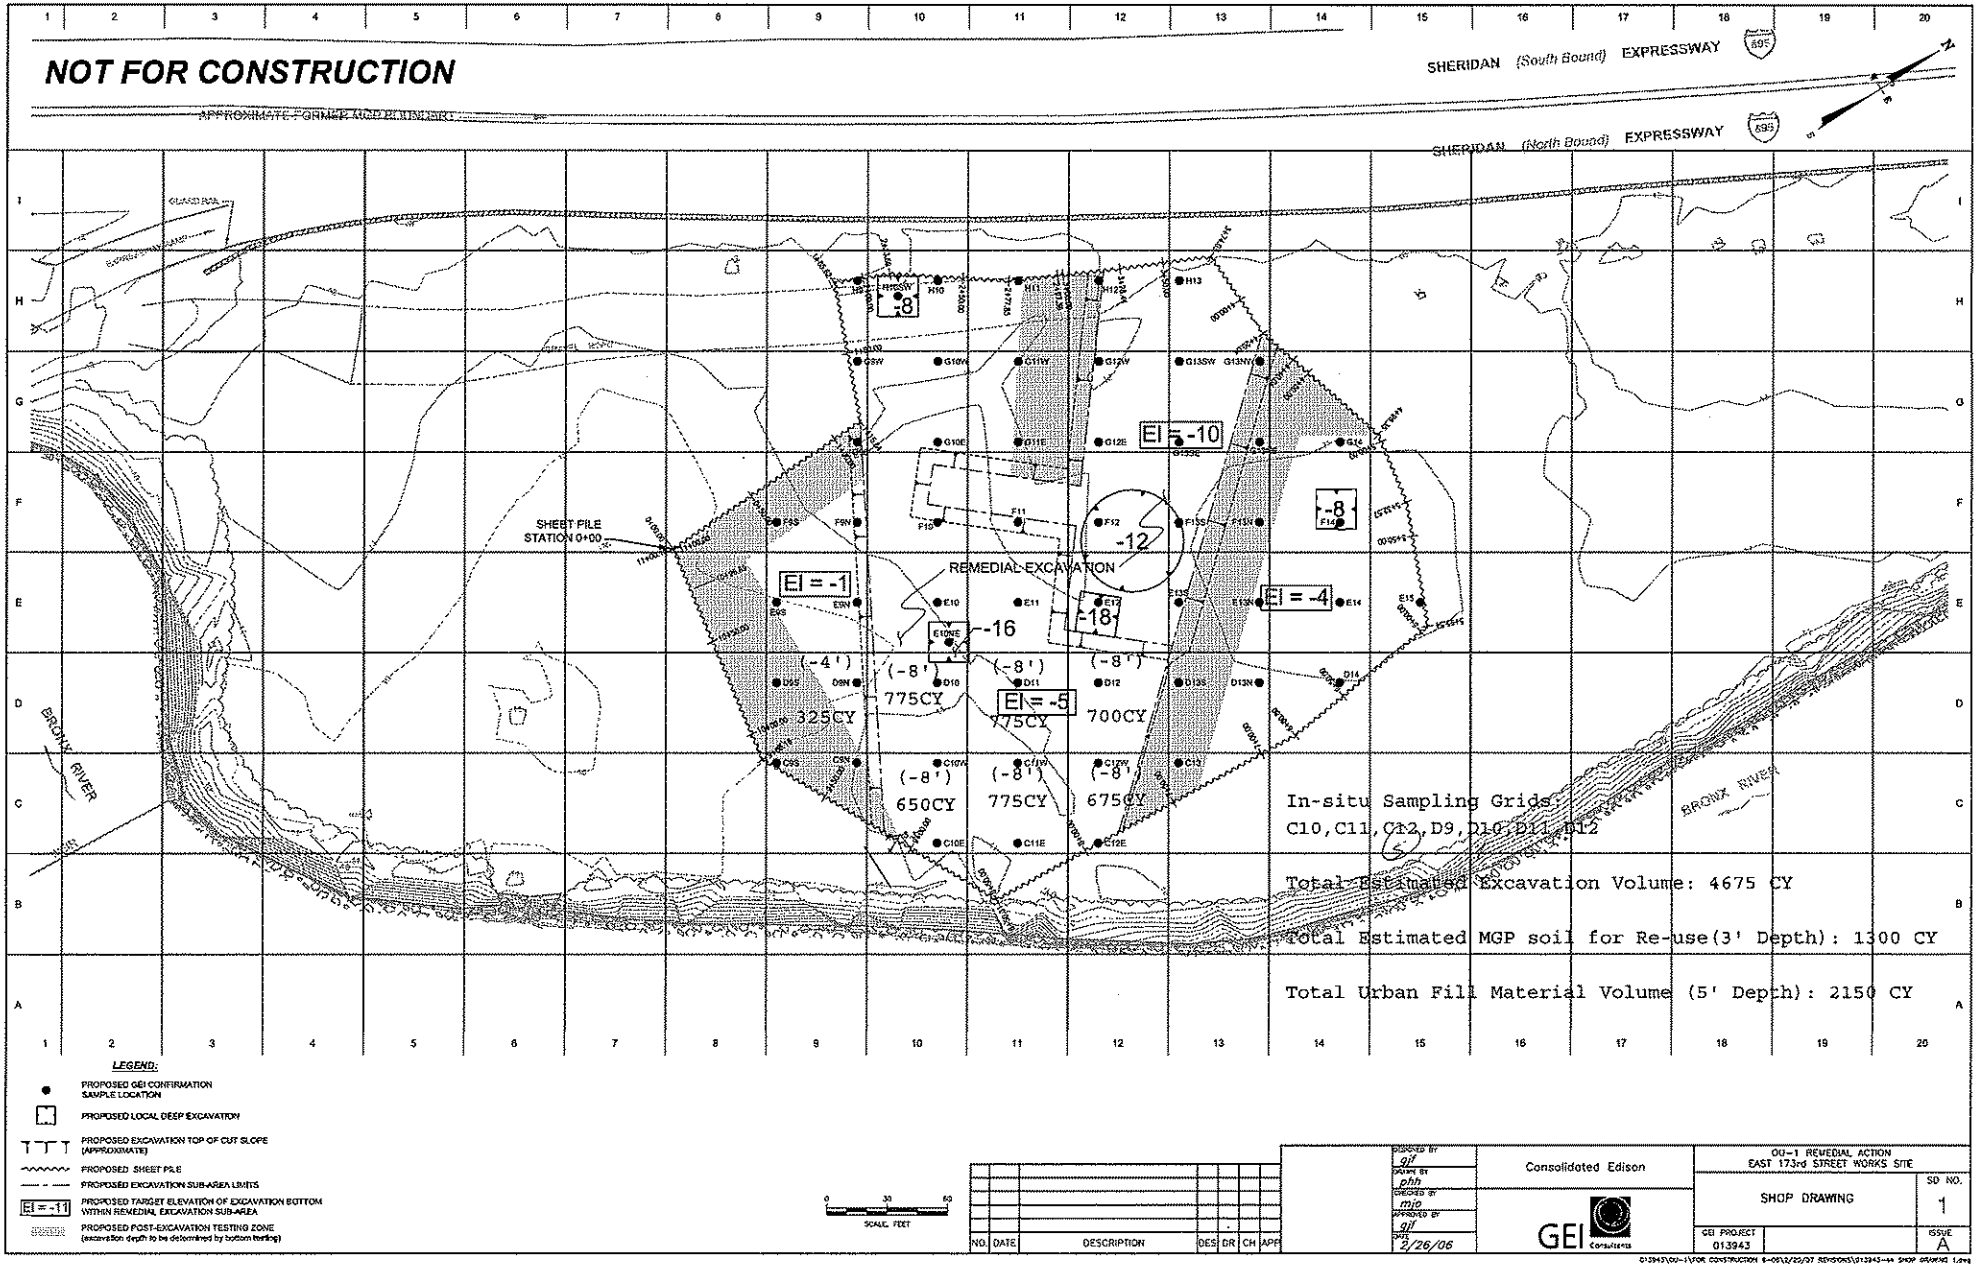
The depth to groundwater was measured in the test pits and wells. Based on 42 groundwater measurements, the depth to water ranges from 6½ to 14 feet with greater than 50 percent of the depth measurements ranging from 9 to 11 feet. These depths correlate to a groundwater surface ranging from elevation 3 (Bronx highway datum) to elevation -4 with greater than 50 percent of the groundwater elevations ranging from elevation 1.5 to -0.5 feet.

Groundwater samples collected from wells located in areas of MGP-impacted subsurface soil and hydraulically downgradient contained concentrations of VOCs and SVOCs above the

New York State Ambient Water Quality Standards (AWQS) for a GA Water Class. The DNAPL tar may represent a source for VOC and SVOC groundwater contamination. Cyanide was detected at a concentration above AWQS in wells MW-2D and MW-2D, located in an area of impacted subsurface soil, and in well MW-4S. Cyanide was not detected in groundwater samples collected from monitoring wells MW-3S, MW-3D, MW-4D, MW-6S, and MW-6D, which are located hydraulically downgradient.

5.8 MGP-Era Structures

Remnants of several MGP structures are present beneath the ground surface and were encountered in test pits and soil borings. Product piping and other conduits are likely present beneath the ground surface. MGP-era structures are shown on the historical conditions plan.



A concrete slab/footing was encountered at a depth of 3 feet in TP-1. The slab/footing was likely a part of the retort house. Test pits TP-2 and TP-3 uncovered a portion of the 75,000-cubic-foot subsurface holder rim at depths ranging from 4 to 5 feet. Test pit TP-4 uncovered a portion of the 60,000-cubic-foot (estimated) subsurface holder rim at a depth of approximately 8 feet. The holder rims are constructed of brick and are approximately 18 inches thick. A concrete slab was encountered at a depth of 4.6 feet in test pit TP-6 and a depth of 4.1 feet in TP-7. This slab was most likely the foundation for the former above-grade holder. Test pits TP-9C and TP-27A, excavated in the area of the former Bronx River channel, encountered a concrete slab and timbers most likely associated with the former river bulkhead that was part of the former MGP waterfront. The bulkhead was encountered at 5 feet in TP-9C and at 6 feet in TP-27A. A brick wall was uncovered at a depth of 4.7 to 7.4 feet in test pit TP-10. The wall is likely part of the purifying house. The top of a wall was uncovered at a depth of 5 feet in test pit TP-11. The wall is likely part of the naphtha tanks. A brick wall was uncovered at a depth of 5 to 12 feet in test pit TP-12A. This wall may be a retaining wall for the former river embayment. Test pits TP-16 and TP-28 uncovered a concrete slab at 4.5 feet and 5.4 feet, respectively. This slab is most likely the floor of the former storage building. Cast iron pipe, most likely associated with former MGP operations, was encountered at depths greater than 8 feet in test pits TP-13 and TP-14.

The bottom of the subsurface water-seal holders was encountered in SB-2, SB-2A, SB-4, and SB-4A. Borings SB-2 and SB-2A encountered the bottom of the 75,000-cubic-foot subsurface holder at depths of 16½ to 18 feet. Borings SB-4 and SB-4A encountered the bottom of the 60,000-cubic-foot (estimated) subsurface holder at a depth of 22 feet.

5.9 Tidal Fluctuations

River surface fluctuation due to tidal influences was measured to be on the order of 5½ to 6 feet below the weir and on the order of 4 to 5 feet above the weir. Tidal fluctuations above the weir are about 1 foot less than tidal fluctuations below the weir due to the weir maintaining a minimum river surface elevation. The tidal data from river gage RG-1 and RG-2 is included in Appendix D.

Water surface fluctuation due to tidal influences were measured to be on the order of ½ foot in MW-4S located approximately 20 feet west of the river and less than 0.1 foot in MW-2S located approximately 150 feet west of the river. Tidal fluctuations were not detected in MW-1S located approximately 300 feet west of the river (near the Sheridan Expressway). Water surface fluctuation due to tidal influences were measured to be on the order of 1½ foot in MW-4D and ½ foot in MW-1D. The tidal response times measured in the wells is very similar to tidal response times measured in the river gages.

Notes and Definitions

U	Analyte included in the analysis, but not detected
S-06	The recovery of this surrogate is outside control limits due to sample dilution required from high analyte concentration and/or matrix interference's.
S-04	The surrogate recovery for this sample is outside of established control limits due to a sample matrix effect
L	L denotes analyte recovery is less than the lower quality control limit
G	G denotes analyte recovery is greater than the upper quality control limit
D	This flag assigned to compounds identified in an analysis at a secondary dilution factor.
B	Analyte is found in the associated blank as well as in the sample (CLP B-flag).
DET	Analyte DETECTED
ND	Analyte NOT DETECTED at or above the reporting limit
NR	Not Reported
dry	Sample results reported on a dry weight basis
RPD	Relative Percent Difference

The results in this report apply to the samples analyzed in accordance with the chain of custody document. This analytical report must be reproduced in its entirety.

Report Narrative

Client: Waste Stream Technology Inc.
Order Number: 0707404

Solid sample results are reported on a wet weight basis except as noted.
No problems were encountered during analysis of this order number, except as noted.

Data Qualifiers:
B = Analyte found in the method blank
J = Estimated concentration of an analyte between the MDL (LOD) and the Reporting Limit (LOQ)
C = Analyte has been confirmed by another instrument or method
E = Analyte exceeds the upper limit of the calibration curve.
D = Sample or extract was analyzed at a higher dilution
X = User defined data qualifier.
S = Surrogate out of control limits
a = Not Accredited by AALA or NELAC

Limit Of Quantitation (LOQ) = Laboratory Reporting Limit

Estimated uncertainty values are available upon request.

The test results meet the requirements of the NELAC and A2LA standards, except where noted.
The information contained in this analytical report is the sole property of Summit Environmental Technologies, Inc. and that of the client. It cannot be reproduced in any form without the consent of Summit Environmental Technologies, Inc. or the client for which this report was issued. The results contained in this report are only representative of the samples received. Conditions can vary at different times and at different sampling conditions. Summit Environmental Technologies, Inc. is not responsible for use or interpretation of the data included herein.

ANALYTICAL REPORT FOR SAMPLES

Sample ID	Laboratory ID	Matrix	Date Sampled	Date Received
Stockpile 1 - Grab 1	6L22003-01	Soil	12/20/06 13:58	12/22/06 10:00
Stockpile 1 - Grab 2	6L22003-02	Soil	12/20/06 14:02	12/22/06 10:00
Stockpile 1 - Grab 3	6L22003-03	Soil	12/20/06 14:06	12/22/06 10:00
Stockpile 1 - Comp.	6L22003-04	Soil	12/20/06 14:08	12/22/06 10:00

Method 8270C Soil Analysis Notes:

Due to the high level of petroleum hydrocarbon contamination, the Method8270C soil extract for sample number 6L22003-03 required a two fold dilution for analysis. The contamination also caused the recoveries for the base/neutral surrogate compounds nitrobenzene-d5 and terphenyl-d14 to be outside the quality control recovery limits.

The results in this report apply to the samples analyzed in accordance with the chain of custody document. This analytical report must be reproduced in its entirety.

ATTACHMENT A

1. Introduction

This Remedial Action Work Plan (RAWP) was prepared by GEI Consultants, Inc. (GEI), on behalf of Consolidated Edison Company of New York, Inc. (Con Edison), to address subsurface contamination associated with the historic operations of the former East 173rd Street Works manufactured gas plant (MGP) site located in the Bronx, New York. This RAWP was developed in accordance with the terms of the Voluntary Cleanup Agreement (VCA), dated August 15, 2002, Index #02-0003-02-08, between Con Edison and the New York State Department of Environmental Conservation (NYSDEC), and the criteria contained in Section 7 of NYSDEC's Draft Voluntary Cleanup Program Guide, dated May 2002.

The former MGP site is located in a portion of Starlight Park, which is located adjacent to the Bronx River. The remedial activities described in this RAWP address Operable Unit 1 (OU1), which consists of the former MGP site. The potential impact of the former MGP on adjacent areas of the Bronx River is currently the subject of additional investigation as Operable Unit 2 (OU2). Remedial activities for OU2, if required, will be addressed by a separate RAWP.

The major elements of this RAWP were previously presented to the NYSDEC, New York State Department of Health (NYSDOH), the New York City Department of Parks and Recreation (Parks Department), and community stakeholders in a document titled "Proposed Remedial Approach, East 173rd Street Works (Starlight Park), Bronx Former MGP Site," dated April 30, 2003. This RAWP provides expanded descriptions of the remedial activities described in the Proposed Remedial Approach, and incorporates modifications to the Proposed Remedial Approach based on comments received from NYSDEC, NYSDOH, Parks Department, and community stakeholders. Additional coordination with the Parks Department to incorporate their detailed requirements into the remedial design are ongoing, and will be reflected in the next submittal, to include draft construction drawings and engineering specifications.

1.1 Site Description

The East 173rd Street former MGP site (the Site) is located between the Sheridan Expressway and the Bronx River in the neighborhood of West Farms, in the Borough of the Bronx, New York (Figure 1). The Site is defined as all land occupied by former MGP operations. The term "on site" refers to land within the boundary of the former MGP. The Site is approximately 3 acres in size and is located within the central portion of Starlight Park (approximately 8 acres), a part of the Bronx River Park. The Site is currently covered with approximately 40 inches to 80 inches of fill soil (urban fill) placed during park construction after the MGP was decommissioned. The former MGP property boundary and the locations of MGP structures are

shown on Figure 2. Starlight Park is currently owned by the City of New York and is operated by the Parks Department.

1.2 Site History

The Site was owned by several Con Edison predecessor companies from 1859 to 1936. From 1936 to 1945, the Site was owned by Con Edison. Since 1945, the Site has been owned by the City of New York. Historic records confirm that an MGP operated at the Site between 1893 and 1912. However, based on gas franchise ownership records, MGP operation may have begun earlier. Subsequent records suggest that between 1912 and 1923, the facilities at the Site were used primarily for gas storage and as a standby plant. Sometime prior to 1943, the gas holders were taken down and the associated buildings were partially removed. The Site was used by Con Edison as a storage facility and garage until it was sold to the City of New York in December 1945. During the MGP operations, the Bronx River channel was located in its native channel adjacent to the southern side of the Site, as shown in Figure 2.

The last plant building was taken down in the 1950s by the City of New York. Starlight Park was reportedly constructed in the 1960s. During the 1960s, the Bronx River channel was moved its current location south of the site and the Sheridan Expressway was constructed.

1.3 Summary of Previous Investigations

GEI conducted a focused remedial investigation (FRI) at the Site from June 2002 through August 2002. The FRI was performed to:

- Locate the subsurface remnants of any MGP structures or other structures that may exist in Starlight Park and that might be associated with waste source areas or might serve as preferential pathways for the migration of MGP waste or other contamination
- Characterize potential MGP impacts in Starlight Park's soil and groundwater, and in Bronx River sediment
- Characterize site-specific geology and hydrology
- Delineate the lateral and vertical extent of potential MGP waste impacts in the soil, groundwater, and sediment

The investigation included test pits, soil borings, rock coring, well installation, piezometer installation, filed testing, and sediment sampling. Media tested included surface soil, subsurface soil, groundwater, and sediment. The locations of the media testing are shown on Figure 3. Detailed descriptions of the investigations and individual test results are contained in the report

titled *Focused Remedial Investigation, East 173rd Street Works, Bronx, New York* (FRI) by GEI, dated April 2003.

1.4 Summary of Environmental Conditions on the Site

Potential contaminants associated with the production, purification and storage of manufactured gas include liquid residues and solid by-products. Liquid residues include tars and oils that are complex mixtures of hydrocarbons. Organic compounds associated with these tars and oils include volatile organic compounds (VOCs) and semivolatile organic compounds (SVOCs). Solid by-products commonly found at MGP sites include ash, purifier material and solidified tar. Inorganic compounds associated with ash and purifier material include metals and complex cyanide compounds. The mixture of organic and inorganic compounds found at any particular MGP site is dependent on the nature and source of the raw materials and gas making processes historically used at the MGP.

Compounds detected in soil, sediment, and groundwater at the Site include individual VOCs, SVOCs, and inorganic compounds. Many of the inorganic and organic compounds detected in on-site media can be associated with MGP residues; however, some of these detected compounds may also occur in background concentrations associated with urban fill soil and groundwater.

The conclusions from the FRI report regarding OU-1 are summarized below according to each media.

- ***Urban Fill*** – The uppermost soils [from the ground surface to between 40 and 80 inches below the current ground surface (cgs)] are not impacted by former MGP operations. The uppermost soils at Starlight Park have been mapped as transported urban fill by the Natural Resources Conservation Service (NRCS). The urban fill soil was placed over the former MGP surface after the MGP ceased operating for construction of Starlight Park and filling of the former Bronx river channel.

- ***Subsurface Soil*** – Subsurface soils (i.e., below the urban fill) consist predominately of glacial till deposits overlain by organic rich alluvial marsh deposits. MGP-era fill and a historic MGP soil horizon overlie the alluvial marsh deposits. The urban fill deposits overlie these subsurface soils. Physical evidence of MGP residue and analytical results indicate that on-site subsurface soils (i.e., MGP-era fill, alluvial marsh deposits, and glacial deposits) are impacted by the former MGP operations. VOCs, SVOCs, and metals were detected in subsurface-soil samples at concentrations that exceed the Recommended Soil Cleanup Objectives (RSCOs) [NYSDEC Technical Administrative Guidance Memorandum (TAGM) 4046, 1994]. The samples exhibiting the highest SVOC concentrations and the greatest number of individual SVOCs that exceed RSCO

criteria were collected from on-site subsurface soils containing dense nonaqueous phase liquid (DNAPL) tar. The DNAPL tar is limited to discrete areas within the former MGP boundary, at depths between 8 and 20.5 feet below the cgs.

- ***Groundwater*** – Groundwater samples collected from on-site wells located in areas of MGP-impacted subsurface soils and along the hydraulically downgradient Site boundary contained concentrations of VOCs and SVOCs above the New York State Ambient Water Quality Standards (AWQS) for a GA Water Class. The DNAPL tar may represent a continuing source for VOC and SVOC groundwater contamination. Cyanide was detected at a concentration above AWQS in one on-site well located in an area of impacted subsurface soil. Cyanide was not detected in groundwater samples collected from monitoring wells located along the hydraulically downgradient Site boundary.

- ***MGP Structures*** – Remnants of several MGP structures are present beneath the surface of the Site. The rims of the two subsurface water-seal holders were encountered at a depth starting approximately 6 feet below the cgs, and the holder bottoms were encountered at depths of 18 feet and 22 feet below the cgs. The slab of the former above-grade holder was uncovered at a depth of approximately 4.5 feet below the cgs. The floors of several of the former MGP buildings were encountered at depths ranging between 3 and 5 feet below the cgs.

The FRI report presented the conclusion that subsurface soils and groundwater within the park are impacted by former MGP operations, and remediation is necessary. This RAWP is focused on the MGP-impacted areas that have been identified within OU-1.

1.5 Contemplated Future Site Use

The Site and other portions of Starlight Park are currently being used as staging areas for contractors working on the New York State Department of Transportation (NYSDOT) Sheridan Expressway reconstruction project, which is expected to be completed in the summer of 2004. After the Remedial Action project is completed, the park will be reconstructed by the NYSDOT and Parks Department. The reconstructed park includes a vehicle parking area, boathouse, ball fields, basketball court, playground, picnic area, sanitation facilities, and walking paths. The Site corresponds to the location of the planned ball fields, as shown on Figure 4. The redevelopment features shown on Figure 4 are based on NYSDOT Plans and Drawings for the Mainline Improvement I-895, Arthur Sheridan Expressway (which includes the renovations to Starlight Park), dated May 1, 2001, and subsequent conversations with NYSDOT representatives. Figure 5 illustrates the proposed surface grade reductions (in feet below the current ground surface) for specific areas of the Site. The final surface grade over most of the Site will be 1 to 4 feet lower than the current ground surface to accommodate the requirements of the ball fields. For purposes of clarity the future grade of the park will be referred to as the "redevelopment grade."

5. Subsurface Conditions

*Boring Logs available upon request

The following interpretation of subsurface conditions at the site is based on review of geologic maps; more than 100 explorations consisting of test pits, soil borings, monitoring wells, test wells and piezometers within Starlight Park; geotechnical field and laboratory testing; and environmental field screening and analytical analyses.

The general subsurface profile includes the following strata in descending order: urban fill, MGP-era fill, organic soil, glacial deposits, and bedrock. The MGP-era fill, organic soil, and glacial deposits constitute subsurface soil. Subsurface profiles A and B are shown on Figure 4 and subsurface profiles C and D are shown on Figure 5. The locations of the profiles are shown on Figure 3.

5.1 Urban Fill

The urban fill stratum has been mapped as transported urban fill by the Natural Resources Conservation Service (NRCS). The urban fill has not been impacted by former MGP operations since it was placed over the former MGP surface after the MGP operations ceased. The urban fill was placed for construction of Starlight Park and filling of the former Bronx River channel. The stratum is laterally continuous across the site. The stratum thickness ranges from approximately 3 to 8 feet thick with an average thickness on the order of 5 feet. In the former Bronx River channel, 17 feet of urban fill was encountered in SB-21.

Urban fill predominantly consists of coarse-grained soil with some non-soil materials. The soil is widely- to narrowly-graded and the grain sizes include silt, fine to coarse sand, and fine to coarse gravel. The non-soil materials include brick, wood, wire, ash, coal, cinders, miscellaneous fill, boulders, etc. Test pits TP-9B, TP-9C, and TP-29 each contained massive blast rock that was imported to the site (i.e., blast rock was used to fill the former river channel). Part of the urban fill is capped with asphalt. The urban fill stratum is predominantly considered to be loose to medium dense based on SPT N-values, and likely includes undetected soft to very loose zones. The stratum color includes shades of black, brown, and gray.

5.2 MGP-Era Fill

MGP-era fill is present below the urban fill stratum. The stratum thickness typically ranges from 5 feet to 10 feet thick with a maximum thickness of 25 feet. The top of this stratum

likely represents the former ground surface during the operations of the MGP. The stratum is laterally continuous across the former MGP site.

MGP-era fill predominantly consists of coarse-grained soil with some non-soil materials. The soil is widely- to narrowly-graded and the grain sizes include silt, fine to coarse sand, and fine to coarse gravel. The non-soil materials include brick, wood, wire, ash, coal, slag, cinders, miscellaneous fill, rock fragments, etc. The MGP-era fill stratum is predominantly considered to be very loose to medium dense based on SPT N-values. The stratum color includes shades of black, brown, and gray.

5.3 Organic Soil

Organic soil is present below the MGP-era fill stratum. The stratum thickness typically ranges from 4 feet to 10 feet thick with a maximum thickness of 14 feet. Physical evidence of MGP residue and analytical results indicate that organic soil has been impacted by the former MGP operations. The organic soil stratum was encountered in approximately 67 percent of the logged explorations. The stratum is absent in the areas of the site in which the subsurface holders were constructed (i.e., the organic soil was likely excavated during holder construction) and within the former Bronx River channel.

The organic soil predominantly consists of freshwater tidal marsh deposits containing organic matter consisting of root mat, root fibers, and peat that are bonded by a matrix of fine sand, organic silt and clay. The organic soil stratum is predominantly considered to be very loose to soft based on SPT N-values. The stratum color includes shades of black and brown.

5.4 Glacial Deposits

Glacial deposits are present below the organic soil stratum. The glacial deposits include glacial till and glacial alluvial zones. The glacial till horizon is typically thin and underlies the glacial alluvial zones. Evidence of reworking of the glacial deposits (i.e., stratification) by fluvial processes was observed in split-barrel samples. The stratum thickness typically ranges from 4 feet to 12 feet thick with a maximum thickness of 20 feet. Physical evidence of MGP residue and analytical results indicate that glacial deposits have been impacted by the former MGP operations.

The glacial deposits stratum was encountered in approximately 55 percent of the logged explorations. The glacial deposit stratum is predominantly considered to be medium dense to very dense based on SPT N-values. The stratum color includes shades of brown and gray.

5.5 MGP Impacts on Subsurface Soil

VOCs, SVOCs, and metals were detected in subsurface soil samples at concentrations that exceed the Recommended Soil Cleanup Objectives. The samples exhibiting the highest SVOC concentrations and the greatest number of individual SVOCs that exceed Recommended Soil Cleanup Objective (RSCO) criteria were collected from on-site subsurface soils containing dense nonaqueous phase liquid (DNAPL) tar. The DNAPL tar is limited to discrete areas within the former MGP boundary, at depths ranging from 8 and 26 feet.

5.6 Bedrock

Bedrock consists predominantly of muscovite-biotite schist with some quartz-rich zones. This rock type is consistent with the lithology of the Hartland Formation. Bedrock was cored in 12 explorations and inferred in 38 explorations based on auger refusal, which was assumed to indicate bedrock.

The depth to the top of the bedrock surface ranged from approximately 16 feet to 39 feet, and 50 percent of the depths ranged from 25 feet to 31 feet. These depths correlate to elevations ranging from –5 feet to –28 feet. Bedrock outcrops are present southwest of the site across the Sheridan Expressway. Glacial and alluvial processes have shaped the bedrock surface. The bedrock surface north of the former Bronx River channel dips predominantly in a south-southeastern direction toward the former Bronx River channel. The bedrock surface south of the former Bronx River channel dips predominantly northwest toward the former Bronx River Channel.

The core recovery ranged from 88 to 100 percent (based on 5-core runs). Rock Quality Designation (RQD) measurements provide an indication of the fracture intensity. The RQD values ranged from 30 to 100 percent. The majority of the RQD values (8 of the 12 cores) are greater than 70 percent.

5.7 Groundwater

The depth to groundwater was measured in the test pits and wells. Based on 42 groundwater measurements, the depth to water ranges from 6½ to 14 feet with greater than 50 percent of the depth measurements ranging from 9 to 11 feet. These depths correlate to a groundwater surface ranging from elevation 3 (Bronx highway datum) to elevation –4 with greater than 50 percent of the groundwater elevations ranging from elevation 1.5 to -0.5 feet.

Groundwater samples collected from wells located in areas of MGP-impacted subsurface soil and hydraulically downgradient contained concentrations of VOCs and SVOCs above the

New York State Ambient Water Quality Standards (AWQS) for a GA Water Class. The DNAPL tar may represent a source for VOC and SVOC groundwater contamination. Cyanide was detected at a concentration above AWQS in wells MW-2D and MW-2D, located in an area of impacted subsurface soil, and in well MW-4S. Cyanide was not detected in groundwater samples collected from monitoring wells MW-3S, MW-3D, MW-4D, MW-6S, and MW-6D, which are located hydraulically downgradient.

5.8 MGP-Era Structures

Remnants of several MGP structures are present beneath the ground surface and were encountered in test pits and soil borings. Product piping and other conduits are likely present beneath the ground surface. MGP-era structures are shown on the historical conditions plan.

A concrete slab/footing was encountered at a depth of 3 feet in TP-1. The slab/footing was likely a part of the retort house. Test pits TP-2 and TP-3 uncovered a portion of the 75,000-cubic-foot subsurface holder rim at depths ranging from 4 to 5 feet. Test pit TP-4 uncovered a portion of the 60,000-cubic-foot (estimated) subsurface holder rim at a depth of approximately 8 feet. The holder rims are constructed of brick and are approximately 18 inches thick. A concrete slab was encountered at a depth of 4.6 feet in test pit TP-6 and a depth of 4.1 feet in TP-7. This slab was most likely the foundation for the former above-grade holder. Test pits TP-9C and TP-27A, excavated in the area of the former Bronx River channel, encountered a concrete slab and timbers most likely associated with the former river bulkhead that was part of the former MGP waterfront. The bulkhead was encountered at 5 feet in TP-9C and at 6 feet in TP-27A. A brick wall was uncovered at a depth of 4.7 to 7.4 feet in test pit TP-10. The wall is likely part of the purifying house. The top of a wall was uncovered at a depth of 5 feet in test pit TP-11. The wall is likely part of the naphtha tanks. A brick wall was uncovered at a depth of 5 to 12 feet in test pit TP-12A. This wall may be a retaining wall for the former river embayment. Test pits TP-16 and TP-28 uncovered a concrete slab at 4.5 feet and 5.4 feet, respectively. This slab is most likely the floor of the former storage building. Cast iron pipe, most likely associated with former MGP operations, was encountered at depths greater than 8 feet in test pits TP-13 and TP-14.

The bottom of the subsurface water-seal holders was encountered in SB-2, SB-2A, SB-4, and SB-4A. Borings SB-2 and SB-2A encountered the bottom of the 75,000-cubic-foot subsurface holder at depths of 16½ to 18 feet. Borings SB-4 and SB-4A encountered the bottom of the 60,000-cubic-foot (estimated) subsurface holder at a depth of 22 feet.

5.9 Tidal Fluctuations

River surface fluctuation due to tidal influences was measured to be on the order of 5½ to 6 feet below the weir and on the order of 4 to 5 feet above the weir. Tidal fluctuations above the weir are about 1 foot less than tidal fluctuations below the weir due to the weir maintaining a minimum river surface elevation. The tidal data from river gage RG-1 and RG-2 is included in Appendix D.

Water surface fluctuation due to tidal influences were measured to be on the order of ½ foot in MW-4S located approximately 20 feet west of the river and less than 0.1 foot in MW-2S located approximately 150 feet west of the river. Tidal fluctuations were not detected in MW-1S located approximately 300 feet west of the river (near the Sheridan Expressway). Water surface fluctuation due to tidal influences were measured to be on the order of 1½ foot in MW-4D and ½ foot in MW-1D. The tidal response times measured in the wells is very similar to tidal response times measured in the river gages.

TOC (mg/Kg)			
Total Organic Carbon	NA	NA	NA

Notes:

VOCs - Volatile Organic Compounds
SVOCs - Semivolatile Organic Compounds
J - estimated value
U - not detected to the reporting limit (organic analysis) and the method detection limit (inorganic analysis)
UJ - not detected and the limit shown is estimated
R - rejected value
NA - Not Analyzed
mg/kg is milligrams per kilogram
ND - Total concentration is listed as ND because no compounds were detected.
NE - Cleanup objective not established
Blue - Compound Detected in sample
Red - Concentration exceeds NYSDEC established cleanup criteria of 500 mg/kg for Total SVOCs and 10 mg/kg for Total VOCs

Subsurface Soil Sample Analytical Results Summary
Comparison to NYSDEC-Recommended Soil Cleanup Objectives
East 173rd Street Works
Bronx, New York

Notes:
Only those compounds detected are shown
mg/kg - milligram per kilogram
TBE - to be established
NE - cleanup objective not established
B - analyte detected in blank
U - not detected at the detection limit provided
J - estimated value below laboratory detection limit
R - sample rejected
Blue - compound detected in sample
Red - concentration exceeds NYSDEC-recommended cleanup objective
E - result exceeded calibration range of instrument, secondary dilution required
*EPA generic soil screening level (EPA, 1996a)

Notes:

Only those compounds detected are shown

NA - not analyzed

NE - cleanup objective not established

mg/kg - milligram per kilogram

U - not detected at the detection limit provided

J - estimated value below laboratory detection limit

B - analyte detected in blank

TBE - to be established

Blue - compound detected in sample

Red - concentration exceeds NYSDEC-recommended cleanup objective

R - sample rejected

C - composite sample

G - grab sample

EXCAVATION SUMMARY	
-1 ELEVATION	12,333 sf±
-5 ELEVATION	33,402 sf±
-4 ELEVATION	18,638 sf±
-10 ELEVATION	14,241 sf±
Total Area	78,614 sf±

COVER CUT SUMMARY	
West Cover Cut Deep	7,650 sf±
West Cover Cut Shallow	3,766 sf±
East Cover Cut Deep	7,493 sf±
East Cover Cut Shallow	2,088 sf±
South Cover Cut	73 sf±

SHEETING PERIMETER SUMMARY	
Total Sheeting	1,097 lf±
Cantilevered Sheeting	924 lf±
Tieback Sheeting (Minimum)	173 lf±

SIDEWALL TESTING SUMMARY	
-1 ELEVATION	7,617 sf±
-5 ELEVATION	3,822 sf±
-4 ELEVATION	8,068 sf±
Total Area	19,507 sf±

LEGEND:

- PROPOSED LOCAL DEEP EXCAVATION (See Excavation Notes)
- E 624676.39 N 303791.72 — EXCAVATION COORDINATE
- PROPOSED EXCAVATION TOP OF CUT SLOPE (APPROXIMATE)
- PROPOSED TOE OF COVER EXCAVATION SLOPE
- PROPOSED CANTILEVERED SHEET PILE (See Sheet Pile Notes)
- PROPOSED BRACED SHEET PILE (See Sheet Pile Notes)
- PROPOSED EXCAVATION SUB-AREA LIMITS
- EI = -11 — PROPOSED TARGET ELEVATION OF EXCAVATION BOTTOM WITHIN REMEDIAL EXCAVATION SUB-AREA (see soil management details)
- 4.0 — PROPOSED PRIMARY REMEDIAL COVER EXCAVATION GRADE (FEET)
- 4.2 — PROPOSED SECONDARY REMEDIAL COVER EXCAVATION GRADE (FEET)
- x7.0 — PROPOSED SPOT REMEDIAL COVER EXCAVATION GRADE (FEET)
- PROPOSED POST-EXCAVATION TESTING ZONE (excavation depth to be determined by bottom testing)
- SVOC >500 ppm, VOC >10 ppm, OR VISIBLE DNAPL TAR DETECTED IN EXPLORATION
- 1/16 — CROSS SECTION LOCATION AND SHEET NUMBER

EXCAVATION NOTES:

1. CONTRACTOR IS RESPONSIBLE FOR DESIGN OF ALL TEMPORARY EXCAVATION SUPPORT SYSTEMS AND DEWATERING SYSTEM(S).
2. TARGET ELEVATIONS INDICATE MINIMUM DEPTH OF EXCAVATION.
3. ACTUAL EXCAVATION LIMITS TO BE BASED ON OBSERVED FIELD CONDITIONS AND ANALYTICAL ANALYSIS OF BOTTOM CONFIRMATORY SAMPLES.
4. EXCAVATE TO DEPTHS/ELEVATIONS AS DIRECTED BY ENGINEER. EXCAVATION DEPTH MAY BE GREATER THAN THE TARGET ELEVATION. DEEPER TARGET ELEVATIONS IN THE VICINITY OF THE 60,000 CUBIC FOOT (ESTIMATED) GAS HOLDER AND MW-2D, PB-9, PB-23, AND PB26/26A.
5. IF CONFIRMATORY TEST RESULTS INDICATE SOIL HAS TOTAL SVOC <500 ppm, TOTAL VOC <10 ppm AND FREE OF VISIBLE DNAPL TAR, AND IF SOIL IS BELOW THE COVER (see restoration grading plan and details) EXCAVATION OF SOIL WITHIN THE POST-EXCAVATION TESTING ZONE IS NOT REQUIRED.
6. REMEDIAL EXCAVATION MAY BE PERFORMED IN PHASES, SO LONG AS THE ENTIRE REMEDIAL EXCAVATION IS PERFORMED (see soil management plan and details).
7. EXCAVATE TO THE TARGET ELEVATION VIA SLOPING OR SHORING (I.E. TRENCH BOX OR SLIDE RAIL EXCAVATION SUPPORT) IN THE VICINITY OF 60,000 CF GAS HOLDER, MW-2D, PB-9, PB-23, AND PB-26/26A SUCH THAT THE BOTTOM OF THE EXCAVATION SURROUNDS THE EXPLORATION AND HAS A SURFACE AREA OF 400 SQUARE FEET.
8. REMOVE GAS HOLDERS AND MGP-ERA REMNANTS (see demolition plan).
9. INSTALL SAFETY RAILING ALONG SHEET PILE EXCAVATION.
10. BACKFILL COVER EXCAVATION BACKSLOPE WITH CLEAN FILL OR URBAN FILL.
11. AS AN ALTERNATE TO SLOPING THE COVER EXCAVATIONS, SHEET PILE COULD BE INSTALLED AT HORIZONTAL LIMITS ASSOCIATED WITH THE TOP OF THE EXCAVATION SLOPE.

SHEET PILE NOTES:

1. ADJUST LIMITS OF BRACED SHEET PILES AS NECESSARY TO PERFORM REQUIRED EXCAVATION.
2. PRE-TRENCH TO CLEAR OBSTRUCTIONS FOR THE SHEET PILE INSTALLATION (see pre-trenching notes).
3. DRIVING SHEET PILE WITHIN FILL FOR FORMER BRONX RIVER CHANNEL MAY BE DIFFICULT DUE TO OBSTRUCTIONS. SHEET PILE ALIGNMENT IN FORMER BRONX RIVER CHANNEL MAY NEED TO BE ADJUSTED TO FOLLOW THE FORMER RIVER BANK. IF SHEET PILE ALIGNMENT IS ADJUSTED, OPEN CUTTING OUTSIDE THE SHEET PILING MAY BE REQUIRED.
4. THE AREA ENCLOSED BY THE SHEET PILES MAY BE SUBDIVIDED INTO SMALLER AREAS SO LONG AS THE ENTIRE REMEDIAL EXCAVATION IS PERFORMED. SUBDIVIDING MAY BE PERFORMED TO MINIMIZE THE QUANTITY OF GROUNDWATER THAT IS MANAGED, MINIMIZE THE QUANTITY OF SHEET PILE, FOR SOIL AND SITE MANAGEMENT, ETC.
5. WHERE ADEQUATE TOE EMBEDMENT CAN NOT BE ACHIEVED FOR CANTILEVERED WALL - INSTALL INTERNAL OR EXTERNAL BRACING (see pre-cut notes).
6. SEE EXCAVATION SUPPORT DESIGN CRITERIA AND SHEET PILE WALL PROFILE.
7. PROVIDE NEW OR CLEAN USED SHEET PILE.
8. REMOVE SHEET PILES AND DETENSION ANY TIEBACKS - SEE RESTORATION PLAN. REMOVE SHEET PILE USING THE SAME SIZE OR LARGER HAMMER USED FOR INSTALLATION.
9. SHEET PILE DRIVEN AS A PAIR SHALL BE ABLE TO BE SEPARATED TO SEAT EACH SHEET INDIVIDUALLY INTO BEDROCK.
10. SEAT BOTTOM OF SHEET PILES INTO BEDROCK USING REINFORCED DRIVING TIPS.
11. INSTALL TIEBACKS ON STARLIGHT PARK PROPERTY. OBTAIN EASEMENT IF TIEBACKS ARE REQUIRED TO EXTEND OUTSIDE THE PROJECT LIMITS.
12. DESIGN SHEET PILE TO ALLOW EXCAVATION TO BE EXTENDED A MINIMUM OF 2 FEET BELOW THE TARGET ELEVATION WITHOUT REDESIGN OR RECONSTRUCTION OF THE SHEET PILE WALL(S).

PRE-TRENCHING NOTES:

1. PRE-TRENCH TO A MINIMUM DEPTH OF 10-FEET, AND AS NECESSARY, TO CLEAR OBSTRUCTIONS FOR THE SHEET PILE INSTALLATION.
2. PRE-TRENCH THROUGH THE FILL TO NATIVE SOIL THROUGHOUT THE FORMER BRONX RIVER CHANNEL.
3. ENGINEER TO OBSERVE ALL PRE-TRENCHING TO VISUALLY VERIFY THE EXCAVATED SOIL IS FREE OF VISIBLE DNAPL TAR. ENGINEER TO ADJUST THE SHEET PILE LIMITS IF VISIBLE DNAPL TAR IS ENCOUNTERED.
4. BACKFILL PRE-TRENCH EXCAVATION WITH CLEAN FILL OR URBAN FILL.

PRE-CUT NOTES:

1. PERFORM PRE-CUTS OUTSIDE THE SHEET PILES AS NEEDED TO ACCOMMODATE CANTILEVER SHEET PILE DESIGN.
2. INSIDE COVER EXCAVATION AREAS, THE DEPTH OF PRE-CUT IS LIMITED TO THE DEPTH OF THE COVER EXCAVATION.
3. OUTSIDE COVER EXCAVATION AREAS, THE DEPTH OF PRE-CUT IS LIMITED TO 4 FEET OR THE DEPTH OF THE URBAN FILL, WHICHEVER IS LESS.
4. USE OF GREATER PRE-CUT DEPTHS MAY BE USED WITH APPROVAL BY CON EDISON AND ENGINEER.
5. BACKFILL PRE-CUT EXCAVATION WITH CLEAN FILL OR URBAN FILL.

EXCAVATION SURVEY NOTES:

1. SURVEY BOTTOM OF REMEDIAL EXCAVATION PRIOR TO BACKFILLING.
2. SURVEY BOTTOM OF COVER EXCAVATION PRIOR TO INSTALLING COVER.
3. COORDINATES FOR FORMER MGP BOUNDARY MAY NEED TO BE ADJUSTED BASED ON FIELD CONDITIONS.

OBSTRUCTION NOTES:

1. SEE SUBSURFACE DEMOLITION AND OBSTRUCTION PLAN AND HISTORICAL CONDITIONS PLAN.

DEWATERING NOTES:

1. INSTALL PERIMETER GROUNDWATER CUTOFF TO FULLY ENCLOSE EXCAVATION PRIOR TO EXCAVATION BELOW GROUNDWATER.
2. DRIVE SHEET PILE TO BEDROCK TO PROVIDE EFFECTIVE GROUNDWATER CUTOFF.
3. DEWATER REMEDIAL EXCAVATION USING DEEP WELLS WITHIN THE SHEET PILE GROUNDWATER CUTOFF. INSTALL SUFFICIENT WELLS TO EFFECTIVELY AND EFFICIENTLY DEWATER THE EXCAVATION WITHOUT REMOVING EXCESSIVE QUANTITIES OF WATER.
4. SEE DESIGN CRITERIA FOR DEWATERING.
5. REMOVE DEWATERING WELLS - SEE RESTORATION PLAN.
6. DEWATER COVER EXCAVATION AS NEEDED.
7. INSTALL PIEZOMETERS TO MEASURE GROUNDWATER DRAWDOWN WITHIN THE EXCAVATION AS REQUESTED BY CON EDISON AND ENGINEER.

RE: Dewatering at Con Edison – Starlight Park, 1041 E.172nd Street
Block #3019, Lot #'s 31, 36, 61, 100, Borough of the Bronx

Dear Mr. Glynn:

This is in response to your letter dated May 30, 2007, requesting permission to discharge up to 144,000 gallons per day (gpd) of groundwater, continuously for a period of six months (6) through an existing 10"dia. connection to the 10'-0" x 5'-1¼" combined sewer located by the Expressway ramp to Sheridan Expressway (North Bond) between East 172nd Street and 173rd Street in the Borough of the Bronx.

Based upon the information, schematic and analytical data submitted, you are hereby authorized to discharge up to 144,000 gallons (gpd) of groundwater as specified in your submission for a period of six months (6) to the 10'-0" x 5'-1¼" combined sewer at the above-mentioned location. The IPP Inspection and Permit Section has given you approval for this dewatering discharge by a letter dated May 3, 2006.

The discharger shall indemnify and hold the City harmless for any damage or liability incurred by the City due to the wastewater discharge and in the event that the discharge results in overloading the capacity of the discharge sewer. See copy of the special Indemnity Agreement attached, to be signed and filed with the discharge permit application.

Please note that this approval is not valid unless payment is made to the Bureau of Customer Service for groundwater discharge into the New York City Wastewater System in accordance with the Water and Wastewater Rate Schedule established by the New York Water Board.

If you have any further questions concerning this matter, please contact Suresh Kumar at (718) 595-5205.

Very truly yours,

Herbert M. Kass

NEW YORK STATE DEPARTMENT OF TRANSPORTATION
REGIONAL MAINTENANCE UNIT
PERMIT FOR WORK ON STATE OWNED PROPERTY

Permit #: **261130 – Exc.**

Permittee: **Consolidated Edison Company of New York, Inc.**
31-01 20th Avenue
Long Island City, NY 11105
c/o Richard Rienzo
(718) 204-4288

Contractor: **Sevenson Environmental Services, Inc.**
2749 Lockport Road
Niagara Falls, New York 14305
c/o Matthew Sceusa
cell: (716) 628-7908

Highway I.D.: **Arthur Sheridan Expressway (895I)**
Bronx County

Property Location: State owned Arthur Sheridan Expressway (895I) between E. 172nd Street and E. 174th Street

THIS PERMIT, was made **8** day **of March, 2007** between the Permittee and the Commissioner of Transportation For The People of the State of New York ("State").

WITNESSETH:

WHEREAS the State owns the arterial highway specified above and has an interest in any project affecting the State Arterial System Right-of-Way;

NOW, THEREFORE, the State hereby issues this permit to the Permittee, subject to the following conditions:
The property as identified above may be entered upon by the Permittee, its agents, employees, and contractors for the purpose of an installation of an excavation support system, with approximately twelve (12) tiebacks be installed in the direction of the State right-of-way, excavation and backfill operations; that are necessary in conjunction with the proposed remedial project in the Starlight Park area along the Arthur Sheridan Expressway; as shown in the drawings (22 sheets), dated June 5, 2006, prepared by GEI Consultants, revised sheet 15 of 22, dated 1/12/07, submitted to Mr. Bruk, P.E., NYSDOT, Region 11 Maintenance Unit, and for no other purpose whatsoever.

Permit Effective Dates: **March 10, 2007 through September 30, 2007**

No work shall be permitted after the above date unless authorized by the Regional Maintenance Engineer in writing. This permit may be revoked at any time for non compliance with permit conditions, public safety, emergencies or excessive project delays by the Permittee, its agents or employees.

This permit is not valid unless it is signed by both the NYS DOT Regional Maintenance Engineer and the authorized representative of the Permittee.

PERMIT 261130 –Exc.
CONSOLIDATED EDISON COMPANY OF NEW YORK, INC.
ARTHUR SHERIDAN EXPRESSWAY (895I)
BRONX COUNTY

GENERAL

(1) The Permittee shall obtain any and all necessary permits and approvals prior to working within State Right-of-Way. The Permittee shall not commence work on State property until this permit has been signed and dated by the Regional Maintenance Engineer. The Permittee shall keep a copy of this permit and copies of all other permits and approvals at the project site available for inspection at all times.

(2) The Permittee's contractor shall hold the State harmless against any claims resulting from work under this permit. The Permittee's contractor shall name the NYSDOT as additional insured on their commercial general liability policy ($2.0 mil per event) and provide a copy of this to the State prior to commencement of any work. The certificate of insurance shall be delivered to Lenny Bruk, Maintenance Unit, at 47-40 21st Street, Long Island City, NY 11101. (Provided)

(3) Upon receipt of any final notice of termination, the Permittee shall proceed promptly to terminate or cause to be terminated all project activities and contracts and to take such other action as may be required to restore any impacted roads to a safe condition.

(3.a) Upon completion of remedial activities on site, the Permittee shall be responsible for installing new fence in kind at the original location (about 400 ft of fence was temporary relocated per Permit # 261130-CLF).

(3.b) Upon completion of remedial activities on site, the Permittee shall be responsible for restoring and landscaping to the original condition the areas, where the Piezometers and Inclinometers were installed (Piezometers and Inclinometers were previously installed per Permit# 261130–P&I)

(4) This item is intentionally left blank.

(5) This item is intentionally left blank.

(6) The Permittee shall construct in accordance with the approved plans, these permit conditions and any and all applicable Federal, State and local regulations. Any work contracted out will also be constructed in accordance with the approved plans, these permit conditions and any and all applicable Federal, State and local regulations. All the work on the State Right-of-Way shall be done in accordance with NYS DOT Specifications.

(7) The Permittee hereby agrees to indemnify and hold harmless the State and New York City from any claim or loss including legal expenses by reason of the use or misuse of the equipment, that is installed under this permit, and/or from any claim or loss by reason of any accident or damage to any person or property, by the Permittee, its employees, or agents.

(8) Subsequent to the issuance of this permit, if there is any variance with the requirements of the approved contract plans or permit conditions, this variance shall be submitted to the NYSDOT for review prior to starting the work.

(9) This item is intentionally left blank.

PRIOR TO CONSTRUCTION

(10) The Permittee shall document the pre-construction condition of the entire project site with digital camera photographs and submit two separate sets to the State on diskette or CD format. These digital photos will help to insure adequate site restoration upon completion of all construction. Said photos shall be sent to the State prior to commencing work at the project site. Send to Lenny Bruk of the Maintenance Unit at 47-40 21st Street, Long Island City, NY 11101.

(11) The Permittee shall inform the State no less than three (3) days in advance of any activity at the project site. Call Lenny Bruk of the Maintenance Group at (718) 482-4516.

(12) The Permittee shall provide, at its own expense, a currently registered New York State Professional Engineer to supervise the construction. The Engineer will be the primary contact person for the State construction oversight personnel assigned to the project. NYSDOT should be notified of the person's name, telephone number, for contact on site as well as off site. Send this information to Lenny Bruk of the Maintenance Unit at 47-40 21st Street, Long Island City, NY 11101.

(12.a) The Permittee shall install a series of survey reference points (total of nine points) along the right edge of the Northbound

Arthur Sheridan Expressway, for measuring horizontal and vertical movement of the pavement (see sheet 15 of 22 referenced in the permit).

DURING CONSTRUCTION

(12.b) The Permittee shall record the observations using the installed inclinometers, piezometers and pavement monitoring points at the following frequencies, when performing the following activities:

ACTIVITY	FREQUENCY
Installation of Sheet Piles and Tiebacks	Twice a week
Excavation	Twice a week
Backfilling	Twice a week

(12.c) The Permittee shall report to the State the monitoring results on a monthly basis.

(12.d) The Permittee shall notify the State in the case of any of the following conditions:
I) Piezometer reading: when the water drawdown exceeds 0.5 Meter below baseline;
II) Inclinometer reading: when any movement is detected;
III) Pavement monitoring points: when any movement is detected.

(12.e) The notification shall be provided to Lenny Bruk, NYSDOT, at 47-40 21st Street, Long Island City, NY 11101. The notification shall be first provided by e-mail at lbruk@dot.state.ny.us, followed by a letter.

(12.f) If any damage to the roadway is noted, the Permittee shall be required to repair it according to the NYSDOT standards.

(13) The State may have its representatives present at the site for the purpose of monitoring construction work during critical phases. In the event that the State representative notes work at variance with the requirements of the contract documents or permit conditions, such matter will be brought to the attention of the Permittee's EIC or his duly authorized representative. The Permittee agrees to promptly correct any matters to the State's satisfaction. If the Permittee or its contractor is unresponsive, the State may choose to correct the problem by its forces. The Permittee will be billed for such event.

(14) The Permittee's EIC shall immediately notify the State if any problems are encountered during construction or if any revisions to the approved plans are necessary. The Permittee shall not make any revisions unless first approved by the State.

(15) This item is intentionally left blank.

(16) The Permittee's EIC shall continuously monitor the safety of the project site and immediately correct any unsafe condition. The State reserves the right to repair or correct an unsafe condition with its own forces if the Permittee or its contractor is unresponsive. The Permittee will be billed in such an event.

AFTER CONSTRUCTION

(17) The Permittee's EIC shall certify in writing that construction was completed in accordance with the approved plans and specifications and these permit conditions and will arrange a joint final inspection with the State.

(18) The Permittee shall restore all affected areas to current NYSDOT Standard Specifications.

(19) All permanent construction improvements to the affected site shall meet or exceed NYSDOT Standard Specifications for design criteria, materials and methods of construction.

(20) The Permittee shall document the post-construction condition of the entire project site with digital camera photographs and submit two separate sets to the State on diskette or CD format. Send to Lenny Bruk of the Maintenance Unit at 47-40 21st Street, Long Island City, NY 11101.

WHEREAS the State owns the arterial highway specified above and has an interest in any project affecting the State Arterial System Right-of-Way;

NOW, THEREFORE, the State hereby issues this permit to the Permittee, subject to the following conditions:
The property as identified above may be entered upon by the Permittee, its agents, employees, and contractors for the purpose of temporary installation of three (3) sets of Piezometers and Inclinometers; which are necessary for conducting monitoring actions, in conjunction with the proposed remedial project in the Starlight Park area along the Arthur Sheridan Expressway; as shown in the modified drawing 15 of 22, Geotechnical Instrumentation Plan and Details, provided with an email, dated 1/22/07, from Mr. Rienzo, Con Edison, to Mr. Bruk, P.E., NYSDOT, Region 11 Maintenance Unit, and for no other purpose whatsoever.

Permit Effective Dates: **February 26, 2007 through March 30, 2007**

No work shall be permitted after the above date unless authorized by the Regional Maintenance Engineer in writing. This permit may be revoked at any time for non compliance with permit conditions, public safety, emergencies or excessive project delays by the Permittee, its agents or employees.

This permit is not valid unless it is signed by both the NYS DOT Regional Maintenance Engineer and the authorized representative of the Permittee.

PERMIT 261130 - P&I
CONSOLIDATED EDISON COMPANY OF NEW YORK, INC.
ARTHUR SHERIDAN EXPRESSWAY (895I)
BRONX COUNTY

GENERAL

(1) The Permittee shall obtain any and all necessary permits and approvals prior to working within State Right-of-Way. The Permittee shall not commence work on State property until this permit has been signed and dated by the Regional Maintenance Engineer. The Permittee shall keep a copy of this permit and copies of all other permits and approvals at the project site available for inspection at all times.

(2) The Permittee's contractor shall hold the State harmless against any claims resulting from work under this permit. The Permittee's contractor shall name the NYSDOT as additional insured on their commercial general liability policy ($2.0 mil per event) and provide a copy of this to the State prior to commencement of any work. The certificate of insurance shall be delivered to Lenny Bruk, Maintenance Unit, at 47-40 21st Street, Long Island City, NY 11101. (Provided)

(3) Upon receipt of any final notice of termination, the Permittee shall proceed promptly to terminate or cause to be terminated all project activities and contracts and to take such other action as may be required to restore any impacted roads to a safe condition.

(3.a) Upon completion of remedial activities on site, the Permittee shall be responsible for landscape restoration of the area, of the installed Piezometers and Inclinometers, to the original condition.

(4) This item is intentionally left blank.

(5) This item is intentionally left blank.

(6) The Permittee shall construct in accordance with the approved plans, these permit conditions and any and all applicable Federal, State and local regulations. Any work contracted out will also be constructed in accordance with the approved plans, these permit conditions and any and all applicable Federal, State and local regulations. All the work on the State Right-of-Way shall be done in accordance with NYS DOT Specifications.

(7) The Permittee hereby agrees to indemnify and hold harmless the State and New York City from any claim or loss including legal expenses by reason of the use or misuse of the equipment, that is installed under this permit, and/or from any claim or loss by reason of any accident or damage to any person or property, by the Permittee, its employees, or agents.

(8) Subsequent to the issuance of this permit, if there is any variance with the requirements of the approved contract plans or permit conditions, this variance shall be submitted to the NYSDOT for review prior to starting the work.

(9) This item is intentionally left blank.

PRIOR TO CONSTRUCTION

(10) The Permittee shall document the pre-construction condition of the entire project site with digital camera photographs and submit two separate sets to the State on diskette or CD format. These digital photos will help to insure adequate site restoration upon completion of all construction. Said photos shall be sent to the State prior to commencing work at the project site. Send to Lenny Bruk of the Maintenance Unit at 47-40 21st Street, Long Island City, NY 11101.

(11) The Permittee shall inform the State no less than three (3) days in advance of any activity at the project site. Call Lenny Bruk of the Maintenance Group at (718) 482-4516.

(12) The Permittee shall provide, at its own expense, a currently registered New York State Professional Engineer to supervise the construction. The Engineer will be the primary contact person for the State construction oversight personnel assigned to the project. NYSDOT should be notified of the person's name, telephone number, for contact on site as well as off site. Send this information to Lenny Bruk of the Maintenance Unit at 47-40 21st Street, Long Island City, NY 11101.

DURING CONSTRUCTION

(13) The State may have its representatives present at the site for the purpose of monitoring construction work during critical phases. In the event that the State representative notes work at variance with the requirements of the contract documents or permit conditions, such matter will be brought to the attention of the Permittee's EIC or his duly authorized representative. The Permittee agrees to promptly correct any matters to the State's satisfaction. If the Permittee or its contractor is unresponsive, the State may choose to correct the problem by its forces. The Permittee will be billed for such event.

(14) The Permittee's EIC shall immediately notify the State if any problems are encountered during construction or if any revisions to the approved plans are necessary. The Permittee shall not make any revisions unless first approved by the State.

(15) This item is intentionally left blank.

(16) The Permittee's EIC shall continuously monitor the safety of the project site and immediately correct any unsafe condition. The State reserves the right to repair or correct an unsafe condition with its own forces if the Permittee or its contractor is unresponsive. The Permittee will be billed in such an event.

AFTER CONSTRUCTION

(17) The Permittee's EIC shall certify in writing that construction was completed in accordance with the approved plans and specifications and these permit conditions and will arrange a joint final inspection with the State.

(18) The Permittee shall restore all affected areas to current NYSDOT Standard Specifications.

(19) All permanent construction improvements to the affected site shall meet or exceed NYSDOT Standard Specifications for design criteria, materials and methods of construction.

(20) The Permittee shall document the post-construction condition of the entire project site with digital camera photographs and submit two separate sets to the State on diskette or CD format. Send to Lenny Bruk of the Maintenance Unit at 47-40 21st Street, Long Island City, NY 11101.

Highway I.D.: **Arthur Sheridan Expressway (895I)**
Bronx County

Property Location: State owned Arthur Sheridan Expressway (895I) between E. 172nd Street and E. 174th Street

THIS PERMIT, was made **19th** day **of December, 2006** between the Permittee and the Commissioner of Transportation For The People of the State of New York ("State").

WITNESSETH:

WHEREAS the State owns the arterial highway specified above and has an interest in any project affecting the State Arterial System Right-of-Way;

NOW, THEREFORE, the State hereby issues this permit to the Permittee, subject to the following conditions:
The property as identified above may be entered upon by the Permittee, its agents, employees, and contractors for the purpose of temporary relocation of approximately 400 Linear Feet of chain link fence (that is necessary with conjunction of the proposed remedial activities on site), as shown in the plans and described in the letter, dated November 30, 2006, provided with e-mail by Mr. Sceusa, Sevenson Environmental Services, Inc., to Mr. Bruk, P.E., NYSDOT, Region 11 Maintenance Unit, and for no other purpose whatsoever.

Permit Effective Dates: **December 19, 2006 through January 30, 2007**

No work shall be permitted after the above date unless authorized by the Regional Maintenance Engineer in writing. This permit may be revoked at any time for non compliance with permit conditions, public safety, emergencies or excessive project delays by the Permittee, its agents or employees.

This permit is not valid unless it is signed by both the NYS DOT Regional Maintenance Engineer and the authorized representative of the Permittee.

PERMIT 261130
CONSOLIDATED EDISON COMPANY OF NEW YORK, INC.
ARTHUR SHERIDAN EXPRESSWAY (895I)
BRONX COUNTY

GENERAL

(1) The Permittee shall obtain any and all necessary permits and approvals prior to working within State Right-of-Way. The Permittee shall not commence work on State property until this permit has been signed and dated by the Regional Maintenance Engineer. The Permittee shall keep a copy of this permit and copies of all other permits and approvals at the project site available for inspection at all times.

(2) The Permittee's contractor shall hold the State harmless against any claims resulting from work under this permit. The Permittee's contractor shall name the NYSDOT as additional insured on their commercial general liability policy ($2.0 mil per event) and provide a copy of this to the State prior to commencement of any work. The certificate of insurance shall be delivered to Lenny Bruk, Maintenance Unit, at 47-40 21st Street, Long Island City, NY 11101. (Provided)

(3) Upon receipt of any final notice of termination, the Permittee shall proceed promptly to terminate or cause to be terminated all project activities and contracts and to take such other action as may be required to restore any impacted roads to a safe condition.

(3a.) The Permittee shall be responsible for measuring and documenting the off-set distance from the existing fence to a back face of the existing concrete barrier, and providing the a copy of the documentation to the State.

(3.a) Upon completion of remedial activities on site, the Permittee shall be responsible for the installing new fence in kind to the original location.

(3.b) Upon completion of remedial activities on site, the Permittee shall be responsible for the landscape restoration to the original condition.

(4) This item is intentionally left blank.

(5) This item is intentionally left blank.

(6) The Permittee shall construct in accordance with the approved plans, these permit conditions and any and all applicable Federal, State and local regulations. Any work contracted out will also be constructed in accordance with the approved plans, these permit conditions and any and all applicable Federal, State and local regulations. All the work on the State Right-of-Way shall be done in accordance with NYS DOT Specifications.

(7) The Permittee hereby agrees to indemnify and hold harmless the State and New York City from any claim or loss including legal expenses by reason of the use or misuse of the equipment, that is installed under this permit, and/or from any claim or loss by reason of any accident or damage to any person or property, by the Permittee, its employees, or agents.

(8) Subsequent to the issuance of this permit, if there is any variance with the requirements of the approved contract plans or permit conditions, this variance shall be submitted to the NYSDOT for review prior to starting the work.

(9) This item is intentionally left blank.

PRIOR TO CONSTRUCTION

(10) The Permittee shall document the pre-construction condition of the entire project site with digital camera photographs and submit two separate sets to the State on diskette or CD format. These digital photos will help to insure adequate site restoration upon completion of all construction. Said photos shall be sent to the State prior to commencing work at the project site. Send to Lenny Bruk of the Maintenance Unit at 47-40 21st Street, Long Island City, NY 11101.

(11) The Permittee shall inform the State no less than three (3) days in advance of any activity at the project site. Call Lenny Bruk of the Maintenance Group at (718) 482-4516.

(12) The Permittee shall provide, at its own expense, a currently registered New York State Professional Engineer to serve as Engineer-in-Charge (EIC) who will supervise all construction. The EIC shall be an employee of the Permittee (not a consultant) and will be stationed at the project site. The EIC will be the primary contact person for the State construction oversight personnel assigned to the project.
NYSDOT should be notified of the person's name, telephone number, for contact on site as well as off site. Send this information to Lenny Bruk of the Maintenance Unit at 47-40 21st Street, Long Island City, NY 11101.

DURING CONSTRUCTION

(13) The State may have its representatives present at the site for the purpose of monitoring construction work during critical phases. In the event that the State representative notes work at variance with the requirements of the contract documents or permit conditions, such matter will be brought to the attention of the Permittee's EIC or his duly authorized representative. The Permittee agrees to promptly correct any matters to the State's satisfaction. If the Permittee or its contractor is unresponsive, the State may choose to correct the problem by its forces. The Permittee will be billed for such event.

(14) The Permittee's EIC shall immediately notify the State if any problems are encountered during construction or if any revisions to the approved plans are necessary. The Permittee shall not make any revisions unless first approved by the State.

(15) This item is intentionally left blank.

(16) The Permittee's EIC shall continuously monitor the safety of the project site and immediately correct any unsafe condition. The State reserves the right to repair or correct an unsafe condition with its own forces if the Permittee or its contractor is unresponsive. The Permittee will be billed in such an event.

AFTER CONSTRUCTION

(17) The Permittee's EIC shall certify in writing that construction was completed in accordance with the approved plans and specifications and these permit conditions and will arrange a joint final inspection with the State.

(18) The Permittee shall restore all affected areas to current NYSDOT Standard Specifications.

(19) All permanent construction improvements to the affected site shall meet or exceed NYSDOT Standard Specifications for design criteria, materials and methods of construction.

(20) The Permittee shall document the post-construction condition of the entire project site with digital camera photographs and submit two separate sets to the State on diskette or CD format. Send to Lenny Bruk of the Maintenance Unit at 47-40 21st Street, Long Island City, NY 11101.

Notes and Definitions

U	Analyte included in the analysis, but not detected
E-04	According to NELAP, pH analyses not performed within 15 minutes need to be reported as "over-aged."
DET	Analyte DETECTED
ND	Analyte NOT DETECTED at or above the reporting limit
NR	Not Reported
dry	Sample results reported on a dry weight basis
RPD	Relative Percent Difference

Notes and Definitions

U	Analyte included in the analysis, but not detected
DET	Analyte DETECTED
ND	Analyte NOT DETECTED at or above the reporting limit
NR	Not Reported
dry	Sample results reported on a dry weight basis
RPD	Relative Percent Difference

The results in this report apply to the samples analyzed in accordance with the chain of custody document. This analytical report must be reproduced in its entirety.

Air Monitoring Summary and Data

(Complete Data Set Provided Electronically)

Appendix L
Community Air Monitoring Plan Summary
East 173rd Street Works Former MGP Site (Starlight Park)
Bronx, New York

Date	Day	Time	Number of 15-minute TWA Exceedances	AMS Station	Exceedance Site Related	Source of Exceedance and Corrective Action Taken
PM10 Particulate Exceedance						
7-Apr-07	Saturday	Non-Working Hours	1	Station 6	No	Unexplained
9-Apr-07	Monday	Non-Working Hours	1	Station 2	No	Unexplained
12-Apr-07	Thursday	Working Hours	1	Station 6	No	Unexplained, equipment recalibrated.
22-Apr-07	Sunday	Non-Working Hours	1	Station 1	No	Unexplained
6-May-07	Sunday	Non-Working Hours	3	Station 4	No	Unexplained
6-May-07	Sunday	Non-Working Hours	1	Station 1	No	Unexplained
9-May-07	Wednesday	Working Hours	1	Station 1	Yes	Oversized material processing occurring vicinity of Station 1, established sprinkler and wind screen to reduce dust from operations.
10-May-07	Thursday	Working Hours	6	Station 1	Yes	Oversized material processing occurring vicinity of Station 1, continued sprinkler and wind screen to reduce dust from operations.
11-May-07	Friday	Working Hours	3	Station 1	Yes	Oversized material processing occurring vicinity of Station 1, continued sprinkler and wind screen to reduce dust from operations.
14-May-07	Monday	Working Hours	4	Station 5	No	Drilling operations occurring vicinity of Station 5; however, exceedances occurred during lunch break.
15-May-07	Tuesday	Working Hours	6	Station 1	Yes	Oversized material processing occurring vicinity of Station 1, continued sprinkler and wind screen to reduce dust from operations.
16-May-07	Wednesday	Working Hours	4	Station 1	Yes	Oversized material processing occurring vicinity of Station 1, continued sprinkler and wind screen to reduce dust from operations.
22-May-07	Tuesday	Working Hours	1	Station 6	No	Exceedance was the result of painting of E. 174st Street Bridge and pedestrian walkway located adjacent to the monitoring station.
23-May-07	Wednesday	Working Hours	2	Station 2	Yes	Movement of oversized materials near Station 2, stockpile watered to reduce dust.
31-May-07	Thursday	Working Hours	1	Station 5	No	Site being watered at time of exceedance, dust was generated by water hitting the ground.
4-Jun-07	Monday	Non-Working Hours	1	Station 6	No	Unexplained
6-Jun-07	Wednesday	Working Hours	1	Station 6	No	Maintenance work being performed on Sheridan Expressway approximately 10 feet from Station 6, no site work at time of exceedance.
8-Jun-07	Friday	Working Hours	1	Station 5	No	Grill being used on site in vicinity of Station 5
8-Jun-07	Friday	Non-Working Hours	10	Station 1	No	Unexplained
9-Jun-07	Saturday	Non-Working Hours	11	Station 1	No	Painting activities unrelated to remedial activities occurred adjacent to Station 1.
15-Jun-07	Friday	Working Hours	1	Station 2	Yes	SES moving rock in vicinity of Station 1, applied water to rock to reduce dust from operations.
17-Jun-07	Sunday	Non-Working Hours	3	Station 1	No	Unexplained
18-Jun-07	Monday	Working Hours	3	Station 1	Yes	Oversized material processing occurring vicinity of Station 1, applied water to reduce dust from operations.
19-Jun-07	Tuesday	Working Hours	1	Station 2	Yes	Equipment moving vicinity of Station 2, applied water to reduce dust from operations.
8-Jul-07	Sunday	Non-Working Hours	4	Station 6	No	Unexplained
9-Jul-07	Monday	Working Hours	22	Station 2	Yes	Crushing rock near Station 2, applied water to rock to reduce dust from operations.
10-Jul-07	Tuesday	Non-Working Hours	11	Station 4	No	Unexplained
10-Jul-07	Tuesday	Working Hours	3	Station 2	Yes	Crushing rock near Station 2, applied water to rock to reduce dust from operations.
11-Jul-07	Wednesday	Working Hours	2	Station 2	Yes	Crushing rock near Station 2, applied water to rock to reduce dust from operations.
13-Jul-07	Friday	Non-Working Hours	12	Station 4	No	Unexplained
13-Jul-07	Friday	Working Hours	1	Station 3	Yes	Refueling equipment at this time near Station 3.
13-Jul-07	Friday	Working Hours	2	Station 5	Yes	Equipment moving near Station 5, applied water to rock to reduce dust from operations.
6-Aug-07	Monday	Working Hours	1	Station 2	Yes	Crushing rock near Station 2, applied water to rock to reduce dust from operations.
7-Aug-07	Tuesday	Working Hours	8	Station 2	Yes	Crushing rock near Station 2, applied water to rock to reduce dust from operations.
8-Aug-07	Wednesday	Non-Working Hours	2	Station 2	No	Water found in GC inlet, Equipment Cleaned and recalibrated.
13-Aug-07	Monday	Non-Working Hours	1	Station 4	No	Unexplained
16-Aug-07	Thursday	Working Hours	1	Station 6	No	Operating a gasoline operated weed eater near station 6.
25-Aug-07	Saturday	Non-Working Hours	4	Station 2	No	Unexplained
27-Aug-07	Monday	Non-Working Hours	3	Station 5	No	Unexplained
28-Aug-07	Tuesday	Non-Working Hours	2	Station 5	No	Unexplained
28-Aug-07	Tuesday	Non-Working Hours	1	Station 2	No	Unexplained
30-Aug-07	Thursday	Working Hours	1	Station 2	Yes	Moving rock near, heavy vehicle traffic Station 2, applied water to rock and roadway to reduce dust from operations.
4-Sep-07	Tuesday	Working Hours	1	Station 2	Yes	Relocating rock near Station 2, applied water to rock to reduce dust from operations
4-Sep-07	Tuesday	Working Hours	1	Station 5	Yes	Stockpiling backfill material near Station 5, applied water to area to reduce dust from operations.
5-Sep-07	Wednesday	Working Hours	2	Station 2	Yes	Heavy truck traffic near Station 2, applied water to road to reduce dust from operations.
6-Sep-07	Thursday	Working Hours	3	Station 2	Yes	Heavy truck traffic near Station 2, applied water to road to reduce dust from operations.

Appendix L
Community Air Monitoring Plan Summary
East 173rd Street Works Former MGP Site (Starlight Park)
Bronx, New York

Date	Day	Time	Number of 15-minute TWA Exceedances	AMS Station	Exceedance Site Related	Source of Exceedance and Corrective Action Taken
11-Sep-07	Tuesday	Non-Working Hours	2	Station 2	No	Unexplained
12-Sep-07	Wednesday	Non-Working Hours	9	Station 2	No	Unexplained
24-Sep-07	Monday	Working Hours	1	Station 4	Yes	Street cleaning operations being conducted near station 4, applied water to road to reduce dust from operations.
26-Sep-07	Wednesday	Working Hours	1	Station 6	Yes	Removing holder near Station 6, applied water to rock to reduce dust from operations.
26-Sep-07	Wednesday	Working Hours	1	Station 1	Yes	Crushing rock near Station 2, applied water to rock to reduce dust from operations.
28-Sep-07	Friday	Working Hours	1	Station 2	Yes	Heavy truck traffic near Station 2, applied water to road to reduce dust from operations.
1-Oct-07	Monday	Working Hours	2	Station 2	Yes	Relocating rock stockpile near STA 2, applied water to road to reduce dust from operations.
2-Oct-07	Tuesday	Working Hours	2	Station 2	Yes	Utilizing gas powered equipment and downsizing rock near Station 2, applied water to road to reduce dust from operations.
3-Oct-07	Wednesday	Working Hours	2	Station 2	Yes	Heavy site traffic near Station 2, applied water to road to reduce dust from operations.
4-Oct-07	Thursday	Working Hours	1	Station 1	Yes	Relocating sheet piles near STA 1.
5-Oct-07	Friday	Working Hours	2	Station 4	Yes	Utilizing gas powered equipment near Station 4.
16-Oct-07	Tuesday	Working Hours	1	Station 4	No	Street cleaning operations being conducted near Station 4 applied water to road to reduce dust from operations.
18-Oct-07	Thursday	Working Hours	8	Station 1	Yes	Rock crushing activities and sheeting removal near Station 4, applied water to reduce dust from operations.
22-Oct-07	Monday	Working Hours	1	Station 2	Yes	Idling gas-powered vehicle near Station 2.
30-Oct-07	Tuesday	Working Hours	1	Station 4	Yes	Heavy truck traffic near Station 4 site entrance, applied water to road to reduce dust from operations.
2-Nov-07	Friday	Working Hours	1	Station 1	No	No work was being performed in the vicinity of either station during the exceedance.
2-Nov-07	Friday	Working Hours	1	Station 4	No	No work was being performed in the vicinity of either station during the exceedance.
7-Nov-07	Wednesday	Working Hours	1	Station 2	No	No work was being performed in the vicinity of the station during the exceedance.
8-Nov-07	Thursday	Working Hours	1	Station 4	Yes	Heavy site traffic entering and exiting the site near Station 4, dust depression was implemented.
12-Nov-07	Monday	Working Hours	3	Station 3	Yes	Removed sheet piles were being loaded near Station 4 for demobilization, dust suppression was implemented.
TVOC Exceedance						
9-Jun-07	Saturday	Non-Working Hours	5	Station 1	No	Painting activities unrelated to remedial activities occurred adjacent to Station 1.
16-Aug-07	Thursday	Working Hours	2	Station 6	Yes	Using a gasoline operated weed eater near station 6.
17-Sep-07	Monday	Working Hours	1	Station 4	Yes	Using a gasoline operated weed eater near station 4.
5-Oct-07	Friday	Working Hours	1	Station 4	Yes	Utilizing gas powered equipment near Station 4.

* Completed CAMP monitoring on November 14, 2007 after the completion of handling and disposal of MGP-impacted materials.
