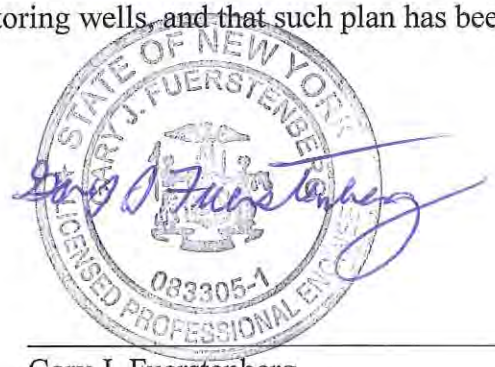
Gary J. Fuerstenberg, P.E.
Project Engineer



Professional Engineer's Certification

I, Gary J. Fuerstenberg, certify that I am currently a registered professional engineer, I had primary direct responsibility for the implementation of the subject remedial construction program, and I certify that the Remedial Plans and Specifications were implemented and that all remedial construction activities were completed in substantial conformance with the DER-approved Remedial Plans and Specifications any subsequent changes as agreed to and approved by the DER.

The data submitted to the DER demonstrates that the remediation requirements set forth in the Remedial Plans and Specifications and all applicable statutes and regulations have been or will be achieved in accordance with the time frames, if any, established in the work plan.

All use restrictions, institutional controls, engineering controls and operation and maintenance requirements applicable to the site are addressed in a comprehensive agreement by and between the remedial party and the City of New York which owns the site and operates it as a dedicated park. A copy of the fully-executed agreement between the remedial party and the City of New York has been submitted to the Department. The remedial plan approved for the Site by the Department does not require an environmental easement for the Site until it is sold by the City of New York.

A Site Management Plan has been submitted for the continual and proper operation, maintenance, and monitoring of any engineering controls employed at the site including the proper maintenance of any remaining monitoring wells, and that such plan has been approved by the DER.

1. Introduction

This Operable Unit 1 (OU-1) Remedial Action Report (RAR) presents a summary of the Remedial Action (RA) completed by Consolidated Edison Company of New York, Inc. (Con Edison) at the East 173rd Street Works former manufactured gas plant (MGP) site located in Bronx, New York (**Figure 1**). The RA was completed under the oversight of the New York State Department of Environmental Conservation (NYSDEC) in accordance with the NYSDEC-approved Remedial Action Work Plan (RAWP) dated August 24, 2004 and the final NYSDEC-approved Plans and Specifications.

1.1 Summary of Approved Remedy

As described in the NYSDEC-approved RAWP, the remediation requirements for OU-1 included excavation of impacted soils, installation of a clean cover, institutional controls and post-remediation groundwater monitoring.

Excavation of materials were required to meet the NYSDEC-approved cleanup criteria for the site. The NYSDEC required the removal of visible tar impacts and soil containing total volatile organic compound (TVOC) concentrations greater than 10 parts per million (ppm) or total semi-volatile organic compound (SVOC) concentration greater than 500 ppm. The NYSDEC allowed for reuse of site soils meeting the cleanup criteria as backfill at the site below the clean fill cover. The NYSDEC further required that a warning demarcation barrier be installed between the reused soils and the clean fill cover. The cover requirements included a 3-foot thick clean fill cover throughout the ball field proposed by the New York City Department of Parks and Recreation (NYCDPR) and a 6-foot thick clean fill cover outside the ball field proposed by the NYCDPR and inside the former MGP site footprint and inside the remedial excavation outside the former MGP footprint.

In addition to the above construction activities, the NYSDEC required that a Site Management Plan (SMP) be developed for the site including appropriate institutional controls and post remediation groundwater monitoring.

1.2 Site Description

The East 173rd Street former MGP site (the Site) is located between the Sheridan Expressway and the Bronx River in the neighborhood of West Farms, in the Borough of the Bronx, New York (**Figure 1**). The Site is defined as all land occupied by former MGP operations. The term "on site" refers to land within the boundary of the former MGP. The Site is approximately 3 acres in size and is located within the central portion of Starlight Park (approximately 8 acres), a part of the Bronx River Park. The Site pre-remediation was covered with approximately 40 inches to 80 inches of fill soil (urban fill) placed during park construction after the MGP was

decommissioned. The former MGP property boundary and the locations of MGP structures are shown on **Figure 2**. Starlight Park is currently owned by the City of New York and is operated by the New York City Department of Parks and Recreation.

1.3 Site History

The Site was owned by several Con Edison predecessor companies from 1859 to 1936. From 1936 to 1945, the Site was owned by Con Edison. Since 1945, the Site has been owned by the City of New York. Historic records confirm that an MGP operated at the Site between 1893 and 1912. However, based on gas franchise ownership records, MGP operation may have begun earlier. Subsequent records suggest that between 1912 and 1923, the facilities at the Site were used primarily for gas storage and as a standby plant. Sometime prior to 1943, the gas holders were taken down and the associated buildings were partially removed. The Site was used by Con Edison as a storage facility and garage until it was sold to the City of New York in December 1945. During the MGP operations, the Bronx River channel was located in its native channel adjacent to the southern side of the Site, as shown in **Figure 2**.

The last plant building was taken down in the 1950s by the City of New York. Starlight Park was reportedly constructed in the 1960s. During the 1960s, the Bronx River channel was moved to its current location south of the site and the Sheridan Expressway was constructed.

1.4 Summary of Remedial Investigations

Remedial investigations were conducted at the site from 2002 to 2004. A focused remedial investigation (FRI) was conducted at the Site between June and August 2002. Dense non-aqueous phase liquid (DNAPL) and MGP-impacted soils were observed in subsurface soils during the FRI. Based on the distribution of contaminants and the land use of the site, the FRI concluded that potential complete exposure pathways were present for maintenance workers and construction workers at the Site. The primary points of exposure were on-site subsurface soils at approximately 8 to 20 feet below ground surface (bgs). A complete description of the activities performed and analytical results is presented in the *Focused Remedial Investigation* report (GEI Consultants, Inc. [GEI], 2003).

Based on the findings of the FRI, the NYSDEC determined that remedial action was warranted at the Site. A supplemental remedial investigation (SRI) was conducted between November 2003 and February 2004. The SRI was primarily performed as a pre-construction investigation to refine the remediation limits and gather geotechnical data for the design of the remedy. Data from the SRI were originally presented in the *Supplemental Remedial Investigation Data Summary Report* (GEI, 2004a). A detailed description of both the FRI and SRI fieldwork, methods, data, and interpretations is included in the *OU-1 Data Report* (GEI, 2004c), which was included as Attachment B to the final Plans and Specifications.

1.5 Future Site Use

Starlight Park will be reconstructed by the New York State Department of Transportation (NYSDOT) and NYCDPR. The reconstructed park includes a vehicle parking area, boathouse, athletic fields, basketball court, volleyball court, picnic area, sanitation facilities, and walking paths. Buildings are not proposed within the remedial excavation or the former MGP site footprint. The majority of the remedial excavation and former MGP site footprint will be redeveloped as an artificial turf athletic field. The plan for renovation of Starlight Park also includes the installation of a subsurface stormwater drainage system for the Sheridan Expressway and separate drain systems for the park. The risk assessment took into consideration the future construction and use. The site was restored to the conditions required by the NYSDOT and NYCDPR to facilitate future park construction.

2. Summary of Remediation Requirements

As described in the NYSDEC-approved RAWP, the remediation requirements for OU-1 included excavation of impacted soils, installation of a clean cover, institutional controls and post-remediation groundwater monitoring. The remediation requirements were developed to meet the Site-specific remedial action objectives (RAOs) identified in the RAWP. These RAOs include:

- Eliminate, to the extent practical, the potential human health exposure of Starlight Park visitors and maintenance/construction workers to MGP-related contaminants
- Eliminate, to the extent practicable, potential impacts to the environment from MGP-related contaminates
- To the extent practicable, excavate and remove identified DNAPL and MGP-related contaminants

2.1 Site-Specific Cleanup Criteria

Based on the RAOs, Site-specific cleanup criteria were established for the site. The NYSDEC established the following criteria consistent with NYSDEC Technical and Administrative Guidance Memorandum 4046 (TAGM 4046): Determination of Soil Cleanup Objectives and Cleanup Levels.

- All visual tar impacts must be removal and disposed of off-site.
- All soil containing total VOC concentrations greater than 10 ppm or total SVOC concentrations greater than 500 ppm must be removed and disposed of off-site.
- Site soils meeting the cleanup criteria may be used as backfill at the site below a clean fill cover.
- A visual demarcation barrier will be installed between the reused site soils and imported clean fill.
- Imported clean fill placed above the visual demarcation barrier must meet all individual TAGM 4046 recommended soil cleanup objectives.

2.2 Post-Remedy Remedial Requirements

In addition to the Site-specific cleanup criteria identified above for use during excavation, the NYSDEC required the following post-remedy remedial requirements.

- Implementation institutional controls to prevent future exposure to materials below the demarcation barrier.

- Implementation of post-remediation groundwater monitoring program to evaluate the condition of the groundwater following removal of the MGP-impacted material.

2.2.1 Institutional Controls

The institutional controls include the following:

- Annual inspection and certification to confirm appropriate use of the Site, and to ensure that engineering and institutional controls included in the remedy are in place and remain effective to control the identified potential exposures.
- Worker notification to the NYSDEC and Con Edison prior to any action that could jeopardize the integrity of the remedy, including if utility or other excavation work below the soil cover is planned on the Site.
- A prohibition of land development for any use other than a park without prior written approval of the NYSDEC. Without such approval, only appropriate commercial, industrial, or recreational use will be allowed.
- A prohibition on the development of water supply or irrigation wells on the Site.
- Development and approval of a Site Management Plan.

2.2.2 Post-Remedial Monitoring

After the remedial excavation is completed, Con Edison will perform periodic groundwater sample collection from monitoring wells to confirm the improvement of groundwater quality.

The NYSDEC will determine when and if groundwater sampling will be discontinued at the Site. Con Edison will request NYSDEC approval to remove monitoring wells from the sampling program after the analytical results of three consecutive round of sampling confirm that the samples from the well do not contain MGP-related contaminants at concentrations that exceed New York State Ambient Water Quality Standards (AWQS) for Class GA Water established in the NYSDEC Division of Water Technical and Operational Guidance Series 1.1.1: Ambient Water Quality Standards and Guidance Values and Groundwater Effluent Limitations (TOGS 1.1.1) and Title 6 of the New York Codes, Rules, and Regulations Part 703 (6 NYCRR 703). After the first two years of monitoring, the groundwater quality data will be evaluated by the NYSDEC to determine scope and frequency of any additional future groundwater monitoring requirements.

3. Remedial Action Summary

The RA at the site consisted primarily of excavation and installation of a clean cover cap. The excavation work was further divided into two excavations; the remedial excavation and the cover excavation. The actual scope of the RA performed at the site was larger than presented in the RAWP. The following sections describe the work performed as part of the RA as well as the field observations and analytical results of confirmation samples which led to expansion of the RA. Photo documentation of the remedial action is presented in Appendix A.

3.1 Planned Excavation

The planned excavation for the RA was based on analytical and visual results of subsurface and surface soils collected during the FRI and SRI between 2002 and 2004. Soils from 34 test pits and more than 1,000 split-spoon samples were screened in the field for evidence of visible tar impacts. A total of 221 subsurface-soil samples were analyzed by a New York State Environmental Laboratory Approval Program (ELAP)-certified laboratory to identify locations where subsurface soils contained total SVOC concentrations greater than 500 ppm and/or total VOC concentrations greater than 10 ppm.

Based on this data, the excavation was planned to maximize the reuse of site soils that met the cleanup criteria. Specifically two types of soils were targeted for reuse.

- Urban fill. An approximately 5-foot thick layer of urban fill covered the site. This soil was placed for park construction after the MGP was decommissioned and met the cleanup criteria.
- Subsurface soils. Some of the MGP-era fill, or soil placed for MGP construction, and native subsurface soils meet the cleanup criteria. These soils were targeted for segregation, sampling, and reuse where possible.

In order to meet the remedial intent of the NYSDEC and the property owners, the backfill plan called for a layered backfill with the reusable subsurface soil and urban fill being placed in the excavation in the reverse order they were removed. The reusable subsurface soil would be placed first followed by the urban fill. This would then be covered with a demarcation barrier to identify the top of reused fill and a clean cover cap. The excavation was planned to remove approximately 50,500 cubic yards (CY) of soil from the excavation. This included approximately 18,500 CY of reusable urban fill. Based on the planned restoration of the site, an additional 10,000 CY of reusable subsurface soil would be required to restore the site to the bottom of the planned clean cover cap. The remaining 22,000 CY would be disposed of off-site at a properly licensed Con Edison approved disposal facility.

The planned excavation depths and limits are presented in Figure 3 overlaid with the actual excavation depths and limits completed during the RA.

3.2 Remedial Excavation

The remedial excavation refers to the excavations performed within the sheet pile limits where MGP impacts were identified. The remedial excavation encompassed an area of approximately 78,500 square feet (1.8 acres). The planned excavation bottom depth ranged from 12 to 21 feet (elevation -1 to -10 ft North American Vertical Datum [NAVD]), with localized deeper excavations to depths of up to 30 feet (elevation -19 ft NAVD), to remove known MGP remnants and soil that was not in compliance with the project cleanup criteria. The planned excavation elevations are depicted in Figure 3. The planned excavation included three areas where sufficient data was not available to accurately project an excavation depth. In these areas, the urban fill material would be removed and further excavation would be based on field observations and confirmation bottom sampling.

3.2.1 Vertical Excavation Limits

The limits of the actual remedial excavation are depicted on Figure 3. Excavations were completed to at least the planned bottom elevation with one exception. The localized excavation to -18 ft NAVD was completed to -17 ft NAVD due to the presence of bedrock. In the remaining areas of the site, excavations were completed to or exceeded the planned bottom elevations as depicted in Figure 3.

The vertical limits were based on analytical analysis of confirmatory samples obtained from the bottom of the excavation as shown in Figure 4. However, in several locations, the excavations extended deeper based on observations by Con Edison, GEI, and the NYSDEC representative. Excavations were extended deeper due to the presence of DNAPL or other visual impacts, or to accommodate safe excavation side slopes to remove adjacent soils.

Deeper excavations were conducted in the eastern portions of the remedial excavation due to observations of DNAPL at or just below a semi-confining clay layer. Once the DNAPL was observed, the excavation was extended deeper to the vertical extent and also expanded horizontally an area which had been completed and where a confirmation sample meeting the cleanup criteria had already been collected (SP-CSE10 and SP-CSC12E). Once the DNAPL was removed, an additional confirmation sample was collected to document the new bottom elevation in this area (SP-CS E10NE and SP-CSC12E2).

Additional soils were removed along the southern portions of the remedial excavation to accommodate safe excavation side slopes in this area. Excavations extended an additional 4 ft in this area to remove visually impacted soils. The planned excavation support and side slopes only supported excavations of an additional 2 ft in this area. To extend the excavations to the required depth, additional soils were removed from areas where confirmation samples meeting the

cleanup criteria had already been collected (SP-CSG09E and SP-CSF9S) to create a safe work zone. Additional confirmation samples were collected to document the new bottom elevations in these areas (SP-CSG09E2 and SP-CSF9S2).

3.2.2 Confirmation Sampling

Confirmation samples were collected on a 40-foot grid from the bottom of the excavation. Additional confirmation samples were collected along sidewalls and the bottom of localized deeper excavations and as directed by the NYSDEC in the field. Seventy-five confirmation samples were analyzed by an ELAP-certified laboratory for total VOCs via Environmental Protection Agency (EPA) Method 8260 and total SVOCs via EPA Method 8270 to confirm that the cleanup criteria were met. Confirmation samples were collected once the planned excavation limit was achieved provided that no visual impacts were observed in the bottom of the excavation. The results of the analytical samples are presented on Table 1. The confirmation sample locations and the total VOC and total SVOC concentrations are depicted in Figure 4. The validated laboratory Form 1's and data usability summary report is included in Appendix B.

Of the 75 samples collected, four samples from four locations did not meet the cleanup criteria. The locations and results are highlighted in Figure 4.

Sample ID:	Cleanup Criteria Exceeded	Action Taken
SP-CSH10SW	VOC	Additional soil was excavated from the sidewall at this location and an additional sample (SP-CSH10SW2) was collected and met the cleanup criteria.
SP-CSD11	VOC	At the direction of the NYSDEC, no further soil was removed from this area. DNAPL-impacted water that had pooled on top of this sample location was removed, the surface of the soil was removed and an additional sample (SP-CSD11-2) was collected and met the cleanup criteria.
SP-CSC10W	VOC	Additional soil was excavated from the excavation bottom at this location and an additional sample (SP-CSC10W2) was collected and met the cleanup criteria.
SP-CSC11W	VOC & SVOC	Additional soil was excavated from the excavation bottom at this location and an additional sample (SP-CSD10W2) was collected and met the cleanup criteria.

Confirmation samples were not collected from the sidewalls of the excavation where sheet piling was installed. The analytical results of samples collected from the pre-construction borings and presented in the OU-1 Data Report document the sidewall soil conditions.

3.2.3 MGP Remnant Removal

Several MGP remnant structures were removed during the remedial excavation. Structures encountered and removed consisted of building foundations wall and slabs; below-grade and at-grade gas holders, former Bronx River bulkheads, and miscellaneous plant infrastructure (i.e. historic utilities, pipes) associated with the MGP operations and other site development within the remedial excavation and cover excavation. All concrete and brick MGP structures were visually inspected and if no visual MGP contamination was present, the material was crushed on site and mixed with reusable subsurface material for use as backfill. Non-impacted materials which were not suitable for use as backfill were stockpiled, and transported off-site for disposal of at properly licensed, Con Edison-approved disposal facility.

Portions of two former MGP structures were left in place during the excavation. A portion of the former Retort House foundation was left in place below the West Cover Area Excavation. The portion of the foundation which extended into the remedial excavation was removed, but the section outside of the remedial excavation was left in place. The Contractor exposed the foundation for inspection by the NYSDEC representative. Based on the lack of impacts observed in the portion that was outside the remedial limits and the lack of impacts observed from the portion of the foundation removed within the remedial limits, the NYSDEC authorized leaving this portion of the structure in place.

A portion of the former 75,000 cubic foot (CF) gasholder was left in place outside of the remedial excavation. During the pre-trenching activities for the sheet pile excavation support system, the holder wall was encountered. A portion of the holder wall was exposed to confirm the orientation and extent of the holder outside the sheet pile line. The proximity of the extent of the holder wall to the Sheridan Expressway prevented re-design of the sheet pile support system to remove this structure. The NYSDEC authorized leaving the structure in place outside of the excavation limits based on the lack of impacted material in or below the holder within the excavation limits.

3.2.4 Excavation Support System

An excavation support system was installed to provide lateral support for the excavation and the adjacent Bronx River and Sheridan Expressway. The sheet pile excavation support system also served as a groundwater cutoff water to reduce the volume of groundwater entering the excavation. The excavation support system included both cantilevered and braced sections, depending on the excavation depth, subsurface conditions, and adjacent infrastructure. Sheet piles were installed to a depth of approximately 30 feet using a vibratory hammer and toed into the bedrock surface. A cutting shoe was welded to the bottom of each sheet prior to installation to ensure the sheet could be driven into the rock surface. The sheet piles were braced using internal and external deadmen anchors along the eastern boundary with the Bronx River and northern excavation boundary, respectively. Two to three levels of tieback anchors were installed along the western boundary with Sheridan Expressway. Following completion of the

excavation, the deadmen anchors were removed and the tieback anchors were de-tensioned and left in place.

Pre-trenching was conducted along the sheet pile alignment to remove potential obstructions along the sheet pile line. Blast rock was removed from the former Bronx River Channel, crushed on-site and reused as backfill. Along the northern side of the excavation, pre-cutting was performed to reduce the soil load on the sheet pile wall and maximize the use of cantilevered sheet pile. To maintain the sheet pile support system alignment in the vicinity of the former 75,000 CF gas holder, a caisson rig was used to core through the holder foundation wall and bottom. The core holes were backfilled with visually non-impacted native materials and clean imported fill. Sheet piles were then driven through the backfilled core holes and into the bedrock surface. A third row of tie backs was installed in this area to allow for the safe excavation of the portion of the gas holder located within the excavation limits. The final sheet pile support system plans are included in Appendix C.

3.2.5 Perimeter Groundwater Cutoff and Excavation Dewatering

A perimeter groundwater cutoff was necessary to excavate soil below the groundwater surface and maintain a stable excavation bottom. The sheet pile excavation support, serving as groundwater cutoff system, was installed as described in subsection 3.1.4 of this report. Interlocking steel sheet piles were used to provide effective groundwater cutoff. Deep wells were installed in the bedrock within and below the excavation to lower the water within the excavation and remove additional groundwater that leaked through the sheet pile joints or flowed up from the underlying bedrock. The dewatering wells were connected to header pipes which transported groundwater to the wastewater treatment facility. This allowed the majority of the excavation work to be performed in the dry and provided bottom stability. In limited areas, localized sumps were installed at the surface of the semi-confining clay layer to dewater excavations. Localized sumps were also used to remove stormwater from the excavations following rain events. During the remedial excavation, severe rain events halted excavation operations because the sumps and dewatering wells could not keep ahead of the rainwater and groundwater and due to permit limitations on the volume of groundwater that could be discharged on a daily basis. Localized sumps were also used in limited areas where the depths of the dewatering wells and depressions in the surface of the semi-confining clay layer prevented dewatering from the well points.

3.2.6 Geotechnical Instrumentation

Geotechnical instrumentation was required to monitor the excavation support system and to ensure that movement was within the design tolerances and would not result in damage to the adjacent infrastructure or lead to a failure of the excavation support system. A combination of inclinometers, piezometers, utility monitoring points, and pavement monitoring points were established and recorded throughout the project. A summary of the geotechnical data is presented in Appendix D.

Horizontal soil movement behind critical areas of the excavation support system were measured using three inclinometers installed between the sheet pile support system and the Sheridan Expressway. Horizontal action limits were established as +/- 0.75 inches. The inclinometers were measured twice before work began to establish a baseline and then twice weekly during excavation and backfilling activities. During the placement of the cover materials, the frequency was reduced to weekly. Fifty-five measuring events were conducted during the execution of the remedial action. All measurements were within the +/- 0.75 inch tolerance of the baseline. The data from each inclinometer is graphically summarized in Appendix D.

As required by the NYSDOT Permit 261130 P&I, vertical movement behind critical areas of the excavation support system were measured using three piezometers installed adjacent to the three inclinometers and pavement monitoring points established at the edge of the Sheriden Expressway. A groundwater level notification limit was established by the NYSDOT for the piezometers. Con Edison was required to notify the NYSDOT if more than 0.5 meters of drawdown below the seasonal low water table was measured in a piezometer or if there was any movement in the pavement monitoring points. The NYSDOT would then inspect the data and notify Con Edison if any changes to the work were required to prevent damage to the Sheridan Expressway. The piezometers and pavement monitoring points were measured twice before work began to establish a baseline and then twice weekly during excavation and backfilling activities. During the placement of the cover materials, the frequency was reduced to weekly.

Baseline measurements were collected in April 2007 prior to the start of excavation work. Spring water level measurements are typical of the seasonal high water table. As such, the measurement of drawdown against this seasonal high water table was a more conservative criteria than was required by the NYSDOT. Drawdown below the 0.5 meter notification limit did occur twice during the excavation activities.

- Between July 12 and July 31, 2007, measurements were greater than 0.5 meters below the baseline data at two of the three piezometers (P1 and P2). During that period excavation activity was being conducted against the sheet piles near the two piezometers. The groundwater levels returned to within 0.5 meters of the baseline on July 31, 2007. NYSDOT was notified and no further actions were required. During that period, there was no change to the pavement monitoring points.
- Between August 17 and October 10, 2007, measurements were greater than 0.5 meters below the baseline data at all three piezometers (P1, P2, and P3). At piezometer P3, the measurements fluctuated above and below the notification limit between September 5 and October 10, 2007. During that period excavation activity was being conducted against the sheet piles near and at the former holder. This period also corresponds to the seasonal low water table and a portion of the drawdown is the result of those seasonal changes. The groundwater levels returned to within 0.5 meters of the baseline on October 10, 2007. NYSDOT was notified and no further actions were required. During that period, there was no change to the pavement monitoring points.

The tabulated monitoring data as well as graphic representations of the groundwater levels in each piezometer and the elevations and locations of the pavement monitoring points is included in Appendix D.

3.3 Cover Excavations

Cover excavations outside the sheet pile limits (remedial excavation) were performed in areas that are within the former MGP footprint to accommodate the installation of the clean cover cap. Cover excavations are located adjacent to and east, south, and west of the remedial excavation as identified in Figure 3. No visually impacted materials were encountered during excavations. Confirmation sampling was not required in the cover excavation areas based on the analytical data collected during previous investigations.

The northern and southern horizontal limits of the cover excavations correspond to the horizontal limits of the MGP site footprint. The eastern and western limits of the cover excavations were based on practical limits for the adjacent Bronx River (i.e. to maintain a stable river bank) and the NYSDOT permit requirements for excavations adjacent to Sheridan Expressway (Interstate Highway 895). The western horizontal cover limit is the existing eastern sheet pile for the stormwater drainage system for the Sheridan Expressway.

The planned cover excavation bottom depth was achieved or exceeded at all locations. While excavating the west cover area, the foundation of the former retort house was encountered at the bottom depth of the cover excavation. At the direction of the NYSDEC, the surface of the foundation was exposed, inspected, and an excavator was used to break through and lift exposed sections of this foundation to confirm that no impacted materials were present on or below the slab. The portion of the foundation in the west cover area was left in place below the demarcation barrier.

3.4 Excavation and Backfill Sequencing

As stated above in subsection 3.1, the backfill plan called for a layered backfill with the reusable subsurface soil and urban fill being placed in the excavation in the reverse order they were removed. The pre-remediation subsurface profile within the remedial excavation, starting at the ground surface, generally consists of five distinct layers, urban fill, MGP-era fill, organic soil, glacial deposits, and bedrock. For the purposes of the remedial action and the discussion below, all soil below the urban fill was collectively referred to as subsurface soils.

The remedial action was performed according to the following general sequence:

The Contractor mobilized to the site on November 15, 2006. Site preparation activities were conducted including installation of construction privacy fencing, community air monitoring stations, erosion and sediment controls, wastewater treatment facility, and construction support

facilities from November 15 to December 21, 2006. On January 2, 2007, construction activities commenced.

The following subsections discuss the remedial action in terms of the major remedial or construction components, excavation support, dewatering, excavation, and backfill. Throughout the duration of the project, the Contractor maximized the available space on the site by sequencing multiple construction activities simultaneously. As such, the sequence of work discussed below is not linear, but overlaps as some activities were performed simultaneously.

3.4.1 Excavation Support System

In January 2007, pre-trenching activities to clear obstructions along the sheet pile alignment commenced. During this period, approximately 6,000 tons of oversized material (i.e. blast rock, boulders) was removed during pre-trenching activities. This material was crushed on site for use as backfill within the remedial excavation. During the pre-trenching activities for the sheet pile excavation support system in March 2007, the holder wall was encountered. A portion of the holder wall was exposed to confirm the orientation and extent of the holder outside the sheet pile line. The proximity of the extent of the holder wall to the Sheridan Expressway prevented re-design of the sheet piles to remove this structure. The NYSDEC authorized leaving the structure in place outside of the excavation limits based on the lack of impacted material in or below the holder within the excavation limits.

Installation of the sheet pile excavation support began in February 2007. To install sheet piles along the planned excavation limit in the vicinity of the holder, a caisson rig was mobilized to the site. A series of overlapping boreholes were advanced through the bottom of the holder to the bedrock surface. Each borehole was backfilled with visually non-impacted native materials and clean imported fill. This allowed sheet piles to be installed through the former holder and be driven to the bedrock surface. A third tier of anchors and tiebacks was required in this area to allow for the excavation and removal of the former holder within the excavation limits. Installation of the sheet pile wall was completed in April 2007. Installation of the anchors and tiebacks occurred during excavation as the depth of each tier was exposed. Installation of the anchors and tiebacks was completed in September 2007.

3.4.2 Dewatering and Groundwater Treatment

In January 2007, the Contractor commenced installation of a water treatment plant to treat liquid waste from dewatering and decontamination activities. In February 2007, a temporary structure was erected over the wastewater treatment plant to protect the equipment from adverse weather and low temperatures. Groundwater dewatering wells were installed between February and March 2007 within the excavation limits.

Limited dewatering was conducted within the pre-trenching limits in January and February 2007 to allow for observation of oversized materials which would prevent installation of the sheet pile

excavation support. Since the water treatment plant was not completed at the time of the excavations, the NYSDEC allowed the dewatered fluids to be pumped via an overland pipe to the center of the remedial excavation and discharged via a sump to infiltrate into the subsurface within the area to be excavated.

By March 28, 2007, the treatment plant and dewatering well network was operational; however, the approved dewatering application was not received until May 22, 2007. The initial permit allowed for the discharge of no more than 10,000 gallons of treated wastewater per day. A final permit was approved on June 8, 2007 for the discharge of no more than 144,000 gallons per day. The delays to the permit application were the result of the planned discharge point at the site. A manhole installed during previous work at the site was not properly documented by the previous contractor. As such, the New York City Department of Environmental Protection (NYCDEP) did not have a record of the connection and would not allow discharge to the point until a dye test and video inspection was conducted to confirm the integrity, construction, and connection of the pipe to the existing NYCDEP sanitary sewer system.

The water treatment plant operated until October 2007 treating and discharging 4,899,010 gallons of treated groundwater and decontamination liquids to the sanitary sewer system. In November 2007, the plant was dismantled, the equipment decontaminated, and the filter media and dewatering liquids were disposed of at an off-site disposal facility.

3.4.3 Excavation

In January 2007, the existing approximately 1,000 CY urban fill stockpile on the site was moved to an Urban Fill stockpile area located adjacent to the site northern boundary and urban fill stripping commenced. The urban fill was stripped, stockpiled and tested for on-site reuse as backfill. In many cases, the urban fill met the reuse criteria for chemical impacts, but failed the geotechnical criteria. A large volume of the urban fill contained concrete, asphalt, timbers, ash, trash, and other deleterious materials which were not acceptable as backfill. The Contractor established an on-site screening area within the excavation limits and began screening urban fill to remove the deleterious materials. The screened urban fill was then stockpiled in the Urban Fill stockpile and the deleterious materials were disposed of off-site as construction debris. Due to the sequencing of the excavation, urban fill stripping continued through September 2007. Of the 18,500 CY of urban fill initially slated for re-use, only approximately 14,000 CY was suitable for use as backfill below the demarcation barrier. The remaining 4,500 CY consisted of material which did not meet the reuse criteria and was disposed of off-site.

Subsurface soil excavation commenced on March 12, 2007. As described above, subsurface soil was considered potentially reusable if there was no visual contamination and corresponding stockpile testing results were below the cleanup criteria. The largest source of reusable subsurface soil was the MGP-era fill located immediately below the urban fill. Initially subsurface soils were excavated, stockpiled and tested for on-site reuse as backfill or segregated and tested for off-site disposal. Due to the small area available for stockpiling, the Contractor

identified areas of the site where significant volumes of materials that were either visually impacted or did not meet the reuse criteria based on investigation sampling. The Contractor pre-sampled these areas for off-site disposal criteria and direct loaded the subsurface soils for off-site disposal. This method included the removal and stockpile of the Urban Fill and the upper 3 to 4 feet of MGP era fill prior to direct load out. Using this method, a total of approximately 9,000 CY of impacted subsurface soils was removed and disposed of off-site. Approximately 4,000 CY of impacted subsurface soils was disposed from the eastern portion of the site in June 2007 and approximately 5,000 CY of impacted subsurface soils was disposed from the eastern portion of the site in August 2007. As discussed in subsection 3.1.2, the final bottom of the excavation was established based on confirmatory testing. All remedial excavation work was completed on September 28, 2007.

Analytical results of the re-use soils are presented in Table 4. Validated Form 1's and data usability reports are included in Appendix B.

3.4.4 Backfill

Backfill of the remedial excavation commenced on April 23, 2007. As described in subsection 3.1, the backfill plan called for a layered backfill with the reusable subsurface soil and urban fill being placed in the excavation in the reverse order they were removed. Reusable subsurface soils were re-used at depth within the excavation. Due to the additional volume of soil removed at depth and the lack of sufficient re-use subsurface materials, sufficient soils were not present for re-use below the demarcation barrier. Additional backfill below the demarcation barrier consisted of Base Recycled Material (BRM) from the Con Ed-approved Tilcon Bronx Recycle Facility. BRM is derived from clean broken concrete and rock generated from contamination free work sites. The material is accepted by the NYSDOT and the Port Authority of New York. Further, the recycling facility is regulated by the New York City Department of Sanitation and goes through annual permitting, which requires various testing of its raw and finished materials. All BRM material was sampled for and met the re-use criteria. The NYSDEC approved the use of BRM below the demarcation barrier on October 2, 2007 provided it was sampled at the same frequency as other imported materials. Backfill of all re-useable soils and imported BRM was completed by November 6, 2007. The results of analytical testing on imported backfill are included in Appendix E. Documentation of each truck load of clean fill brought to the site is included in Appendix F.

3.5 Remediation Cover System

A clean soil cover system was installed across the remedial excavation and cover excavations. The remediation cover system horizontal limits correspond to the former MGP site footprint and the portion of the remedial excavation outside of the former MGP footprint. The remediation cover has an area of approximately 109,000 square feet (2.5 acres).

The clean soil cover system includes a demarcation barrier and 3 to 6 feet of clean imported fill and/or topsoil placed on top of the reused materials to accommodate future park restoration. Additional topsoil, landscaping materials, synthetic turf, and/or pavement materials will be placed by NYSDOT and NYCDPR during final restoration of the park providing additional exposure reduction.

A warning demarcation barrier was installed below the imported clean fill to identify the top of reused fill. The barrier is an orange-colored high-visibility woven geotextile fabric with the printed warning "DANGER DO NOT DIG" in both English and Spanish. Installation of the demarcation barrier began on April 26, 2007, and was completed on November 6, 2007. Seven cross sections of the remedial excavation (A through G) are presented in Figures 5 and 6. The cross sections depict the elevation of the demarcation barrier.

The cover materials and thickness were based on future site use as provided by the NYSDOT and NYSDPR (Figure 7). The depth was based on the projected park use, particularly the proposed baseball fields. The proposed park grade was up to 4 feet lower than the existing grade at the site prior to remediation. The initial cover system consisted of the following:

Initial Proposed Cover System

	Inside Baseball Field Footprint	**Outside Baseball Field Footprint**
Inside Remedial Excavation	3 ft Clean Imported Fill Demarcation Barrier Minimum of 3 ft Clean Imported Fill or Reused Urban Fill	6 ft of Clean Imported Fill Demarcation Barrier Minimum of 1 ft Clean Imported Fill or Reused Urban Fill
Outside Remedial Excavation	3 ft Clean Imported Fill Demarcation Barrier	6 ft of Clean Imported Fill Demarcation Barrier

In April 2007, the NYSDOT indicated that a change had been made to the planned future use of the site. The initial plans called for grass baseball fields in the area of the remedial excavation. Subsequent to the start of the remedial activities, the final park plans were released. The revised plans called for the installation of a synthetic turf soccer field rather than the grass baseball fields. As a result of the revised plans, the backfill requirements for the remedial cover system changed. The clean fill required in the original plan did not meet the geotechnical criteria subbase requirements for the synthetic turf or the organic content for the areas outside of the proposed soccer field. The cover system was revised to provide a structural fill compacted to 95% modified proctor density below the planned synthetic turf and 6 feet of organic fill material in the areas outside of the athletic field. The elevation of the restoration grade was lowered to accommodate the drainage system installation below the synthetic turf. This resulted in the revised proposed park grade being up to 5 feet lower than the existing grade at the site prior to remediation. The revised cover system consisted of the following:

Revised Cover System

	Inside Soccer Field Footprint	Outside Soccer Field Footprint
Inside Remedial Excavation	3 ft Clean Structural Fill Demarcation Barrier Minimum of 3 ft Clean Imported Fill or Reused Urban Fill	6 ft of Clean Organic Fill Demarcation Barrier Minimum of 1 ft Clean Imported Fill or Reused Urban Fill
Outside Remedial Excavation	3 ft Clean Structural Fill Demarcation Barrier	6 ft of Clean Organic Fill Demarcation Barrier

The revised plan also called for a sub-turf drainage collection lateral along the western edge of the synthetic turf field. Portions of this lateral extended below the proposed depth of the cover system. The cover system was extended in these areas to provide a minimum of 1 foot of structural fill below the deepest depth of the proposed drainage lateral.

Placement of the cover materials started in May 2007 after the revised plans were received and was completed in November 2007.

Excavations for incidental remediation work (pre-cutting, pre-trenching, cover excavation backslope) were backfilled with clean fill.

3.6 Restoration

Site restoration activities includes all work performed to restore the site following construction. Sevenson Environmental Services, Inc. (SES) removed all of the sheet piles and geotechnical instrumentation and de-tensioned the soil anchors. The anchors were cut at the sheet pile and left in place as depicted on Figure 3. The site was rough graded to the remedial restoration grade, which is approximately 7 inches below the proposed park grade to allow for topsoil, landscaping materials, synthetic turf, drainage and pavement as part of the park reconstruction. At the edges of the excavation area, the cover was modified slightly to provide safe slopes between the original park grade and the restoration grade. In some areas, the park restoration grade was approximately 4.5 feet lower than the existing park grade.

Four monitoring wells were installed by the Contractor to replace those abandoned during the remedial excavation as required in the SMP (Figure 8). The monitoring well logs are included in Appendix G. The SMP was submitted to the NYSDEC prior to construction and approved pending final construction submittals.

3.7 Remedial Construction Oversight

Construction oversight was provided to ensure that the RAOs were met. Con Edison and the Engineer had full-time representatives on site to monitor the Contractor performance and ensure that all work was performed in accordance with the RAWP, Plans and Specifications. Con

Edison maintained construction health and safety personnel on site to monitor activities and prevent injuries. In addition, a NYSDEC representative was on site during most of the remedial action.

A thorough review of all Contractor submittals was completed by Con Edison and the Engineer to ensure compliance with the RAWP, Plans and Specifications. This included review of all excavation support designs, analytical results of disposal sampling, air monitoring data, borrow source evaluations, geotechnical laboratory testing for backfill, geotechnical instrumentation results, and quality control activities. All work completed as part of the remedial action was in compliance with the RAWP, Plans and Specifications.

4. Material Management

4.1 Soil and Construction Debris

The remedial excavation and cover excavations were performed in phases due to the relatively large quantity of soil excavation and the relatively small area available to stockpile excavated soil. Excavated subsurface soil was stockpiled in designated locations for sampling and analytical analysis.

A total of 19 analytical soil samples were collected from subsurface soil stockpiles, urban fill stockpiles, and during urban fill pre-characterization. These samples were submitted for on-site reuse characterization. The analytical results of the re-use sampling is presented in Table 4. All samples collected for re-use met the less than 10 ppm total VOCs and 500 ppm total SVOCs criteria. Twelve samples were collected from the estimated 18,500 CY of urban fill and seven samples were collected from approximately 14,000 CY of stockpiled subsurface, representing approximately 32,500 CY of reusable backfill. However, approximately 4,500 CY of the urban fill and subsurface materials, which contained timbers, asphalt, brick, trash, and other deleterious material, could not be used as backfill. As a result, only approximately 28,000 CY of reuse material was available for backfill.

A total of 47,450 tons of soil was transported off site for treatment and/or disposal. Materials were transported to five separate facilities based on receiving facility availability and the analytical results of waste sampling. Materials were disposed of as follows.

DISPOSAL FACILITY	LOCATION	FACILITY TYPE	TONS
Clean Earth of Philadelphia	South Philadelphia, PA	Thermal Desorption	24,181
ESMI, NJ	Keasbey, NJ	Thermal Desorption	16,460
ESMI, NY	Fort Edward, NY	Thermal Desorption	3,951
Clean Earth of New Castle, Inc.	New Castle, DE	Thermal Desorption	1,967
GROWS Landfill	Morrisville, PA	Landfill	889

A total of 934 tons of construction-related debris was transported off site to the GROWS landfill in Morrisville, Pennsylvania. This included timbers, asphalt, brick and other deleterious material that could not be crushed and used as backfill.

A summary table of the quantity of soil and construction debris removed from the site each day is presented in Appendix H. Appendix H also contains a CD with all waste manifests generated for materials transported off site to one of the five facilities. The analytical results of all waste disposal sampling are included in Appendix I.

The earthwork balance is presented in the following table. The proposed final grade for the park was less than the existing grade; therefore, approximately 7,000 CY less soil was estimated to backfill the excavation than was removed. However, due to several areas where over-excavation was necessary to remove impacted soils, a greater volume of soil was required to backfill the excavation than originally anticipated. Only subsurface soil that was in compliance with the project cleanup criteria was reused. The quantity of reused soil was less than estimated and the quantity of imported clean fill was greater than estimated.

	MATERIAL TYPE	In Place Cubic Yards		MATERIAL TYPE	In Place Cubic Yards
EXCAVATION	Excavation Total	~60,520	BACKFILL	Excavation Total	~60,520
	Urban Fill	~18,500		Reuse Urban Fill	(~14,000)
	Subsurface Soil	~42,020		Reuse Subsurface Soil	(~14,000)
	Off-Site Disposal-48,384 tons	~32,250		Reduction in Site Grade	(~7,000)
EST. REUSE SOIL		**~28,250**	**EST. IMPORTED FILL**		**~25,520**
AVAILABLE REUSE SOIL		**~28,000**	**ACTUAL IMPORTED FILL**		**~25,853**

4.2 Wastewater

Water from the remedial excavation, contingency soil management pad, debris pad, and stockpiles were treated at an on-site treatment plant prior to discharge to the New York City sanitary sewer. The system components were operated in accordance with a NYCDEP Permit No. #462031 included in Appendix J. The system was designed based on the estimated flow rate of 200 gallons per minute (gal/min) and the effluent discharge criteria. The system included fractionalization (settling or frac) tanks, sand filters, bag filters, carbon filters, and a holding tank. The waste water treatment plant (WWTP) began operation in May 2007 and ceased operations October 2007 when discharge under permit #462031 was completed. A total of 4,899,010 gallons of treated groundwater and decontamination liquids were discharged to the sanitary sewer system during the remedial action.

The analytical results of the effluent samples collected from the treatment system are included in Table 3. The laboratory analytical reports from SES are included in Appendix K.

5. Community Air Monitoring Summary

The New York State Department of Health (NYSDOH) Generic Community Air Monitoring Plan (CAMP) requires that during excavation at contaminated sites, real-time monitoring for TVOCs and particulates (i.e., dust) be conducted at the downwind perimeter of each designated work area. The purpose of the air-monitoring program was to ensure that the community and general public were not exposed to hazardous constituents at levels above accepted guidance limits provided in the NYSDOH CAMP. Monitoring of ambient air at the perimeter of the site was conducted by AirLogics, Inc., under contract to SES, in accordance with the NYSDEC-approved Air Monitoring Work Plan dated April 27, 2005. Six fixed air monitoring stations were established around the project perimeter. The stations provided real-time sampling to determine ambient air concentrations TVOC and respirable particulate matter (RPM_{10}). In addition, a meteorological station was established at the site to monitor and record weather conditions including wind speed and direction, temperature, and relative humidity in real time. The intent of the real-time monitoring program was to prevent and/or mitigate potential short-term emissions and off-site migration of Site-related VOCs and dusts by early detection in the field.

The stored analytical data along with system performance data from each station was sent in real-time, via radio telemetry, to a central computer system located in the project trailer for monitoring and analysis. In the event of an exceedance of a TVOC or respirable particulate matter sampling (PM-10) criteria downwind of the work zone, an air-monitoring contingency plan was established. The contingency plan outlined potential site control measures that would be implemented in response to elevated levels of target compounds or odor.

During the conduct of the remedial action, there were several short term exceedances of the PM10 criteria related to construction activities necessitating corrective measures. These were primarily intermittent exceedances which occurred downgradient of rock crushing or demolition activities, and adjacent to areas where excessive vehicle traffic generated dust. In each of these cases, appropriate dust suppression measures were taken.

There were only four short term exceedances of the TVOC criteria related not to construction work, but to emissions from hand-held gas-powered equipment operating adjacent to an air monitoring station or from street sweeping occurring along the Sheriden Expressway. No corrective measures were taken in each of these cases because the activity was completed within a 15 minute period.

A summary of the individual exceedances of each criteria and the corrective measures taken (if necessary), is included in Appendix L. A CD containing the air monitoring data for each station is also included in Appendix L.

6. Site Management Plan

The selected remedy relies on a set of site management procedures. A Draft SMP was prepared prior to the start of the RA construction. The Draft SMP was developed in accordance with the terms of the Voluntary Cleanup Agreement (VCA), NYSDEC-approved RAWP, the requirements contained in Section 2.6 of NYSDEC's Draft Voluntary Cleanup Program Guide, dated May 2002, and the guidance provided in Section 6 of the Draft Division of Environmental Remediation (DER)-10 Technical Guidance for Site Investigation and remediation, dated December 2002. The Draft SMP addressed how the remedial components of the site will be operated, maintained, and monitored after the RA is complete.

The Draft SMP was submitted to the NYSDEC for review in July 2005. The NYSDEC issued comments on the Draft SMP on December 1, 2005. A final access agreement was reached with the property owner on November 6, 2006 requiring additional changes to the SMP. The final Contractor submittals required for the SMP were received on June 25, 2008. All requested changes have been incorporated into the Site Management Plan which will be issued under separate cover.

Table 1
Confirmation Sample Analytical Results
East 173rd Street Works Former MGP Site (Starlight Park)
Bronx, New York

Notes:

NE- not established
ND - not detected; total concentration is listed as ND because no compounds were detected in the group
NA - not analyzed
J - estimated value
U - indicates not detected to the reporting limit for organic analysis and the method detection limit for inorganic analysis
UJ - Not detected at or above the reporting limit shown and the reporting limit is estimated
D - Results for dilution
B - Analyte detected in the associated method blank

Yellow shading and bolding indicates that the detected result value exceeds Total VOC level of 10 mg/kg, or Total SVOC level of 500 mg/kg.

Bolding indicates a detected result value
mg/kg - milligrams/kilogram or parts per million (ppm)
VOCs - volatile organic compounds
SVOCs - semivolatile organic compounds
Total VOCs & Total SVOCs are calculated using detects only.

Where samples exceeded the cleanup criteria, additional sampling was conducted following the additional removal actions as described in Section 3.2.2.
The following additional samples were collected to confirm the cleanup criteria was met:

SP-CSH10SW - additional sample SP-CSH10SW2
SP-CSD11 - additional sample SP-CSD11-2
SP-CSC10W - additional sample SP- CSC10W2
SP-CSC11W - additional sample SP- CSD10W2

Tetrachloroethene	1.0 U	--	--	1.0 U
Toluene	**1.4**	--	--	1.0 U
Trans-1,2-Dichloroethene	1.0 U	--	--	--
Trans-1,3-Dichloropropene	1.0 U	--	--	
Trichloroethene	1.0 U	--	--	--
Trichlorofluoromethane	1.0 U	--	--	--
Vinyl Chloride	1.0 U	--	--	--
1,2,4-Trichlorobenzene	1.0 U	--	--	--
m,p-Xylene	2.0 U	--	--	2.0 U
Methyl Tert-Butyl Ether	1.0 U	--	--	1.0 U
Naphthalene	1.0 U	--	--	1.0 U
o-Xylene	1.0 U	--	--	1.0 U
Metals via EPA 200 Series (mg/L)				
Cadmium	**0.001 U**	--	--	**0.001**
Copper	**0.018**	--	--	0.009 U
Lead	**0.020**	--	--	**0.019**
Nickel	**0.007**	--	--	**0.007**
Zinc	0.013 U	--	--	**0.025**
Mercury	0.0002 U	--	--	0.0002 U
Physical and Conventional Chemistry Parameters		**--**	**--**	
Ignitability by Flashpoint (deg F)	>200	--	--	>200
pH (pH Units)	**9.33**	--	--	**7.20**
Total Suspended Solids (mg/L)	**10.0 U**	--	--	**12.8**
Oil & Grease (mg/L)	**6.7**	--	--	--
Total Kjeldahl Nitrogen (mg/L)	**1.3**	--	--	--
Hexavalent Chromium (mg/L)	0.040 U	--	--	0.040 U
Chloride (mg/L)	--	**852**	--	**426**
Total Solids (mg/L)	--	**1710**	--	**1180**
Total Extractable Hydrocarbons (mg/L)	--	5.0 U	--	5.0 U
Phenols (mg/L)	--	0.005 U	--	0.005 U
Anions via EPA Method 300.1				
Nitrate as N (mg/L)	--	--	1.00 U	**1.70**
Nitrite as N (mg/L)	--	--	0.80 U	0.80 U

Notes:
ug/L - micrograms per liter
mg/L - miligrams per liter
deg F - degrees Fahrenheit
U - indicates not detected to the reporting limit for organic analysis and the method detection limit for inorganic analysis
Bolding indicates a detected result value

Table 4
Reuse Sample Analytical Results
East 173rd Street Works Former MGP Site (Starlight Park)
Bronx, New York

Notes:

NE- not established
ND - not detected; total concentration is listed as ND because no compounds were detected in the group
NA - not analyzed
J - estimated value
U - indicates not detected to the reporting limit for organic analysis and the method detection limit for inorganic analysis
UJ - Not detected at or above the reporting limit shown and the reporting limit is estimated
D - Results for dilution
B - Analyte detected in the associated method blank

Yellow shading and bolding indicates that the detected result value exceeds Total VOC level of 10 mg/kg, or Total SVOC level of 500 mg/kg.

Bolding indicates a detected result value
mg/kg - milligrams/kilogram or parts per million (ppm)
VOCs - volatile organic compounds
SVOCs - semivolatile organic compounds
Total VOCs & Total SVOCs are calculated using detects only.

Sample ID:	Cleanup Criteria Exceeded	Action Taken
SP-CSH10SW	VOC	Additional soil was excavated from the sidewall at this location and an additional sample (SP-CSH10SW2) was collected and met the cleanup criteria.
SP-CSD11	VOC	At the direction of the NYSDEC, no further soil was removed from this area. DNAPL impacted water that had pooled on top of this sample location was removed, the surface of the soil was removed and an additional sample (SP-CSD11-2) was collected and met the cleanup criteria.
SP-CSC10W	VOC	Additional soil was excavated from the excavation bottom at this location and an additional sample (SP- CSC10W2) was collected and met the cleanup criteria.
SP-CSC11W	VOC & SVOC	Additional soil was excavated from the excavation bottom at this location and an additional sample (SP- CSD10W2) was collected and met the cleanup criteria.

Confirmation and Reuse Soil Analytical Data (electronic only)

Data Usability Summary Report

Project: Con Edison East 173rd Street Works, Starlight Park
Laboratory: Chemtech, Mountainside, NJ
Report No.: Y1202
Reviewer: Lorie MacKinnon/GEI Consultants
Date: February 5, 2007

Samples Reviewed and Evaluation Summary

FIELD ID	LAB ID	FRACTIONS VALIDATED
SP-CS02	Y1202-01	VOC, SVOC
SP-CS01	Y1202-02	VOC, SVOC
Associated QC Samples:	Field Blanks:	None associated
	Field Duplicate pair:	None associated

The above-listed soil samples were collected on January 16, 2007 and were analyzed for volatile organic compounds (VOCs) by SW-846 method 8260B and semivolatile organic compounds (SVOCs) by SW-846 method 8270C. The data validation was based on the USEPA Region II Standard Operating Procedure (SOP) for the Validation of Organic Data Acquired using SW-846 Method 8260B, SOP No. HW-24, Revision 1, June 1999, USEPA Region II Standard Operating Procedure (SOP) for the Validation of Organic Data Acquired using SW-846 Method 8270C, SOP No. HW-22, Revision 2, June 2001 and the USEPA CLP National Functional Guidelines for Organic Review (January 2005).

The organic data were evaluated based on the following parameters:

*	•	Data Completeness
*	•	Holding Times and Sample Preservation
*	•	Gas Chromatography/Mass Spectrometry (GC/MS) Tunes
	•	Initial and Continuing Calibrations
*	•	Blanks
*	•	Surrogate Recoveries
	•	Matrix Spike/Matrix Spike Duplicate (MS/MSD) Results
	•	Internal Standards
	•	Laboratory Control Sample (LCS) Results
NA	•	Field Duplicate Results
*	•	Moisture Content
	•	Quantitation Limits and Data Assessment

- Sample Quantitation and Compound Identification

* - All criteria were met.

NA - A field duplicate pair was not associated with this sample group.

All results are usable for project objectives with the exception of select tentatively identified compounds (TICs) which were rejected due to method blank contamination or were reported as target compounds in another fraction.

Qualifications were not applied to the data as a result of sampling error. Qualifications applied to the data as a result of analytical error are discussed below.

VOC

- Potential uncertainty exists for select VOC results which were below the lowest calibration standard and quantitation limit. These results were qualified as estimated (J) in the associated samples by the laboratory. These results can be used for project objectives as estimated values which may have a minor impact on the data usability.

- The VOC tentatively identified compounds, naphthalene and 2-methylnaphthalene, reported in sample SP-CS02, were rejected (R) as they were reported as target compounds in the SVOC fraction.

- The positive and nondetect results for acetone in samples SP-CS01 and SP-CS02 were qualified as estimated (J/UJ) due to initial calibration nonconformances. The results can be used for project objectives as estimated values and nondetects with estimated quantitation limits. This qualification may have a minor impact on the data usability.

- The positive and nondetect results for acetone, carbon disulfide, methyl tert-butyl ether, methyl acetate, methylene chloride, 2-butanone, 1,2-dichloroethane, 4-methyl-2-pentanone, trans-1,3-dichloropropene, cis-1,3-dichloropropene, 1,1,2-trichloroethane, 2-hexanone, dibromochloromethane, 1,2-dibromoethane, bromoform, isopropylbenzene, 1,1,2,2-tetrachloroethane, and 1,2-dibromo-3-chloropropane in samples SP-CS01 and SP-CS02 were qualified as estimated (J/UJ) due to continuing calibration nonconformances. The direction of the bias cannot be determined from this nonconformance. The results can be used for project objectives as estimated values and nondetects with estimated quantitation limits. This qualification may have a minor impact on the data usability.

SVOC

- Potential uncertainty exists for select SVOC results which were below the lowest calibration

standard and quantitation limit. These results were qualified as estimated (J) in the associated samples by the laboratory. These results can be used for project objectives as estimated values which may have a minor impact on the data usability.

- Tentatively identified compounds (TICs), which were detected in samples at levels less than ten times those in the associated SVOC method blanks, were rejected (R).

- The nondetect results for benzaldehyde in samples SP-CS01 and SP-CS02 were qualified as estimated (UJ) due to initial calibration nonconformances. The results can be used for project objectives as nondetects with estimated quantitation limits. This qualification may have a minor impact on the data usability.

- The positive and nondetect results for 2,4-dinitrophenol, 4,6-dinitro-2-methylphenol, and indeno(123-cd)pyrene in sample SP-CS01 were qualified as estimated (J/UJ) due to low recoveries in the MS/MSD analyses. The results can be used for project objectives as estimated values and nondetects with estimated quantitation limits. This qualification may have a minor impact on the data usability.

- The positive and nondetect results for benzo(b)fluoranthene, benzo(k)fluoranthene, benzo(a)pyrene, dibenzo(ah)anthracene, and benzo(ghi)perylene were qualified as estimated (J/UJ) in sample SP-CS02 due to low internal standard areas. The results can be used for project objectives as estimated values and nondetects with estimated quantitation limits. This qualification may have a minor impact on the data usability.

The validation findings were based on the following information.

Data Completeness

The data package was complete as defined under the requirements for the NYSDEC ASP Category B deliverables for the VOC and SVOC analyses.

Holding Times and Sample Preservation

All criteria were met in the VOC and SVOC analyses.

GC/MS Tunes

All criteria were met in the VOC and SVOC analyses.

Initial and Continuing Calibrations

Compounds that did not meet criteria in the VOC and SVOC initial and continuing calibrations are summarized in the following tables.

Instrument ID MSVOAK Compound	IC 12/29/06	CC 01/18/07
acetone	X (r= 0.970)	XX (47.9%)
carbon disulfide		XX (20.4%)
methyl tert-butyl ether		XX (31.4%)
methyl acetate		XX (50.2%)
methylene chloride		XX (26.7%)
2-butanone		XX (47.3%)
1,2-dichloroethane		XX (27.9%)
4-methyl-2-pentanone		XX (50.1%)
trans-1,3-dichloropropene		XX (26.4%)
cis-1,3-dichloropropene		XX (20.1%)
1,1,2-trichloroethane		XX (31.5%)
2-hexanone		XX (53.8%)
dibromochloromethane		XX (25.8%)
1,2-dibromoethane		XX (33.5%)
bromoform		XX (24.1%)
isopropylbenzene		XX (24.7%)
1,1,2,2-tetrachloroethane		XX (26.4%)
1,2-dibromo-3-chloropropane		XX (42.3%)
Samples Affected	All samples	All samples

Instrument ID BNAB Compound	IC 01/03/07
benzaldehyde	X (r=0.973)

Instrument ID BNAB Compound	IC 01/03/07
2,4-dinitrophenol	X (16.8%)
Samples Affected	SP-CS01, SP-CS02RE

Instrument ID BNAE Compound	IC 01/03/07	CC 01/18/07
benzaldehyde	X (r=0.988)	XX (45.6%)
hexachlorocyclopentadiene	X (18.1%)	XX (33.0%)
2,4-dinitrophenol	X (32.5%)	
4,6-dinitro-2-methylphenol	X (16.9%)	
pentachlorophenol	X (15.1%)	
carbazole	X (21.4%)	XX (59.4%)
4-nitrophenol		XX (35.6%)
4-nitroaniline		XX (38.0%)
3,3'-dichlorobenzidine		XX (36.5%)
indeno(123-cd)pyrene		XX (33.1%)
benzo(ghi)perylene		XX (22.2%)
Samples Affected	SP-CS02	SP-CS02

X = Initial calibration (IC) relative standard deviation (%RSD) > 15%; Estimate (J) positive result only. If regression was performed and correlation coefficient (r) < 0.990; estimate (J/UJ) positive and nondetect results.

XX = Continuing calibration (CC) percent difference (%D) > 20; estimate (J/UJ) positive and nondetect results.

XXX = Continuing calibration (CC) percent difference (%D) > 90; estimate (J) positive results and reject (R) nondetect results.

+ = Response factor (RRF) < 0.05; Estimate (J) positive results and reject (R) nondetect results.

The positive and nondetect results for acetone and benzaldehyde in samples SP-CS01 and SP-CS02 were estimated (J/UJ) due to initial calibration nonconformances.

The following positive and nondetect results were estimated (J/UJ) due to continuing calibration nonconformances: acetone, carbon disulfide, methyl tert-butyl ether, methyl acetate, methylene chloride, 2-butanone, 1,2-dichloroethane, 4-methyl-2-pentanone, trans-1,3-dichloropropene, cis-1,3-

dichloropropene, 1,1,2-trichloroethane, 2-hexanone, dibromochloromethane, 1,2-dibromoethane, bromoform, isopropylbenzene, 1,1,2,2-tetrachloroethane, and 1,2-dibromo-3-chloropropane in samples SP-CS01 and SP-CS02.

Validation actions were not required for the affected SVOC compounds in sample SP-CS02 as the sample was reanalyzed due to poor internal standard results and the reanalysis was reported. Validation actions were not required for 2,4-dinitrophenol in sample SP-CS01 due to initial calibration nonconformances as the result was nondetect and positive results only were affected.

Blanks

Target compound contaminants were not detected in the VOC and SVOC method blanks.

Tentatively identified compounds (TICs) were detected in the SVOC method blank. TICs, which were detected in these samples at levels less than ten times those in the method blank, were rejected (R).

Surrogate Recoveries

All criteria were met in the VOC and SVOC analyses.

MS/MSD Results

The MS/MSD analyses were performed on a non-project sample for VOCs. Thirteen and 11 compounds were recovered below the control limits in MS and MSD, respectively. Validation action was not required on this basis.

The MS/MSD analyses were performed on sample SP-CS01 for SVOCs. The following table lists the recoveries and/or RPDs outside of control limits.

Compound	Recovery (%)	RPD (%)	Control Limits	Validation Actions
2,4-dinitrophenol 4,6-dinitro-2-methylphenol indeno(123-cd)pyrene	16, 14 20, 18 MS 40	- - -	26-131/50 40-105/50 42-124/50	Estimate (J/UJ) the positive and nondetect results for 2,4-dinitrophenol, 4,6-dinitro-2-methylphenol, and indeno(123-cd)pyrene in sample SP-CS01.
carbazole butylbenzyl phthalate	130, 125 MSD 125	- -	54-117/50 55-120/50	Validation actions were not required as the results were nondetect and therefore not affected by the potential high bias.

- Within control limits

Internal Standards

All criteria were met in the VOC analyses.

The following table lists the internal standard areas found outside of the control limits and the resultant actions in the SVOC analyses.

Sample	Internal Standard	Recovery (%)	Validation Actions
SP-CS02	chrysene-d12 perylene-d12	48.3 21.4	Validation actions were not required; results from the reanalysis were reported.
SP-CS02 RE	perylene-d12	45.8	Estimate (J/UJ) the positive and nondetect results for benzo(b)fluoranthene, benzo(k)fluoranthene, benzo(a)pyrene, dibenzo(ah)anthracene, and benzo(ghi)perylene.

LCS Results

All criteria were met in the VOC analyses.

The following table lists the compound recoveries found outside of the laboratory established control limits in the LCS analyses and the resultant actions in the SVOC analyses.

Compound	Recovery (%)	Control Limits	Associated Samples	Actions
4-nitrophenol carbazole	97 129	45-95 54-117	All samples	Validation actions were not required as results were nondetect and therefore not affected by the potential high bias.

Field Duplicate Results

A field duplicate pair was not associated with this sample group.

Quantitation Limits and Data Assessment

Results were reported which were below the lowest calibration standard level (RL) and above the method detection limit (MDL) in the VOC and SVOC analyses. These results were qualified by the laboratory (J). These results were qualified as estimated (J) due to uncertainty at the low end of calibration.

The following table lists the sample reanalyses which were performed and reported.

Sample	VOC Analysis Reported	SVOC Analysis Reported
SP-CS02	One gram of sample was used for analysis instead of the typical method amount of five grams. Reporting limits were elevated by a factor of five.	Samples were reanalyzed due to poor internal standard areas in the initial analysis. Results from the reanalysis were reported as IS areas were better. A 10-fold dilution was performed and reported due to the high level of naphthalene. Nondetect quantitation limits were elevated accordingly.
SP-CS01	One gram of sample was used for analysis instead of the typical method amount of five grams. Reporting limits were elevated by a factor of five.	NR

NR - Dilution or reanalysis was not required.

Sample Quantitation and Compound Identification

Calculations were spot-checked; no discrepancies were noted in the VOC and SVOC analyses.

The VOC tentatively identified compounds, naphthalene and 2-methylnaphthalene, reported in sample SP-CS02, were rejected (R). Semivolatile target compound list (TCL) compounds should not be reported as VOC TICs.

Sample Quantitation and Compound Identification

Calculations were spot-checked; no discrepancies were noted.

Data Usability Summary Report

Project: Con Edison East 173rd Street Works, Starlight Park
Laboratory: Chemtech, Mountainside, NJ
Report No.: Y2129
Reviewer: Lorie MacKinnon/GEI Consultants
Date: April 30, 2007

Samples Reviewed and Evaluation Summary

FIELD ID	LAB ID	FRACTIONS VALIDATED
SP-CS14	Y2129-01	VOC, SVOC
SP-CS13	Y2129-02	VOC, SVOC
SP-CS12	Y2129-03	VOC, SVOC
SP-CS11	Y2129-04	VOC, SVOC
SP-CS10	Y2129-05	VOC, SVOC
SP-CS09	Y2129-06	VOC, SVOC

SP-CS05	Y2129-10	VOC, SVOC
SP-CS04	Y2129-11	VOC, SVOC
SP-CS03	Y2129-12	VOC, SVOC
Associated QC Samples:	Field Blanks:	None associated
	Field Duplicate pair:	None associated

The above-listed soil samples were collected on March 30, 2007 and were analyzed for volatile organic compounds (VOCs) by SW-846 method 8260B and semivolatile organic compounds (SVOCs) by SW-846 method 8270C. The data validation was based on the USEPA Region II Standard Operating Procedure (SOP) for the Validation of Organic Data Acquired using SW-846 Method 8260B, SOP No. HW-24, Revision 1, June 1999, USEPA Region II Standard Operating Procedure (SOP) for the Validation of Organic Data Acquired using SW-846 Method 8270C, SOP No. HW-22, Revision 2, June 2001 and the USEPA CLP National Functional Guidelines for Organic Review (January 2005).

The organic data were evaluated based on the following parameters:

* • Data Completeness
* • Holding Times and Sample Preservation

*	•	Gas Chromatography/Mass Spectrometry (GC/MS) Tunes
	•	Initial and Continuing Calibrations
	•	Blanks
	•	Surrogate Recoveries
	•	Matrix Spike/Matrix Spike Duplicate (MS/MSD) Results
*	•	Internal Standards
	•	Laboratory Control Sample (LCS) Results
NA	•	Field Duplicate Results
*	•	Moisture Content
	•	Quantitation Limits and Data Assessment
	•	Sample Quantitation and Compound Identification

* - All criteria were met.

NA - A field duplicate pair was not associated with this sample group.

All results are usable for project objectives with the exception of select tentatively identified compounds (TICs) which were rejected due to method blank contamination.

Qualifications were not applied to the data as a result of sampling error. Qualifications applied to the data as a result of analytical error are discussed below.

VOC

- Potential uncertainty exists for select VOC results which were below the lowest calibration standard and quantitation limit. These results were qualified as estimated (J) in the associated samples by the laboratory. These results can be used for project objectives as estimated values which may have a minor impact on the data usability.

- The positive results for methylene chloride in samples SP-CS14, SP-CS13, SP-CS11, SP-CS09, SP-CS08, SP-CS06, SP-CS05, SP-CS04, and SP-CS03 and acetone in samples SP-CS13, SP-CS12, SP-CS11, SP-CS10, SP-CS07, SP-CS06, SP-CS05, SP-CS04, and SP-CS03 were qualified as nondetect (U) at the reporting limit due to method blank contamination. The results can be used for project objectives as nondetects. This qualification may have a minor impact on the data usability.

- The positive results for methylene chloride in samples SP-CS10 and SP-CS07 were qualified as nondetect (U) at the reported values due to method blank contamination. The results can be used for project objectives as nondetects with elevated quantitation limits. This qualification may have a minor impact on the data usability.

- The nondetect results for methyl acetate and acetone in all samples were qualified as

estimated (UJ) due to initial calibration nonconformances. The results can be used for project objectives as nondetects with estimated quantitation limits. This qualification may have a minor impact on the data usability.

- The positive and nondetect results for chloromethane, chloroethane, trichlorofluoromethane, methyl acetate, and acetone in samples SP-CS14, SP-CS13, SP-CS12, SP-CS09, SP-CS08, and SP-CS06 and chloroethane, methylene chloride, and tetrachloroethene in samples SP-CS11, SP-CS10, SP-CS07, SP-CS05, SP-CS04, and SP-CS03 were qualified as estimated (J/UJ) due to continuing calibration nonconformances. The direction of the bias cannot be determined from this nonconformance. The results can be used for project objectives as estimated values and nondetects with estimated quantitation limits. This qualification may have a minor impact on the data usability.

- The positive and nondetect VOC results for sample SP-CS05 were qualified as estimated (J/UJ) due to low surrogate recoveries. The results can be used for project objectives as estimated values and nondetects with estimated quantitation limits and may be biased low. This qualification may have a minor impact on the data usability.

- The blank-qualified nondetect results for methylene chloride in samples SP-CS10 and SP-CS07 were qualified as estimated (UJ) due to high recoveries in the LCS analyses. The results can be used for project objectives as nondetects with estimated quantitation limits. This qualification may have a minor impact on the data usability.

SVOC

- Potential uncertainty exists for select SVOC results which were below the lowest calibration standard and quantitation limit. These results were qualified as estimated (J) in the associated samples by the laboratory. These results can be used for project objectives as estimated values which may have a minor impact on the data usability.

- Tentatively identified compounds (TICs), which were detected in samples at levels less than ten times those in the associated SVOC method blanks, were rejected (R).

- The positive results for acenaphthylene, fluoranthene, pyrene, benzo(a)anthracene, chrysene, benzo(b)fluoranthene, and benzo(a)pyrene in sample SP-CS10 were qualified as estimated (J) due to high recoveries in the MS/MSD analyses. The results can be used for project objectives as estimated values. This qualification may have a minor impact on the data usability.

- The nondetect results for 3,3'-dichlorobenzidine, 2,4-dinitrophenol, 4,6-dinitro-2-methylphenol, and dibenzo(ah)anthracene in sample SP-CS10 were qualified as estimated

(UJ) due to low recoveries in the MS/MSD analyses. The results can be used for project objectives as nondetects with estimated quantitation limits. This qualification may have a minor impact on the data usability.

- The nondetect results for 3-nitroaniline and 3,3'-dichlorobenzidine in all samples were qualified as estimated (UJ) due to low recoveries in the LCS analyses. The results can be used for project objectives as nondetects with estimated quantitation limits. This qualification may have a minor impact on the data usability.

The validation findings were based on the following information.

Data Completeness

The data package was complete as defined under the requirements for the NYSDEC ASP Category B deliverables for the VOC and SVOC analyses.

Holding Times and Sample Preservation

All criteria were met in the VOC and SVOC analyses.

GC/MS Tunes

All criteria were met in the VOC and SVOC analyses.

Initial and Continuing Calibrations

Compounds that did not meet criteria in the VOC and SVOC initial and continuing calibrations are summarized in the following tables.

Instrument ID MSVOAK Compound	IC 03/27/07	CC 04/02/07	CC 04/03/07
acetone	X (r= 0.981)	XX (22.6%)

Samples Affected	SP-CS04DL	SP-CS04DL

X = Initial calibration (IC) relative standard deviation (%RSD) > 15%; Estimate (J) positive result only. If regression was performed and correlation coefficient (r) < 0.990; estimate (J/UJ) positive and nondetect results.

XX = Continuing calibration (CC) percent difference (%D) > 20; estimate (J/UJ) positive and nondetect results.

XXX = Continuing calibration (CC) percent difference (%D) > 90; estimate (J) positive results and reject (R) nondetect results.

+ = Response factor (RRF) < 0.05; Estimate (J) positive results and reject (R) nondetect results.

The nondetect results for methyl acetate and acetone in all samples were estimated (UJ) due to initial calibration nonconformances.

The following positive and nondetect results were estimated (J/UJ) due to continuing calibration nonconformances: chloromethane, chloroethane, trichlorofluoromethane, methyl acetate, and acetone in samples SP-CS14, SP-CS13, SP-CS12, SP-CS09, SP-CS08, and SP-CS06 and chloroethane, methylene chloride, and tetrachloroethene in samples SP-CS11, SP-CS10, SP-CS07, SP-CS05, SP-CS04, and SP-CS03.

Validation actions were not required for benzaldehyde and 2,2'-oxybis(1-chloropropane) in sample SP-CS04DL due to initial and continuing calibration nonconformances as these results were not

reported from the diluted analyses.

Blanks

Target compound contaminants were not detected in the SVOC method blanks.

The following table summarizes the VOC method blank contamination.

Compound	Type of Blank	Associated Samples	Maximum Concentration *	Blank Action Level
acetone	Method	All samples	7.5 ug/L	75 ug/L
methylene chloride	Method	All samples	30.3 ug/L	303 ug/L

* Due to the difference in sample weight of the method blank (5 gram) versus the sample analysis weight (1 gram), the raw data results were compared.

Blank Actions

If the sample concentration $\leq$ RL and $\leq$ blank action level, qualify the result as not detected (U) at the RL.
If the sample concentration > RL and $\leq$ blank action level, qualify the result as not detected (U) at the reported value.
If the sample concentration > blank action level, report the value unqualified.

Based on the action levels determined, the positive results for methylene chloride in samples SP-CS14, SP-CS13, SP-CS11, SP-CS09, SP-CS08, SP-CS06, SP-CS05, SP-CS04, and SP-CS03 and acetone in samples SP-CS13, SP-CS12, SP-CS11, SP-CS10, SP-CS07, SP-CS06, SP-CS05, SP-CS04, and SP-CS03 were qualified as nondetect (U) at the reporting limit due to method blank contamination.

Based on the action levels determined, the positive results for methylene chloride in samples SP-CS10 and SP-CS07 were qualified as nondetect (U) at the reported value due to method blank contamination.

Tentatively identified compounds (TICs) were detected in the SVOC method blank. TICs, which were detected in these samples at levels less than ten times those in the method blank, were rejected (R).

Surrogate Recoveries

All criteria were met in the SVOC analyses.

The following table summarizes the surrogate recoveries that failed to meet the acceptance criteria in the VOC analyses performed:

Sample ID	Percent Recovery				Action
	DBFM 75-125	DCE 75-125	TOL 75-125	BFB 75-125	
SP-CS05	-	71%	-	71%	Estimate (J/UJ) the positive and nondetect results in sample SP-CS05.
SP-CS05 RE	-	-	-	72%	Validation action was not required as the reanalysis results were not reported.

- Recovery within limits.

MS/MSD Results

The MS/MSD analyses were performed on sample SP-CS10 for VOC and SVOCs. The following table lists the recoveries and/or RPDs outside of control limits.

Compound	Recovery (%)	RPD (%)	Control Limits	Validation Actions
methyl acetate tetrachloroethene	158, 155 148, 148	- -	37-150/20 68-148/20	Validation actions were not required as the results were nondetect and therefore not affected by the potential high bias.
3,3'-dichlorobenzidine	MS 28	-	31-111/50	Estimate (UJ) the nondetect result for 3,3'-dichlorobenzidine in sample SP-CS10.
acenaphthylene fluoranthene pyrene benzo(a)anthracene chrysene benzo(b)fluoranthene benzo(a)pyrene	108, 108 221, 205 268, 237 137, 126 184, 179 189, 195 147, 126	- - - - - - -	52-107/50 55-105/50 20-150/50 60-100/50 51-115/50 42-126/50 58-102/50	Estimate (J) the results for acenaphthylene, fluoranthene, pyrene, benzo(a)anthracene, chrysene, benzo(b)fluoranthene, and benzo(a)pyrene in sample SP-CS10.
2,4-dinitrophenol 4,6-dinitro-2-methylphenol dibenz(ah)anthracene	0, 0 0, 0 0, 0	- - -	26-131/50 40-105/50 41-130/50	As the sample was analyzed at a five-fold dilution, professional judgement was taken to estimate (UJ), rather than reject, the nondetect results for 2,4-dinitrophenol, 4,6-dinitro-2-methylphenol, and dibenzo(ah)anthracene in sample SP-CS10.

- Within control limits

Internal Standards

All criteria were met in the VOC and SVOC analyses.

LCS Results

The following table lists the compound recoveries found outside of the laboratory established control limits in the LCS analyses and the resultant actions in the VOC and SVOC analyses.

Compound	Recovery (%)	Control Limits	Associated Samples	Actions
methylene chloride	215	70-130	SP-CS11, SP-CS10, SP-CS07, SP-CS05, SP-CS04, SP-CS03	Estimate (UJ) the blank-qualified nondetect results for methylene chloride in samples SP-CS10 and SP-CS07.
4-nitrophenol	112	45-95	All samples	Validation actions were not required as results were nondetect and therefore not affected by the potential high bias.
3-nitroaniline 3,3'-dichlorobenzidine	20 25	27-88 31-111	All samples	Estimate (UJ) the nondetect results for 3-nitroaniline and 3,3'-dichlorobenzidine in all samples.

Field Duplicate Results

A field duplicate pair was not associated with this sample group.

Quantitation Limits and Data Assessment

Results were reported which were below the lowest calibration standard level (RL) and above the method detection limit (MDL) in the VOC and SVOC analyses. These results were qualified by the laboratory (J). These results were qualified as estimated (J) due to uncertainty at the low end of calibration.

The following table lists the sample reanalyses which were performed and reported.

Sample	VOC Analysis Reported	SVOC Analysis Reported
SP-CS14	1 gram of sample was used for analysis instead of the typical method amount of 5 grams. Reporting limits were elevated 5-fold.	A 5-fold dilution was performed and reported. Nondetect quantitation limits were elevated accordingly.
SP-CS13	1 gram of sample was used for analysis instead of the typical method amount of 5 grams. Reporting limits were elevated 5-fold.	A 10-fold dilution was performed and reported. Nondetect quantitation limits were elevated accordingly.

Sample	VOC Analysis Reported	SVOC Analysis Reported
SP-CS12	1 gram of sample was used for analysis instead of the typical method amount of 5 grams. Reporting limits were elevated 5-fold.	A 10-fold dilution was performed and reported. Nondetect quantitation limits were elevated accordingly.
SP-CS11	1 gram of sample was used for analysis instead of the typical method amount of 5 grams. Reporting limits were elevated 5-fold.	A 20-fold dilution was performed and reported. Nondetect quantitation limits were elevated accordingly.
SP-CS10	1 gram of sample was used for analysis instead of the typical method amount of 5 grams. Reporting limits were elevated 5-fold.	A 5-fold dilution was performed and reported. Nondetect quantitation limits were elevated accordingly.
SP-CS09	1 gram of sample was used for analysis instead of the typical method amount of 5 grams. Reporting limits were elevated 5-fold.	A 10-fold dilution was performed and reported. Nondetect quantitation limits were elevated accordingly.
SP-CS08	1 gram of sample was used for analysis instead of the typical method amount of 5 grams. Reporting limits were elevated 5-fold.	A 5-fold dilution was performed and reported. Nondetect quantitation limits were elevated accordingly.
SP-CS07	1 gram of sample was used for analysis instead of the typical method amount of 5 grams. Reporting limits were elevated 5-fold.	NR
SP-CS06	1 gram of sample was used for analysis instead of the typical method amount of 5 grams. Reporting limits were elevated 5-fold.	A 5-fold dilution was performed and reported. Nondetect quantitation limits were elevated accordingly.
SP-CS05	1 gram of sample was used for analysis instead of the typical method amount of 5 grams. Reporting limits were elevated 5-fold. Sample were reanalyzed due to poor surrogate recoveries. Results from the initial analysis were reported as interference was confirmed in reanalysis.	A 20-fold dilution was performed and reported. Nondetect quantitation limits were elevated accordingly.
SP-CS04	1 gram of sample was used for analysis instead of the typical method amount of 5 grams. Reporting limits were elevated 5-fold.	Results for fluoranthene and pyrene were reported from the 50-fold dilution. All other results were reported from the 10-fold dilution analysis.
SP-CS03	1 gram of sample was used for analysis instead of the typical method amount of 5 grams. Reporting limits were elevated 5-fold.	A 10-fold dilution was performed and reported. Nondetect quantitation limits were elevated accordingly.

NR - Dilution or reanalysis was not required.

Sample Quantitation and Compound Identification

Calculations were spot-checked; no discrepancies were noted in the VOC analyses.

Upon review, the result for pyrene in sample SP-CS14 was found to be incorrectly reported as 3300 ug/kg, but should be 3000 ug/kg. The validator edited the reporting form. The TIC at retention time 17.38 was removed from the reporting form for sample SP-CS14 as the result was not supported in the raw data.

Sample Quantitation and Compound Identification

Calculations were spot-checked; no discrepancies were noted.

Project: Starlight Park
Laboratory: Chemtech, Mountainside, NJ
Report No.: Y3129
Reviewer: Lorie MacKinnon/GEI Consultants
Date: July 12, 2007

Samples Reviewed and Evaluation Summary

FIELD ID	LAB ID	FRACTIONS VALIDATED
C11E	Y3129-01	VOC, SVOC
C10E	Y3129-02	VOC, SVOC
Associated QC Samples:	Field/Trip Blanks:	None associated
	Field Duplicate pair:	None associated

The above-listed soil samples were collected on June 18, 2007 and were analyzed for volatile organic compounds (VOCs) by SW-846 method 8260B and semivolatile organic compounds (SVOCs) by SW-846 method 8270C. The data validation was based on the USEPA Region II Standard Operating Procedure (SOP) for the Validation of Organic Data Acquired using SW-846 Method 8260B, SOP No. HW-24, Revision 1, June 1999 and USEPA Region II Standard Operating Procedure (SOP) for the Validation of Organic Data Acquired using SW-846 Method 8270C, SOP No. HW-22, Revision 2, June 2001.

The organic data were evaluated based on the following parameters:

*	•	Data Completeness
*	•	Holding Times and Sample Preservation
*	•	Gas Chromatography/Mass Spectrometry (GC/MS) Tunes
	•	Initial and Continuing Calibrations
	•	Blanks
*	•	Surrogate Recoveries
	•	Matrix Spike/Matrix Spike Duplicate (MS/MSD) Results
	•	Laboratory Control Sample (LCS) Results
*	•	Internal Standards
NA	•	Field Duplicate Results
	•	Quantitation Limits and Data Assessment
	•	Sample Quantitation and Compound Identification

* - All criteria were met.

NA – A field duplicate pair was not associated with this sample set.

All results are usable for project objectives.

Qualifications were not applied to the data as a result of sampling error. Qualifications applied to the data as a result of analytical error are discussed below.

- Potential uncertainty exists for select VOC and SVOC results which were below the lowest calibration standard and quantitation limit. The results were qualified as estimated (J) by the laboratory. These results can be used for project objectives as estimated values which may have a minor impact on the data usability.

- The positive result for acetone in sample C11E was qualified as estimated (J) due to initial calibration nonconformances. The direction of the bias cannot be determined from these nonconformances. The result can be used for project objectives as an estimated value which may have a minor impact on the data usability.

- Estimate (J/UJ) the positive and nondetect results for trans-1,3-dichloropropene , cis-1,3-dichloropropene, styrene, 1,2,4-trichlorobenzene, acetone, and benzene in sample C11E due to low recoveries and/or high RPDs in the MS/MSD analyses. The results may be biased low. The results can be used for project objectives as estimated values and nondetects with estimated quantitation limits which may have a minor impact on the data usability.

- Estimate (UJ) the nondetect results for 3-nitroaniline and 3,3'-dichlorobenzidine in samples C10E and C11E due to low recoveries in the LCS. The results may be biased low. The results can be used for project objectives as nondetects with estimated quantitation limits which may have a minor impact on the data usability.

The validation findings were based on the following information.

Data Completeness

The data package was complete as defined under the requirements for the CLP-like deliverables for the VOC and SVOC analyses.

Holding Times and Sample Preservation

All holding time and sample preservation criteria were met in the VOC and SVOC analyses.

GC/MS Tunes

All criteria were met in the VOC and SVOC analyses.

Initial and Continuing Calibrations

VOC

Compounds that did not meet criteria in the VOC initial calibration are summarized in the following table.

Instrument ID MSVOAE Compound	IC 06/19/07
Dichlorodifluoromethane	X (27.4%)
Chloromethane	X (17.6%)
Vinyl chloride	X (18.7%)
Chloroethane	X (17.6%)
Trichlorofluoromethane	X (20.0%)
Acetone	X (22.5%)
Samples Affected	C11E, C10E

X = Initial calibration (IC) relative standard deviation (%RSD) > 15; estimate (J) positive result.
XX = Continuing calibration (CC) percent difference (%D) > 20; estimate (J/UJ) positive and nondetect results.
XXX = Continuing calibration (CC) percent difference (%D) > 90; estimate (J) positive results and reject (R) nondetect results.
+ = Response factor (RRF) < 0.05; Estimate (J) positive results and reject (R) nondetect results.

The positive result for acetone in sample C11E was estimated (J) due to initial calibration nonconformances.

Qualification of the data was not required for the remaining affected compounds as positive results are affected and dichlorodifluoromethane, chloromethane, vinyl chloride, chloroethane, and trichlorofluoromethane were not detected in the associated samples.

SVOC

Compounds that did not meet criteria in the SVOC initial calibration are summarized in the following table.

Instrument ID BNAA Compound	IC 06/19/06
benzaldehyde	X (24.8%)
2,4-dinitrophenol	X (20.1%)
Samples Affected	C10E, C11E

X = Initial calibration (IC) relative standard deviation (%RSD) > 15; estimate (J) positive results.
XX = Continuing calibration (CC) percent difference (%D) > 20; estimate (J/UJ) positive and nondetect results.
XXX = Continuing calibration (CC) percent difference (%D) > 90; estimate (J) positive results and reject (R) nondetect results.
+ = Response factor (RRF) < 0.05; Estimate (J) positive results and reject (R) nondetect results.

Qualification of the data was not required as only positive results are affected and benzaldehyde and 2,4-dinitrophenol were not detected in the associated samples.

Blanks

Target compounds were not detected in the VOC and SVOC method blank samples.

TICs which were detected in the samples at concentrations less than five times the concentrations detected in the method blank were rejected (R).

Surrogate Recoveries

All criteria were met in the VOC and SVOC samples.

MS/MSD Results

VOC

The laboratory performed the MS/MSD analyses on sample C11E. The following table lists the compounds recovered outside of the laboratory control limits and the resulting actions.

Compound	Recovery (%)	RPD	Control Limits	Validation Actions
Trans-1,3-dichloropropene	81, 78	-	82-139/20	Estimate (UJ) the nondetect result for trans-1,3-dichloropropene in sample C11E.
Cis-1,3-dichloropropene	76, 72	-	80-137/20	Estimate (UJ) the nondetect result for cis-1,3-dichloropropene in sample C11E.

Compound	Recovery (%)	RPD	Control Limits	Validation Actions
Styrene	70, 74	-	80-146/20	Estimate (UJ) the nondetect result for styrene in sample C11E.
1,2,4-Trichlorobenzene	63, 61	-	67-155/20	Estimate (UJ) the nondetect result 1,2,4-trichlorobenzene in sample C11E.
Acetone	-	26	56-176/20	Estimate (J) the positive result for acetone in sample C11E.
Benzene	MSD 78	26	83-135/20	Estimate (J) the positive result for benzene in sample C11E.

- Within control limits

SVOC

The laboratory performed the MS/MSD analyses on sample C10E. All criteria were met.

Internal Standards

All criteria were met in the VOC and SVOC analyses.

LCS Results

VOC

All criteria were met in the VOC analyses.

SVOC

The following table lists the compounds recovered outside of the LCS sample and the resulting actions.

Compound	Recovery (%)	Control Limits	Validation Actions
3-Nitroaniline	24	27-88	Estimate (UJ) the nondetect results for 3-nitroaniline and 3,3'-dichlorobenzidine in samples C10E and C11E.
3,3'-dichlorobenzidine	28	31-111	

Field Duplicate Results

A field duplicate pair was not associated with this sample set.

Quantitation Limits and Data Assessment

VOC

Results were reported which were below the lowest calibration standard level (QL) and above the method detection limit (MDL) in the VOC analyses. These results were qualified by the laboratory (J). These results were qualified as estimated (J) due to uncertainty at the low end of calibration.

The VOC analysis was performed with one gram of sample to 5 ml, instead of the typical preparation of five grams to 5 ml. QLs were elevated accordingly.

SVOC

Results were reported which were below the lowest calibration standard level (QL) and above the method detection limit (MDL) in the SVOC analyses. These results were qualified by the laboratory (J). These results were qualified as estimated (J) due to uncertainty at the low end of calibration.

Sample Quantitation and Compound Identification

VOC

Calculations were spot-checked; no discrepancies were noted in the VOC analyses.

The results for naphthalene were rejected (R) as tentatively identified compounds for samples C10E and C11E as they are reported as target compounds in the SVOC analyses.

SVOC

Calculations were spot-checked; no discrepancies were noted in the SVOC analyses.

Project: Starlight Park
Laboratory: Chemtech, Mountainside, NJ
Report No.: Y2989
Reviewer: Lorie MacKinnon/GEI Consultants
Date: July 12, 2007

Samples Reviewed and Evaluation Summary

FIELD ID	LAB ID	FRACTIONS VALIDATED
SP-CS15	Y2989-01	VOC, SVOC
Associated QC Samples:	Field/Trip Blanks:	None associated
	Field Duplicate pair:	None associated

The above-listed soil sample was collected on June 6, 2007 and was analyzed for volatile organic compounds (VOCs) by SW-846 method 8260B and semivolatile organic compounds (SVOCs) by SW-846 method 8270C. The data validation was based on the USEPA Region II Standard Operating Procedure (SOP) for the Validation of Organic Data Acquired using SW-846 Method 8260B, SOP No. HW-24, Revision 1, June 1999 and USEPA Region II Standard Operating Procedure (SOP) for the Validation of Organic Data Acquired using SW-846 Method 8270C, SOP No. HW-22, Revision 2, June 2001.

The organic data were evaluated based on the following parameters:

*	•	Data Completeness
*	•	Holding Times and Sample Preservation
*	•	Gas Chromatography/Mass Spectrometry (GC/MS) Tunes
	•	Initial and Continuing Calibrations
	•	Blanks
*	•	Surrogate Recoveries
	•	Matrix Spike/Matrix Spike Duplicate (MS/MSD) Results
	•	Laboratory Control Sample (LCS) Results
*	•	Internal Standards
NA	•	Field Duplicate Results
	•	Quantitation Limits and Data Assessment
	•	Sample Quantitation and Compound Identification

* - All criteria were met.

NA – A field duplicate pair was not associated with this sample set.

All results are usable for project objectives.

Qualifications were not applied to the data as a result of sampling error. Qualifications applied to the data as a result of analytical error are discussed below.

- Potential uncertainty exists for select VOC and SVOC results which were below the lowest calibration standard and quantitation limit. The results were qualified as estimated (J) by the laboratory. These results can be used for project objectives as estimated values which may have a minor impact on the data usability.

- The positive result for acetone in sample SP-CS15 was qualified as estimated (J) due to initial calibration nonconformances. The direction of the bias cannot be determined from this nonconformance. The result can be used for project objectives as an estimated value which may have a minor impact on the data usability.

- The nondetect result for hexachlorocyclopentadiene in sample SP-CS15 was qualified as estimated (UJ) due to continuing calibration nonconformances. The direction of the bias cannot be determined from this nonconformance. The result can be used for project objectives as a nondetect with an estimated quantitation limit which may have a minor impact on the data usability.

- The nondetect result for 3,3'-dichlorobenzidine in sample SP-CS15 was qualified as estimated (UJ) due to low recovery in the LCS. The result may be biased low. The result can be used for project objectives as a nondetect with estimated quantitation limit which may have a minor impact on the data usability.

The validation findings were based on the following information.

Data Completeness

The data package was complete as defined under the requirements for the CLP-like deliverables for the VOC and SVOC analyses.

Holding Times and Sample Preservation

All holding time and sample preservation criteria were met in the VOC and SVOC analyses.

GC/MS Tunes

All criteria were met in the VOC and SVOC analyses.

Initial and Continuing Calibrations

VOC

Compounds that did not meet criteria in the VOC initial and continuing calibrations are summarized in the following table.

Instrument ID MSVOAK Compound	IC 06/07/07	CC 06/0807
Bromomethane	X (31.7%)	XX (25.3%)
Chloroethane	X (76.8%)	XX (50.0%)
Trichlorofluoromethane	X (52.8%)	XX (25.2%)
1,1,2-Trichlorofluoroethane	X (22.9%)	
1,1-Dichloroethene	X (25.0%)	
Acetone	X (24.7%)	
Carbon disulfide	X (24.2%)	
Methyl acetate	X (24.1%)	XX (21.1%)
Methylene chloride	X (22.0%)	
1,2,4-Trichlorobenzene	X (15.9%)	
Samples Affected	SP-CS15	QC samples

X = Initial calibration (IC) relative standard deviation (%RSD) > 15; estimate (J) positive result.
XX = Continuing calibration (CC) percent difference (%D) > 20; estimate (J/UJ) positive and nondetect results.
XXX = Continuing calibration (CC) percent difference (%D) > 90; estimate (J) positive results and reject (R) nondetect results.
+ = Response factor (RRF) < 0.05; Estimate (J) positive results and reject (R) nondetect results.

The positive result for acetone in sample SP-CS15 was estimated (J) due to initial calibration nonconformances. Qualification of the data was not required for bromomethane, chloroethane, trichlorofluoromethane, 1,1,2-trichlorofluoroethane, 1,1-dichloroethene, carbon disulfide, methyl acetate, methylene chloride, and 1,2,4-trichlorobenzene as positive results are affected and these compounds were not detected in sample SP-CS15.

Validation actions due to calibration nonconformances for the QC samples were not required.

SVOC

Compounds that did not meet criteria in the SVOC initial and continuing calibrations are summarized in the following table.

Instrument ID BNAF Compound	IC 05/24/07	CC 06/07/07 14:31
Hexachlorocyclopentadiene	X (22.0%)	XX (41.9%)
2,4-Dinitrophenol	X (22.3%)	
Samples Affected	SP-CS15, SP-CS15DL	SP-CS15, SP-CS15DL

X = Initial calibration (IC) relative standard deviation (%RSD) > 15; estimate (J) positive result.
XX = Continuing calibration (CC) percent difference (%D) > 20; estimate (J/UJ) positive and nondetect results.
XXX = Continuing calibration (CC) percent difference (%D) > 90; estimate (J) positive results and reject (R) nondetect results.
+ = Response factor (RRF) < 0.05; Estimate (J) positive results and reject (R) nondetect results.

Qualification of the data was not required for hexachlorocyclopentadiene and 2,4-dinitrophenol due to initial calibration nonconformances as only positive results are affected and these compounds were not detected in sample SP-CS15. The nondetect result for hexachlorocyclopentadiene in sample SP-CS15 was estimated (UJ) due to continuing calibration nonconformances.

Blanks

Target compounds were not detected in the VOC and SVOC method blank samples.

TICs which were detected in the samples at concentrations less than five times the concentrations detected in the method blank were rejected (R).

Surrogate Recoveries

All criteria were met in the VOC and SVOC samples.

MS/MSD Results

VOC

The laboratory reported results for MS/MSD analyses performed on a non-project sample (Y2972-01). The recoveries for methyl acetate (MSD 184) and 1,2-dibromo-3-chloropropane

(MSD 140) and the relative percent differences (RPDs) for chloroethane (23), methyl acetate (30), and acetone (41) were outside of the control limits in the MS/MSD. Qualification of the data for samples in this case number on the basis of the nonconformances was not required due to differences in sample matrix, type, etc.

SVOC

The laboratory reported results for MS/MSD analyses performed on a non-project sample (Y2963-02). The recoveries for 3,3'-dichlorobenzidine (27, 26) were outside of the control limits in the MS/MSD. Qualification of the data for samples in this case number on the basis of the nonconformances was not required due to differences in sample matrix, type, etc.

Internal Standards

All criteria were met in the VOC and SVOC analyses.

LCS Results

VOC

All criteria were met.

SVOC

The following table lists the compounds recovered outside of the LCS analyses and the resulting actions.

Compound	Recovery (%)	Control Limits	Validation Actions
3,3'-dichlorobenzidine	16	31-111	Estimate (UJ) the nondetect results for 3,3'-dichlorobenzidine in sample SP-CS15.

Field Duplicate Results

A field duplicate pair was not associated with this sample set.

Quantitation Limits and Data Assessment

VOC

Results were reported which were below the lowest calibration standard level (QL) and above the method detection limit (MDL) in the VOC analyses. These results were qualified by the

laboratory (J). These results were qualified as estimated (J) due to uncertainty at the low end of calibration.

The VOC analysis was performed with one gram of sample to 5 ml, instead of the typical preparation of five grams to 5 ml. QLs were elevated accordingly.

SVOC

Results were reported which were below the lowest calibration standard level (QL) and above the method detection limit (MDL) in the SVOC analyses. These results were qualified by the laboratory (J). These results were qualified as estimated (J) due to uncertainty at the low end of calibration.

Sample SP-CS15 was analyzed at a 10-fold dilution due to the concentrations of naphthalene, phenanthrene, anthracene, fluoranthene, pyrene, benzo(a)anthracene, chrysene, benzo(b)fluoranthene, benzo(a)pyrene, indeno(123-cd)pyrene, and benzo(ghi)perylene which exceeded the calibration range in the undiluted analysis. The validator combined the results of the diluted and undiluted analyses in order to report the lowest possible quantitation limits and all results within the calibration range.

Sample Quantitation and Compound Identification

VOC

Calculations were spot-checked; no discrepancies were noted in the VOC analyses.

The results for naphthalene and 2-methylnaphthalene were rejected (R) as tentatively identified compounds for sample SP-CS15 as these results are reported as target compounds in the SVOC analyses.

SVOC

Calculations were spot-checked; no discrepancies were noted in the SVOC analyses.

Project: Starlight Park
Laboratory: Chemtech, Mountainside, NJ
Report No.: Y3069

Date: July 12, 2007

Samples Reviewed and Evaluation Summary

FIELD ID	LAB ID	FRACTIONS VALIDATED
SP-CS16	Y3069-01	VOC, SVOC
Associated QC Samples:	Field/Trip Blanks:	None associated
	Field Duplicate pair:	None associated

The above-listed soil sample was collected on June 13, 2007 and was analyzed for volatile organic compounds (VOCs) by SW-846 method 8260B and semivolatile organic compounds (SVOCs) by SW-846 method 8270C. The data validation was based on the USEPA Region II Standard Operating Procedure (SOP) for the Validation of Organic Data Acquired using SW-846 Method 8260B, SOP No. HW-24, Revision 1, June 1999 and USEPA Region II Standard Operating Procedure (SOP) for the Validation of Organic Data Acquired using SW-846 Method 8270C, SOP No. HW-22, Revision 2, June 2001.

The organic data were evaluated based on the following parameters:

*	•	Data Completeness
*	•	Holding Times and Sample Preservation
*	•	Gas Chromatography/Mass Spectrometry (GC/MS) Tunes
	•	Initial and Continuing Calibrations
	•	Blanks
*	•	Surrogate Recoveries
	•	Matrix Spike/Matrix Spike Duplicate (MS/MSD) Results
	•	Laboratory Control Sample (LCS) Results
*	•	Internal Standards
NA	•	Field Duplicate Results
	•	Quantitation Limits and Data Assessment
	•	Sample Quantitation and Compound Identification

* - All criteria were met.

NA – A field duplicate pair was not associated with this sample set.

All results are usable for project objectives.

Qualifications were not applied to the data as a result of sampling error. Qualifications applied to the data as a result of analytical error are discussed below.

- Potential uncertainty exists for select VOC and SVOC results which were below the lowest calibration standard and quantitation limit. The results were qualified as estimated (J) by the laboratory. These results can be used for project objectives as estimated values which may have a minor impact on the data usability.

- The positive results for benzo(b)fluoranthene, benzo(k)fluoranthene, and benzo(a)pyrene in sample SP-CS16 were qualified as estimated (J) due to initial calibration nonconformances. The direction of the bias cannot be determined from these nonconformances. The results can be used for project objectives as estimated values which may have a minor impact on the data usability.

- The nondetect results for trichlorofluoromethane and 2,4-dinitrophenol in sample SP-CS16 were qualified as estimated (UJ) due to continuing calibration nonconformances. The direction of the bias cannot be determined from these nonconformances. The results can be used for project objectives as nondetects with estimated quantitation limits which may have a minor impact on the data usability.

- Estimate (J/UJ) the positive and nondetect results for 3,3'-dichlorobenzidine, indeno(123-cd)pyrene, benzo(a)pyrene, benzo(ghi)perylene, and benzo(a)anthracene in sample SP-CS16 due to low recoveries in the MS/MSD analyses. The results may be biased low. The results can be used for project objectives as estimated values and nondetects with estimated quantitation limits which may have a minor impact on the data usability.

- Estimate (UJ) the nondetect results for 4-chloroaniline, 3-nitroaniline and 3,3'-dichlorobenzidine in sample SP-CS16 due to low recoveries in the LCS. The results may be biased low. The results can be used for project objectives as nondetects with estimated quantitation limits which may have a minor impact on the data usability.

The validation findings were based on the following information.

Data Completeness

The data package was complete as defined under the requirements for the CLP-like deliverables for the VOC and SVOC analyses.

Holding Times and Sample Preservation

All holding time and sample preservation criteria were met in the VOC and SVOC analyses.

GC/MS Tunes

All criteria were met in the VOC and SVOC analyses.

Initial and Continuing Calibrations

VOC

Compounds that did not meet criteria in the VOC initial and continuing calibrations are summarized in the following table.

Instrument ID MSVOAK Compound	IC 06/12/07	CC 06/13/07
Bromomethane	X (17.3%)	
Chloroethane	X (49.3%)	
Trichlorofluoromethane	X (53.9%)	X (23.8%)
1,1,2-Trichlorofluoroethane	X (22.4%)	
1,1-Dichloroethene	X (27.6%)	
Carbon disulfide	X (20.5%)	
Samples Affected	SP-CS16	SP-CS16

X = Initial calibration (IC) relative standard deviation (%RSD) > 15; estimate (J) positive results.
XX = Continuing calibration (CC) percent difference (%D) > 20; estimate (J/UJ) positive and nondetect results.
XXX = Continuing calibration (CC) percent difference (%D) > 90; estimate (J) positive results and reject (R) nondetect results.
+ = Response factor (RRF) < 0.05; Estimate (J) positive results and reject (R) nondetect results.

Qualification of the data was not required for bromomethane, chloroethane, trichlorofluoromethane, 1,1,2-trichlorofluoroethane, 1,1-dichloroethene, and carbon disulfide due to initial calibration nonconformances as positive results are affected and these compounds were not detected in the sample SP-CS16.

The nondetect result for trichlorofluoromethane in sample SP-CS16 was estimated (UJ) due to continuing calibration nonconformances.

SVOC

Compounds that did not meet criteria in the SVOC initial and continuing calibrations are summarized in the following table.

Instrument ID BNAB Compound	IC 06/0706	CC 06/14/07 12:25
2,4-Dinitrophenol	X (36.6%)	XX (22.6%)
4,6-dinitro-2-methylphenol	X (18.0%)	
Benzo(b)fluoranthene	X (17.7%)	
Benzo(k)fluoranthene	X (17.4%)	
Benzo(a)pyrene	X (15.5%)	
Samples Affected	SP-CS16, SP-CS16DL	SP-CS16, SP-CS16DL

X = Initial calibration (IC) relative standard deviation (%RSD) > 15; estimate (J) positive result.
XX = Continuing calibration (CC) percent difference (%D) > 20; estimate (J/UJ) positive and nondetect results.
XXX = Continuing calibration (CC) percent difference (%D) > 90; estimate (J) positive results and reject (R) nondetect results.
+ = Response factor (RRF) < 0.05; Estimate (J) positive results and reject (R) nondetect results.

Qualification of the data was not required for 2,4-dinitrophenol and 4,6-dinitro-2-methylphenol due to initial calibration nonconformances as only positive results are affected and these compounds were not detected in sample SP-CS16. The positive results for benzo(b)fluoranthene, benzo(k)fluoranthene, and benzo(a)pyrene in sample SP-CS16 were estimated (J) due to initial calibration nonconformances. The nondetect result for 2,4-dinitrophenol in sample SP-CS16 was estimated (UJ) due to continuing calibration nonconformances.

Validation actions were not required for sample SP-CS16DL due to calibration nonconformances as the affected compound results were not reported from the diluted analysis.

Blanks

Target compounds were not detected in the VOC and SVOC method blank samples.

TICs which were detected in the samples at concentrations less than five times the concentrations detected in the method blank were rejected (R).

Surrogate Recoveries

All criteria were met in the VOC and SVOC samples.

MS/MSD Results

VOC

The laboratory reported results for MS/MSD analyses performed on a non-project sample (Y061-01. The recoveries for chloroethane (136, 126), 4-methyl-2-pentanone (68, 68), trans-1,3-dichloropropene (76, 76), 1,1,2-trichloroethane (76, 78), 2-hexanone (60, 60), 1,2-dibromoethane (70, 70), isopropylbenzene (170, 178), 1,2,4-trichlorobenzene (44, 42), and dibromochloromethane (MSD 74) were outside of the control limits in the MS/MSD. Qualification of the data for samples in this case number on the basis of the nonconformances was not required due to differences in sample matrix, type, etc.

SVOC

The laboratory performed the MS/MSD analyses on sample SP-CS16. The following table lists the compounds recovered outside of the laboratory control limits and the resulting actions.

Compound	Recovery (%)	Control Limits	Validation Actions
Fluoranthene	33, 29	55-105	Validation actions were not required as the results for fluoranthene were over-calibrated in the MS/MSD and therefore do to accurately reflect the recoveries.
3,3'-Dichlorobenzidine	16, 17	31-111	Estimate (J/UJ) the positive and nondetect results for 3,3'-dichlorobenzidine, indeno(123-cd)pyrene, benzo(a)pyrene, benzo(ghi)perylene, and benzo(a)anthracene in sample SP-CS16.
Indeno(123-cd)pyrene	38, 33	42-124	
Benzo(a)pyrene	48, 52	58-102	
Benzo(ghi)perylene	32, 32	39-130	
Benzo(a)anthracene	MSD 52	60-100	

- Within control limits

Internal Standards

All criteria were met in the VOC and SVOC analyses.

LCS Results

The following table lists the compounds recovered outside of the LCS analyses and the resulting actions.

Compound	Recovery (%)	Control Limits	Validation Actions
Bromomethane	135	70-130	Validation action was not required as the result for bromomethane was nondetect in sample SP-CS16 and therefore not affected by the potential high bias.
4-Chloroaniline	14	15-92	Estimate (UJ) the nondetect results for 4-chloroaniline, 3-nitroaniline and 3,3'-dichlorobenzidine in sample SP-CS16.
3-Nitroaniline	25	27-88	
3,3'-dichlorobenzidine	23	31-111	

Field Duplicate Results

A field duplicate pair was not associated with this sample set.

Quantitation Limits and Data Assessment

VOC

Results were reported which were below the lowest calibration standard level (QL) and above the method detection limit (MDL) in the VOC analyses. These results were qualified by the laboratory (J). These results were qualified as estimated (J) due to uncertainty at the low end of calibration.

The VOC analysis was performed with one gram of sample to 5 ml, instead of the typical preparation of five grams to 5 ml. QLs were elevated accordingly.

SVOC

Results were reported which were below the lowest calibration standard level (QL) and above the method detection limit (MDL) in the SVOC analyses. These results were qualified by the laboratory (J). These results were qualified as estimated (J) due to uncertainty at the low end of calibration.

Sample SP-CS16 was analyzed at a 5-fold dilution due to the concentration of fluoranthene which exceeded the calibration range in the undiluted analysis. The validator combined the results of the diluted and undiluted analyses in order to report the lowest possible quantitation limits and all

results within the calibration range.

Sample Quantitation and Compound Identification

VOC

Calculations were spot-checked; no discrepancies were noted in the VOC analyses.

The results for naphthalene and 2-methylnaphthalene were rejected (R) as tentatively identified compounds for sample SP-CS16 as the results are reported as target compounds in the SVOC analyses.

SVOC

Calculations were spot-checked; no discrepancies were noted in the SVOC analyses.

Date: July 12, 2007

Samples Reviewed and Evaluation Summary

FIELD ID	LAB ID	FRACTIONS VALIDATED
SP-CSC12E	Y3170-01	VOC, SVOC
Associated QC Samples:	Field/Trip Blanks:	None associated
	Field Duplicate pair:	None associated

The above-listed soil sample was collected on June 20, 2007 and was analyzed for volatile organic compounds (VOCs) by SW-846 method 8260B and semivolatile organic compounds (SVOCs) by SW-846 method 8270C. The data validation was based on the USEPA Region II Standard Operating Procedure (SOP) for the Validation of Organic Data Acquired using SW-846 Method 8260B, SOP No. HW-24, Revision 1, June 1999 and USEPA Region II Standard Operating Procedure (SOP) for the Validation of Organic Data Acquired using SW-846 Method 8270C, SOP No. HW-22, Revision 2, June 2001.

The organic data were evaluated based on the following parameters:

*	•	Data Completeness
*	•	Holding Times and Sample Preservation
	•	Gas Chromatography/Mass Spectrometry (GC/MS) Tunes
	•	Initial and Continuing Calibrations
	•	Blanks
*	•	Surrogate Recoveries
	•	Matrix Spike/Matrix Spike Duplicate (MS/MSD) Results
	•	Laboratory Control Sample (LCS) Results
*	•	Internal Standards
NA	•	Field Duplicate Results
	•	Quantitation Limits and Data Assessment
*	•	Sample Quantitation and Compound Identification

* - All criteria were met.

NA – A field duplicate pair was not associated with this sample set.

All results are usable for project objectives.

Qualifications were not applied to the data as a result of sampling error. Qualifications applied to the data as a result of analytical error are discussed below.

- Potential uncertainty exists for select VOC and SVOC results which were below the lowest calibration standard and quantitation limit. The results were qualified as estimated (J) by the laboratory. These results can be used for project objectives as estimated values which may have a minor impact on the data usability.

- The nondetect results for dichlorodifluoromethane, trichlorofluoromethane, and acetone in sample SP-CSC12E were qualified as estimated (UJ) due to continuing calibration nonconformances. The direction of the bias cannot be determined from these nonconformances. The results can be used for project objectives as nondetects with estimated quantitation limits which may have a minor impact on the data usability.

- Estimate (UJ) the nondetect results for 4-chloro-3-methylphenol, 3-nitroaniline, 3,3'-dichlorobenzidine, and benzo(a)pyrene in sample SP-CSC12E due to low recoveries in the LCS. The results may be biased low. The results can be used for project objectives as nondetects with estimated quantitation limits which may have a minor impact on the data usability.

The validation findings were based on the following information.

Data Completeness

The data package was complete as defined under the requirements for the CLP-like deliverables for the VOC and SVOC analyses.

Holding Times and Sample Preservation

All holding time and sample preservation criteria were met in the VOC and SVOC analyses.

GC/MS Tunes

VOC

In the BFB tune analyzed on 06/21/07 at 10:06, associated with sample SP-CSC12E, the relative abundance for ion of mass 75 (60.2) did not meet the acceptance criteria of 30 – 60. Validation action was not taken on this basis as the abundance was slightly outside of control limits.

SVOC

All criteria were met in the SVOC analyses.

Initial and Continuing Calibrations

VOC

Compounds that did not meet criteria in the VOC initial and continuing calibrations are summarized in the following table.

Instrument ID MSVOAE Compound	IC 06/19/07	CC 06/20/07 13:35	CC 06/21/07 10:50
Dichlorodifluoromethane	X (27.4%)		XX (37.8%)
Chloromethane	X (17.6%)		
Vinyl chloride	X (18.7%)		
Chloroethane	X (17.6%)		
Trichlorofluoromethane	X (20.0%)		XX (24.1%)
Acetone	X (22.5%)	XX (42.2%)	XX (55.3%)
Samples Affected	SP-CSC12E	QC samples	SP-CSC12E

X = Initial calibration (IC) relative standard deviation (%RSD) > 15; estimate (J) positive result.
XX = Continuing calibration (CC) percent difference (%D) > 20; estimate (J/UJ) positive and nondetect results.
XXX = Continuing calibration (CC) percent difference (%D) > 90; estimate (J) positive results and reject (R) nondetect results.
+ = Response factor (RRF) < 0.05; Estimate (J) positive results and reject (R) nondetect results.

Qualification of the data was not required due to initial calibration nonconformances as positive results are affected and dichlorodifluoromethane, chloromethane, vinyl chloride, chloroethane, trichlorofluoromethane, and acetone were not detected in sample SP-CSC12E.

The nondetect results for dichlorodifluoromethane, trichlorofluoromethane, and acetone in sample SP-CSC12E were estimated (UJ) due to continuing calibration nonconformances.

SVOC

Compounds that did not meet criteria in the SVOC initial calibration are summarized in the following table.

Instrument ID BNAE Compound	IC 06/14/06
Benzaldehyde	X (18.7%)
2,4-Dinitrophenol	X (30.2%)
Benzo(b)fluoranthene	X (18.4%)
Benzo(k)fluoranthene	X (17.6%)
Benzo(a)pyrene	X (17.7%)
Samples Affected	SP-CSC12E

X = Initial calibration (IC) relative standard deviation (%RSD) > 15; estimate (J) positive result.
XX = Continuing calibration (CC) percent difference (%D) > 20; estimate (J/UJ) positive and nondetect results.
XXX = Continuing calibration (CC) percent difference (%D) > 90; estimate (J) positive results and reject (R) nondetect results.
+ = Response factor (RRF) < 0.05; Estimate (J) positive results and reject (R) nondetect results.

Qualification of the data was not required as positive results are affected and benzaldehyde, 2,4-dinitrophenol, benzo(b)fluoranthene, benzo(k)fluoranthene, and benzo(a)pyrene were not detected in the associated samples.

Blanks

Target compounds were not detected in the VOC and SVOC method blank samples.

TICs which were detected in the samples at concentrations less than five times the concentrations detected in the method blank were rejected (R).

Surrogate Recoveries

All criteria were met in the VOC and SVOC samples.

MS/MSD Results

VOC

The laboratory reported results for MS/MSD analyses performed on a non-project sample (Y3119-28). The recoveries for dichlorodifluoromethane (144 and 152), methyl acetate (156 and 172), chloromethane (MSD 132), chloroethane (MSD 128), and 1,2,4-trichlorobenzene (MSD 60) and the relative percent difference (RPD) for 1,2,4-trichlorobenzene (29) were outside of the

control limits in the MS/MSD. Qualification of the data for samples in this case number on the basis of the nonconformances was not required due to differences in sample matrix, type, etc.

SVOC

The laboratory reported results for MS/MSD analyses performed on a non-project sample (Y3158-01). The recoveries for 4-chloro-3-methylphenol (58 and 56), 2,4-dinitrophenol (17 and 18), 4,6-dinitro-2-methylphenol (16 and 17), and benzo(a)pyrene (55 and 55) were outside of the control limits in the MS/MSD. Qualification of the data for samples in this case number on the basis of the nonconformances was not required due to differences in sample matrix, type, etc.

Internal Standards

All criteria were met in the VOC and SVOC analyses.

LCS Results

The following table lists the compounds recovered outside of the LCS VOC and SVOC analyses and the resulting actions.

Compound	Recovery (%)	Control Limits	Validation Actions
Dichlorodifluoromethane	135	70-130	Validation actions were not required as results for dichlorodifluoromethane and trichlorofluoromethane were nondetect in sample SP-CSC12E and therefore not affected by the potential high bias.
Trichlorofluoromethane	135	70-130	
4-Chloro-3-methylphenol	55	60-100	Estimate (UJ) the nondetect results for 4-chloro-3-methylphenol, 3-nitroaniline, 3,3'-dichlorobenzidine, and benzo(a)pyrene in sample SP-CSC12E.
3-Nitroaniline	24	27-88	
3,3'-Dichlorobenzidine	26	31-111	
Benzo(a)pyrene	54	58-102	

Field Duplicate Results

A field duplicate pair was not associated with this sample set.

Quantitation Limits and Data Assessment

VOC

Results were reported which were below the lowest calibration standard level (QL) and above the method detection limit (MDL) in the VOC analyses. These results were qualified by the

laboratory (J). These results were qualified as estimated (J) due to uncertainty at the low end of calibration.

The VOC analysis was performed with one gram of sample to 5 ml, instead of the typical preparation of five grams to 5 ml. QLs were elevated accordingly.

SVOC

Results were reported which were below the lowest calibration standard level (QL) and above the method detection limit (MDL) in the SVOC analyses. These results were qualified by the laboratory (J). These results were qualified as estimated (J) due to uncertainty at the low end of calibration.

Sample Quantitation and Compound Identification

Calculations were spot-checked; no discrepancies were noted in the VOC and SVOC analyses.

Project: Starlight Park
Laboratory: Test America, Shelton, CT
Report No.: 220-2508
Reviewer: Lorie MacKinnon/GEI Consultants
Date: September 18 2007

Samples Reviewed and Evaluation Summary

FIELD ID	LAB ID	FRACTIONS VALIDATED
SP-CSD9N	220-2508-1	VOC, SVOC
SP-CSE9N	220-2508-2	VOC, SVOC
SP-CSD9S2	220-2508-3	VOC, SVOC
SP-CSF9S2	220-2508-4	VOC, SVOC
SP-CSF9N	220-2508-5	VOC, SVOC
SP-CSE9S2	220-2508-6	VOC, SVOC
Associated QC Samples:	Field/Trip Blanks:	None associated
	Field Duplicate pair:	None associated

The above-listed soil samples were collected on August 23, 2007 and were analyzed for volatile organic compounds (VOCs) by SW-846 method 8260B and semivolatile organic compounds (SVOCs) by SW-846 method 8270C. The data validation was based on the USEPA Region II Standard Operating Procedure (SOP) for the Validation of Organic Data Acquired using SW-846 Method 8260B, SOP No. HW-24, Revision 1, June 1999 and USEPA Region II Standard Operating Procedure (SOP) for the Validation of Organic Data Acquired using SW-846 Method 8270C, SOP No. HW-22, Revision 2, June 2001.

The organic data were evaluated based on the following parameters:

*	•	Data Completeness
*	•	Holding Times and Sample Preservation
*	•	Gas Chromatography/Mass Spectrometry (GC/MS) Tunes
	•	Initial and Continuing Calibrations
	•	Blanks
*	•	Surrogate Recoveries
	•	Matrix Spike/Matrix Spike Duplicate (MS/MSD) Results
	•	Internal Standards
	•	Laboratory Control Sample (LCS) Results
	•	Moisture Content
NA	•	Field Duplicate Results
	•	Quantitation Limits and Data Assessment
*	•	Sample Quantitation and Compound Identification

* - All criteria were met.

NA -- A field duplicate pair was not associated with this sample set.

All results are usable for project objectives.

Qualifications applied to the data as a result of sampling error are discussed below.

- The positive and nondetect results for samples SP-CSE9N, SP-CSF9S2, and SP-CSF9N were qualified as estimated (J/UJ) due to high moisture content. The results are usable for project objectives as estimated values and nondetects with estimated quantitation limits. This qualification may have a minor impact on the data usability.

Qualifications applied to the data as a result of analytical error are discussed below.

- Potential uncertainty exists for select VOC and SVOC results which were below the lowest calibration standard and quantitation limit. The results were qualified as estimated (J) by the laboratory. These results can be used for project objectives as estimated values which may have a minor impact on the data usability.

- The positive results for methylene chloride in samples SP-CSD9N, SP-CSE9N, SP-CSD9S2, SP-CSF9S2, SP-CSF9N, and SP-CSE9S2 were qualified as a nondetect (U) at the quantitation limit (QL) due to laboratory blank contamination. The results are still usable for project objectives as nondetects. This qualification may have a minor impact on the data usability.

- The positive and nondetect results for acetone, hexachlorocyclopentadiene, and bis(2-ethylhexyl)phthalate in all samples were qualified as estimated (J/UJ) due to calibration nonconformances. The direction of the bias cannot be determined from these nonconformances. The results can be used for project objectives as estimated values and nondetects with estimated quantitation limits which may have a minor impact on the data usability.

- The positive results for benzo(b)fluoranthene, benzo(k)fluoranthene, benzo(a)pyrene, indeno(123-cd)pyrene, dibenzo(ah)anthracene, and benzo(ghi)perylene in samples SP-CSD9N, SP-CSF9S2, SP-CSE9S2, and SP-CSD9S2 and benzo(b)fluoranthene, benzo(k)fluoranthene, benzo(a)pyrene, indeno(123-cd)pyrene, and benzo(ghi)perylene in sample SP-CSF9N were qualified as estimated (J) due to high internal standard recoveries. The results can be used for project objectives as estimated values which may have a minor impact on the data usability.

The validation findings were based on the following information.

Data Completeness

The data package was complete as defined under the requirements for the CLP-like deliverables for the VOC and SVOC analyses.

Holding Times and Sample Preservation

All holding time and sample preservation criteria were met in the VOC and SVOC analyses.

GC/MS Tunes

All criteria were met in the VOC and SVOC analyses.

Initial and Continuing Calibrations

VOC

Compounds that did not meet criteria in the VOC initial and continuing calibrations are summarized in the following table.

Instrument ID MSN Compound	IC 08/14/07	CC 08/24/07
Acetone	X (27.4%)	XX (34.4%)
Samples Affected	All samples	All samples

X = Initial calibration (IC) relative standard deviation (%RSD) > 15; estimate (J) positive results only.
XX = Continuing calibration (CC) percent difference (%D) > 20; estimate (J/UJ) positive and nondetect results.
XXX = Continuing calibration (CC) percent difference (%D) > 90; estimate (J) positive results and reject (R) nondetect results.
+ = Response factor (RRF) < 0.05; Estimate (J) positive results and reject (R) nondetect results.

The positive and nondetect results for acetone in all samples were estimated (J/UJ) due to initial and continuing calibration nonconformances.

SVOC

Compounds that did not meet criteria in the SVOC initial and continuing calibrations are summarized in the following table.

Instrument ID MSA Compound	IC 08/22/07	CC 08/23/07 14:41	CC 08/24/07 10:59
hexachlorocyclopentadiene	X (16.0%)		XX (21.0%)
2,4-dinitrophenol	X (25.2%)	XX (21.6%)	
pentachlorophenol	X (19.4%)		
bis(2-ethylhexyl)phthalate			XX (32.3%)
Samples Affected	All samples	QC samples	All samples

X = Initial calibration (IC) relative standard deviation (%RSD) > 15; estimate (J) positive results only.
XX = Continuing calibration (CC) percent difference (%D) > 20; estimate (J/UJ) positive and nondetect results.
XXX = Continuing calibration (CC) percent difference (%D) > 90; estimate (J) positive results and reject (R) nondetect results.
+ = Response factor (RRF) < 0.05; Estimate (J) positive results and reject (R) nondetect results.

Qualification of the data was not required for hexachlorocyclopentadiene, 2,4-dinitrophenol, and pentachlorophenol due to initial calibration nonconformances as only positive results are affected and these compounds were not detected in the case samples. The nondetect results for hexachlorocyclopentadiene and bis(2-ethylhexyl)phthalate in all samples were estimated (UJ) due to continuing calibration nonconformances.

Blanks

VOCs

Methylene chloride was detected in the VOC method blank. The presence of blank contamination indicates that false positives may exist for this compound in the associated samples. Action Levels (ALs) were established at 10x (for common contaminants) and 5x (for other compounds) the concentrations detected. The following table summarizes the AL.

Compound	Type of Blank	Associated Samples	Maximum Concentration	Action Level
Methylene chloride	Method	All samples	1.5 ug/kg	15 ug/kg

Sample results were qualified as follows:

- If sample concentration was < the quantitation limit (QL) and ≤ the Action Level, qualify the result as a nondetect (U) at the QL.
- If sample concentration was > the QL and ≤ the Action Level, qualify the result as not detected (U) at the reported concentration.
- If the sample concentration was > the QL and > the Action Level, qualification of the data was not required.

The positive results for methylene chloride in samples SP-CSD9N, SP-CSE9N, SP-CSD9S2, SP-CSF9S2, SP-CSF9N, and SP-CSE9S2 were qualified as nondetect (U) at the quantitation limit due to laboratory blank contamination.

SVOC

Target compounds were not detected in the SVOC method blank sample.

Surrogate Recoveries

All criteria were met in the VOC and SVOC samples.

MS/MSD Results

VOC and SVOC

MS/MSD analyses were not associated with the samples in this data set.

Internal Standards

All criteria were met in the VOC analyses.

SVOC

The following table lists the internal standards recovered outside of control limits in the SVOC analyses and the resulting validation actions.

Sample	Internal Standard	Recovery (%)	Validation Actions
SP-CSD9N	Perylene-d12	252	Estimate (J) the positive results for benzo(b)fluoranthene, benzo(k)fluoranthene, benzo(a)pyrene, indeno(123-cd)pyrene, dibenzo(ah)anthracene, and benzo(ghi)perylene.
SP-CSF9S2	Perylene-d12	228	Estimate (J) the positive results for benzo(b)fluoranthene, benzo(k)fluoranthene, benzo(a)pyrene, indeno(123-cd)pyrene, dibenzo(ah)anthracene, and benzo(ghi)perylene.
SP-CSE9S2	Perylene-d12	208	Estimate (J) the positive results for benzo(b)fluoranthene, benzo(k)fluoranthene, benzo(a)pyrene, indeno(123-cd)pyrene, dibenzo(ah)anthracene, and benzo(ghi)perylene.
SP-CSD9S2	Perylene-d12	234	Estimate (J) the positive results for benzo(b)fluoranthene, benzo(k)fluoranthene, benzo(a)pyrene, indeno(123-cd)pyrene, dibenzo(ah)anthracene, and benzo(ghi)perylene.

Sample	Internal Standard	Recovery (%)	Validation Actions
SP-CSE9N	Perylene-d12	229	Validation actions were not required as the affected compound results were nondetect and therefore not affected by the potential high bias.
SP-CSF9N	Perylene-d12	242	Estimate (J) the positive results for benzo(b)fluoranthene, benzo(k)fluoranthene, benzo(a)pyrene, indeno(123-cd)pyrene, and benzo(ghi)perylene.

LCS Results

VOC

All criteria were met in the VOC analyses.

SVOC

The following table lists the compounds recovered outside of the LCS analyses and the resulting actions.

Compound	Recovery (%)	Control Limits	Validation Actions
2,4-dinitrophenol	75	0-36	Validation actions were not required as the results were nondetect and therefore not affected by the potential high bias.
4,6-dinitro-2-methylphenol	91	0-89	

Moisture Content

Samples SP-CSE9N (44.2), SP-CSF9S2 (47.9), and SP-CSF9N (47.7) had percent solids less than 50. The positive and nondetect results for samples SP-CSE9N, SP-CSF9S2, and SP-CSF9N were qualified as estimated (J/UJ).

Field Duplicate Results

A field duplicate pair was not associated with this sample set.

Quantitation Limits and Data Assessment

VOC

Results were reported which were below the lowest calibration standard level (QL) and above the method detection limit (MDL) in the VOC analyses. These results were qualified by the

laboratory (J). These results were qualified as estimated (J) due to uncertainty at the low end of calibration.

SVOC

Results were reported which were below the reporting limit (RL) and above the method detection limit (MDL) in the SVOC analyses. These results were qualified as estimated (J) by the laboratory. The results for naphthalene and fluorene in sample SP-CSD9S2 and fluorene in sample SP-CSF9S2 were less than the reporting limit and estimated (J) by the laboratory. However, these compound results were above the lowest associated calibration standard; therefore, the 'J' qualifier was removed by the validator.

Samples SP-CSD9N (10-fold), SP-CSD9S2 (2-fold), SP-CSF9S2 (10-fold), and SP-CSE9S2 (5-fold) were analyzed on dilution due to high target compound levels. The quantitation levels were elevated in these samples.

Sample Quantitation and Compound Identification

VOC and SVOC

Calculations were spot-checked; no discrepancies were noted in the VOC and SVOC analyses.

Samples Reviewed and Evaluation Summary

FIELD ID	LAB ID	FRACTIONS VALIDATED
SP-CSD9T	220-2558-1	VOC, SVOC
SP-CSD9B	220-2558-2	VOC, SVOC
SP-CSD9SWS	220-2558-3	VOC, SVOC
SP-CSD9SWN	220-2558-4	VOC, SVOC

Associated QC Samples:	Field/Trip Blanks:	None associated
	Field Duplicate pair:	None associated

The above-listed soil samples were collected on August 29, 2007 and were analyzed for volatile organic compounds (VOCs) by SW-846 method 8260B and semivolatile organic compounds (SVOCs) by SW-846 method 8270C. The data validation was based on the USEPA Region II Standard Operating Procedure (SOP) for the Validation of Organic Data Acquired using SW-846 Method 8260B, SOP No. HW-24, Revision 1, June 1999 and the USEPA Region II Standard Operating Procedure (SOP) for the Validation of Organic Data Acquired using SW-846 Method 8270C, SOP No. HW-22, Revision 2, June 2001.

The organic data were evaluated based on the following parameters:

*	•	Data Completeness
	•	Holding Times and Sample Preservation
	•	Gas Chromatography/Mass Spectrometry (GC/MS) Tunes
	•	Initial and Continuing Calibrations
	•	Blanks
*	•	Surrogate Recoveries
NA	•	Matrix Spike/Matrix Spike Duplicate (MS/MSD) Results
	•	Internal Standards
	•	Laboratory Control Sample (LCS) Results
*	•	Moisture Content
NA	•	Field Duplicate Results
	•	Quantitation Limits and Data Assessment
*	•	Sample Quantitation and Compound Identification

* - All criteria were met.

NA – A matrix spike/matrix spike duplicate and field duplicate pair were not associated with this sample set.

All results are usable for project objectives.

Qualifications were not applied to the data as a result of sampling error.
Qualifications applied to the data as a result of analytical error are discussed below.

- Potential uncertainty exists for select VOC and SVOC results which were below the lowest calibration standard and quantitation limit. The results were qualified as estimated (J) by the laboratory. These results can be used for project objectives as estimated values, which may have a minor impact on the data usability.

- The SVOC positive and/or nondetect results in all samples were qualified as estimated (J/UJ) due to GC/MS Tune deficiencies. The results can be used for project objectives as estimated values and the nondetects with estimated quantitation limits, which may have a minor impact on the data usability.

- The VOC positive results for methylene chloride in all samples were qualified as a nondetect (U) at the quantitation limit (QL) due to laboratory blank contamination. The results are still usable for project objectives as nondetects. This qualification may have a minor impact on the data usability.

- The VOC positive results for acetone in samples SP-CSD9T, SP-CSD9B and SP-CSD9SWN were qualified as estimated (J) due to calibration nonconformances. The direction of the bias cannot be determined from these nonconformances. The results can be used for project objectives as estimated values and nondetects with estimated quantitation limits, which may have a minor impact on the data usability.

- The VOC positive and nondetect results for bromomethane and chloromethane in all samples were qualified as estimated (J/UJ) due to calibration nonconformances. The direction of the bias cannot be determined from these nonconformances. The results can be used for project objectives as estimated values and nondetects with estimated quantitation limits which may have a minor impact on the data usability.

- The SVOC nondetect results for bis(2-chloroethyl)ether, 2-chlorophenol, 1,3-dichlorobenzene, benzyl chloride, 1,2-dichlorobenzene, 2,2'-oxybis(1-chloropropane), hexachloroethane, 4-methylphenol, 2,4,5-trichlorophenol and benzo(ghi)perylene in all samples were qualified as estimated (UJ) due to calibration nonconformances. The direction of the bias cannot be determined from these nonconformances. The nondetects can be used for project objectives as estimated quantitation limits which may have a minor impact on the data usability.

The validation findings were based on the following information.

Data Completeness

The data package was complete as defined under the requirements for the CLP-like deliverables for the VOC and SVOC analyses.

Holding Times and Sample Preservation

All holding time criteria were met in the VOC and SVOC analyses.

The cooler temperature was recorded at 18.4 degrees upon receipt at the laboratory. The samples were collected on 8/29/07 and remained on ice until they were hand delivered to the laboratory on 8/29/07. The temperature blank, which was at ambient temperature, was placed in the cooler immediately before transit to the laboratory. As the delivery time was less than one hour, it is believed that the temperature blank was not able to reach the sample temperature before arrival at the laboratory. As the samples were stored on ice and arrived at the laboratory with ice present in the cooler, validation actions were not taken on the basis of the high recorded cooler temperature.

GC/MS Tunes

VOC:

All criteria were met in the VOC analyses.

SVOC:

The DFTPP analyzed 8/30/07 on instrument MSU had the ion at m/z 51 outside of the required QC window. The relative abundance for this ion was 25.1 and should have been 30-80% of mass 198. The National Functional Guidelines, January 2005, states professional judgement may be used when evaluating ion abundance criteria. It states that for the ions at m/z 51, 127 and 275, the actual relative abundance is not as critical. It is recommended to estimate the positive and/or nondetect results for samples associated with this tune. All SVOC samples in 220-2558 were associated with this DFTPP tune.

Initial and Continuing Calibrations

VOC

Compounds that did not meet criteria in the VOC initial and continuing calibrations are summarized in the following table.

Instrument ID MSN Compound	IC 08/14/07	CC 08/30/07
acetone	X (27.4%)	
2-butanone	X (15.9%)	
Bromomethane		XX (43.8%)
chloromethane		XX (21.4%)
Samples Affected	All samples	All samples

X = Initial calibration (IC) relative standard deviation (%RSD) > 15; estimate (J) positive results only.
XX = Continuing calibration (CC) percent difference (%D) > 20; estimate (J/UJ) positive and nondetect results.
XXX = Continuing calibration (CC) percent difference (%D) > 90; estimate (J) positive results and reject (R) nondetect results.
+ = Response factor (RRF) < 0.05; Estimate (J) positive results and reject (R) nondetect results.

The VOC positive results for acetone in samples SP-CSD9T, SP-CSD9B and SP-CSD9SWN were qualified as estimated (J) due to calibration nonconformances.

The VOC positive and nondetect results for bromomethane and chloromethane in all samples were qualified as estimated (J/UJ) due to calibration nonconformances.

SVOC

Compounds that did not meet criteria in the SVOC initial and continuing calibrations are summarized in the following table.

Instrument ID MSU Compound	IC 7/11/07	CC 08/30/07
bis(2-chloroethyl)ether		XX (23.2%)
2-chlorophenol		XX (26.1%)
1,3-dichlorobenzene		XX (24.1%)
benzyl alcohol		XX (34.4%)
1,2-dichlorobenzene		XX (25.8%)
2,2'-oxybis(1-chloropropane)		XX (28.8%)
hexachloroethane		XX (33.8%)
4-methylphenol		XX (30.0%)

Instrument ID MSU Compound	IC 7/11/07	CC 08/30/07
hexachlorocyclopentadiene	X (18.2%)	
2,4,5-trichlorophenol		XX (23.8%)
2,4-dinitrophenol	X (17.1%)	
benzo(ghi)perylene		XX (32.5%)
Samples Affected	All samples	All samples

X = Initial calibration (IC) relative standard deviation (%RSD) > 15; estimate (J) positive results only.
XX = Continuing calibration (CC) percent difference (%D) > 20; estimate (J/UJ) positive and nondetect results.
XXX = Continuing calibration (CC) percent difference (%D) > 90; estimate (J) positive results and reject (R) nondetect results.
+ = Response factor (RRF) < 0.05; Estimate (J) positive results and reject (R) nondetect results.

The SVOC nondetect results for bis(2-chloroethyl)ether, 2-chlorophenol, 1,3-dichlorobenzene, benzyl chloride, 1,2-dichlorobenzene, 2,2'-oxybis(1-chloropropane), hexachloroethane, 4-methylphenol, 2,4,5-trichlorophenol and benzo(ghi)perylene in all samples were qualified as estimated (UJ) due to calibration nonconformances. The direction of the bias cannot be determined from these nonconformances. The nondetects can be used for project objectives as estimated quantitation limits which may have a minor impact on the data usability.

Blanks

VOCs

Methylene chloride was detected in the VOC method blank. The presence of blank contamination indicates that false positives may exist for this compound in the associated samples. Action Levels (ALs) were established at 10x (for common contaminants) and 5x (for other compounds) the concentrations detected. The following table summarizes the AL.

Compound	Type of Blank	Associated Samples	Maximum Concentration	Action Level
Methylene chloride	Method	All samples	1.8 ug/kg	18 ug/kg

Sample results were qualified as follows:

- If sample concentration was < the quantitation limit (QL) and ≤ the Action Level, qualify the result as a nondetect (U) at the QL.
- If sample concentration was > the QL and ≤ the Action Level, qualify the result as not detected (U) at the reported concentration.
- If the sample concentration was > the QL and > the Action Level, qualification of the data was not required.

The positive results for methylene chloride in all samples were qualified as a nondetect (U) at the quantitation limit (QL) due to laboratory blank contamination. The results are still usable for project objectives as nondetects. This qualification may have a minor impact on the data usability.

SVOC

Target compounds were not detected in the SVOC method blank sample.

Surrogate Recoveries

All criteria were met in the VOC and SVOC samples.

MS/MSD Results

VOC and SVOC

MS/MSD analyses were not associated with the samples in this data set.

Internal Standards

All criteria were met in the VOC and SVOC samples.

LCS Results

VOC

All criteria were met in the VOC analyses.

SVOC

The following table lists the compounds recovered outside of the LCS analyses and the resulting actions.

Compound	Recovery (%)	Control Limits	Validation Actions
Phenol	121	46-110	Validation actions were not required as the results were nondetect and therefore not affected by the potential high bias.
Bis(2-chloroethyl)ether	129	43-106	
1,2-dichlorobenzene	109	38-106	
2-methylphenol	121	42-113	
hexachloroethane	114	34-106	
N-nitrosodi-n-propylamine	115	42-112	
4-methylphenol	123	45-117	
hexachlorocyclopentadiene	117	5-106	
2-chloronaphthalene	112	46-111	
dimethylphthalate	121	50-121	
2,4-dinitrophenol	73	0-36	
4,6-dinitro-2-methylphenol	94	0-89	
pentachlorophenol	124	0-116	

Moisture Content

All criteria were met for the samples in this data package.

Field Duplicate Results

A field duplicate pair was not associated with this sample set.

Quantitation Limits and Data Assessment

VOC

Results were reported which were below the lowest calibration standard level (QL) and above the method detection limit (MDL) in the VOC analyses. These results were qualified by the laboratory (J). These results were qualified as estimated (J) due to uncertainty at the low end of calibration.

SVOC

Results were reported which were below the reporting limit (RL) and above the method detection limit (MDL) in the SVOC analyses. These results were qualified as estimated (J) by the laboratory. The results for benzo (a) anthracene and chrysene in sample SP-CSD9SWS, were less than the reporting limit and estimated (J) by the laboratory. However, these compound results were above the lowest associated calibration standard; therefore, the 'J' qualifier was removed by the validator.

Sample SP-CSD9SWS (5-fold) was analyzed on dilution due to high target compound levels. The quantitation levels were elevated in these samples.

Sample Quantitation and Compound Identification

VOC and SVOC

Calculations were spot-checked; no discrepancies were noted in the VOC and SVOC analyses.

Date: October 8, 2007

Samples Reviewed and Evaluation Summary

FIELD ID	LAB ID	FRACTIONS VALIDATED
CSE10	220-2582-1	VOC, SVOC
CSG11W	220-2582-2	VOC, SVOC
CSG11E	220-2582-3	VOC, SVOC
Associated QC Samples:	Field/Trip Blanks:	None associated
	Field Duplicate pair:	None associated

The above-listed soil samples were collected on August 30, 2007 and were analyzed for volatile organic compounds (VOCs) by SW-846 method 8260B and semivolatile organic compounds (SVOCs) by SW-846 method 8270C. The data validation was based on the USEPA Region II Standard Operating Procedure (SOP) for the Validation of Organic Data Acquired using SW-846 Method 8260B, SOP No. HW-24, Revision 1, June 1999 and the USEPA Region II Standard Operating Procedure (SOP) for the Validation of Organic Data Acquired using SW-846 Method 8270C, SOP No. HW-22, Revision 2, June 2001.

The organic data were evaluated based on the following parameters:

*	•	Data Completeness
*	•	Holding Times and Sample Preservation
*	•	Gas Chromatography/Mass Spectrometry (GC/MS) Tunes
	•	Initial and Continuing Calibrations
	•	Blanks
*	•	Surrogate Recoveries
NA	•	Matrix Spike/Matrix Spike Duplicate (MS/MSD) Results
*	•	Internal Standards
	•	Laboratory Control Sample (LCS) Results
*	•	Moisture Content
NA	•	Field Duplicate Results
	•	Quantitation Limits and Data Assessment
*	•	Sample Quantitation and Compound Identification

* - All criteria were met.

NA – A matrix spike/matrix spike duplicate and field duplicate pair were not associated with this sample set.

All results are usable for project objectives.

Qualifications were not applied to the data as a result of sampling error.
Qualifications applied to the data as a result of analytical error are discussed below.

- Potential uncertainty exists for select VOC and SVOC results, which were below the lowest calibration standard and quantitation limit. The results were qualified as estimated (J) by the laboratory. These results can be used for project objectives as estimated values, which may have a minor impact on the data usability.

- The VOC positive results for methylene chloride in all samples were qualified as a nondetect (U) at the quantitation limit (QL) due to laboratory blank contamination. The results are still usable for project objectives as nondetects. This qualification may have a minor impact on the data usability.

- The VOC positive results for acetone in all samples and 2-butanone in sample CSG11E were qualified as estimated (J) due to calibration nonconformances. The direction of the bias cannot be determined from these nonconformances. The results can be used for project objectives as estimated values and nondetects with estimated quantitation limits, which may have a minor impact on the data usability.

- The VOC positive and nondetect results for acetone and bromomethane in all samples were qualified as estimated (J/UJ) due to calibration nonconformances. The direction of the bias cannot be determined from these nonconformances. The results can be used for project objectives as estimated values and nondetects with estimated quantitation limits, which may have a minor impact on the data usability.

- The SVOC nondetect results for dibenz(a,h)anthracene, hexachlorocyclopentadiene, indeno(1,2,3-cd)pyrene, 3,3-dichlorobenzidiene and benzo(g,h,i)perylene in all samples were qualified as estimated (UJ) due to calibration nonconformances. The direction of the bias cannot be determined from these nonconformances. The nondetects can be used for project objectives as estimated quantitation limits which may have a minor impact on the data usability.

The validation findings were based on the following information.

Data Completeness

The data package was complete as defined under the requirements for the CLP-like deliverables for the VOC and SVOC analyses.

Holding Times and Sample Preservation

All holding time and sample preservation criteria were met in the VOC and SVOC analyses.

GC/MS Tunes

All criteria were met in the VOC and SVOC analyses.

Initial and Continuing Calibrations

VOC

Compounds that did not meet criteria in the VOC initial and continuing calibrations are summarized in the following table.

Instrument ID MSN Compound	IC 08/14/07	CC 09/04/07
acetone	X (27.4%)	XX(25.8%)
2-butanone	X (15.9%)	XX(20.1%)
Samples Affected	All samples	All samples

X = Initial calibration (IC) relative standard deviation (%RSD) > 15; estimate (J) positive results only.
XX = Continuing calibration (CC) percent difference (%D) > 20; estimate (J/UJ) positive and nondetect results.
XXX = Continuing calibration (CC) percent difference (%D) > 90; estimate (J) positive results and reject (R) nondetect results.
+ = Response factor (RRF) < 0.05; Estimate (J) positive results and reject (R) nondetect results.

The VOC positive results for acetone in all samples and 2-butanone in sample CSG11E were qualified as estimated (J) due to calibration nonconformances.

The VOC positive and nondetect results for acetone and bromomethane in all samples were qualified as estimated (J/UJ) due to calibration nonconformances.

SVOC

Compounds that did not meet criteria in the SVOC initial and continuing calibrations are summarized in the following table.

Instrument ID MSA Compound	IC 8/28/07	CC 9/4/07
2,4-dinitrophenol	X (15.9%)	
dibenz(a,h)anthracene		XX (30.7%)
hexachlorocyclopentadiene		XX (28.0%)
indeno(1,2,3-cd)pyrene		XX (27.6%)
3,3'-dichlorobenzidiene		XX (24.6%)
benzo(ghi)perylene		XX (30.1%)
Samples Affected	All samples	All samples

X = Initial calibration (IC) relative standard deviation (%RSD) > 15; estimate (J) positive results only.
XX = Continuing calibration (CC) percent difference (%D) > 20; estimate (J/UJ) positive and nondetect results.
XXX = Continuing calibration (CC) percent difference (%D) > 90; estimate (J) positive results and reject (R) nondetect results.
+ = Response factor (RRF) < 0.05; Estimate (J) positive results and reject (R) nondetect results.

The SVOC nondetect results for dibenz(a,h)anthracene, hexachlorocyclopentadiene, indeno(1,2,3-cd)pyrene, 3,3-dichlorobenzidiene and benzo(g,h,i)perylene in all samples were qualified as estimated (UJ) due to calibration nonconformances.

Blanks

VOCs

Methylene chloride was detected in the VOC method blank. The presence of blank contamination indicates that false positives may exist for this compound in the associated samples. Action Levels (ALs) were established at 10x (for common contaminants) and 5x (for other compounds) the concentrations detected. The following table summarizes the AL.

Compound	Type of Blank	Associated Samples	Maximum Concentration	Action Level
Methylene chloride	Method	All samples	2.1 ug/kg	21 ug/kg

Sample results were qualified as follows:

- If sample concentration was < the quantitation limit (QL) and ≤ the Action Level, qualify the result as a nondetect (U) at the QL.
- If sample concentration was > the QL and ≤ the Action Level, qualify the result as not detected (U) at the reported concentration.
- If the sample concentration was > the QL and > the Action Level, qualification of the data was not required.

The positive results for methylene chloride in all samples were qualified as a nondetect (U) at the quantitation limit (QL) due to laboratory blank contamination.

SVOC

Target compounds were not detected in the SVOC method blank sample.

Surrogate Recoveries

All criteria were met in the VOC and SVOC samples.

MS/MSD Results

VOC and SVOC

MS/MSD analyses were not associated with the samples in this data set.

Internal Standards

All criteria were met in the VOC and SVOC samples.

LCS Results

VOC

All criteria were met in the VOC analyses.

SVOC

The following table lists the compounds recovered outside of the LCS analyses and the resulting actions.

Compound	Recovery (%)	Control Limits	Validation Actions
2,4-dinitrophenol	57	0-36	Validation actions were not required as the results were nondetect and therefore not affected by the potential high bias.

Moisture Content

All criteria were met for the samples in this data package.

Field Duplicate Results

A field duplicate pair was not associated with this sample set.

Quantitation Limits and Data Assessment

VOC

Results were reported which were below the lowest calibration standard level (QL) and above the method detection limit (MDL) in the VOC analyses. These results were qualified by the laboratory (J). These results were qualified as estimated (J) due to uncertainty at the low end of calibration.

SVOC

Results were reported which were below the reporting limit (RL) and above the method detection limit (MDL) in the SVOC analyses. These results were qualified as estimated (J) by the laboratory. These results were qualified as estimated (J) due to uncertainty at the low end of calibration.

Sample SP-CSG11W (4-fold) was analyzed on dilution due to high target compound levels. The quantitation levels were elevated in these samples.

Sample Quantitation and Compound Identification

VOC and SVOC

Calculations were spot-checked; no discrepancies were noted in the VOC and SVOC analyses.

Date: October 8, 2007

Samples Reviewed and Evaluation Summary

FIELD ID	LAB ID	FRACTIONS VALIDATED
SP-CSE-10NE	220-2635-1	VOC, SVOC
Associated QC Samples:	Field/Trip Blanks:	None associated
	Field Duplicate pair:	None associated

The above-listed soil samples were collected on September 7, 2007 and were analyzed for volatile organic compounds (VOCs) by SW-846 method 8260B and semivolatile organic compounds (SVOCs) by SW-846 method 8270C. The data validation was based on the USEPA Region II Standard Operating Procedure (SOP) for the Validation of Organic Data Acquired using SW-846 Method 8260B, SOP No. HW-24, Revision 1, June 1999 and the USEPA Region II Standard Operating Procedure (SOP) for the Validation of Organic Data Acquired using SW-846 Method 8270C, SOP No. HW-22, Revision 2, June 2001.

The organic data were evaluated based on the following parameters:

*	•	Data Completeness
*	•	Holding Times and Sample Preservation
*	•	Gas Chromatography/Mass Spectrometry (GC/MS) Tunes
	•	Initial and Continuing Calibrations
	•	Blanks
*	•	Surrogate Recoveries
NA	•	Matrix Spike/Matrix Spike Duplicate (MS/MSD) Results
*	•	Internal Standards
	•	Laboratory Control Sample (LCS) Results
*	•	Moisture Content
NA	•	Field Duplicate Results
	•	Quantitation Limits and Data Assessment
*	•	Sample Quantitation and Compound Identification

* - All criteria were met.

NA – A matrix spike/matrix spike duplicate and field duplicate pair were not associated with this sample set.

All results are usable for project objectives.

Qualifications were not applied to the data as a result of sampling error.
Qualifications applied to the data as a result of analytical error are discussed below.

- Potential uncertainty exists for select VOC and SVOC results, which were below the lowest calibration standard and quantitation limit. The results were qualified as estimated (J) by the laboratory. These results can be used for project objectives as estimated values, which may have a minor impact on the data usability.

- The VOC positive results for acetone and methylene chloride in sample SP-CSE-10NE were qualified as a nondetect (U) at the quantitation limit (QL) due to laboratory blank contamination. The results are still usable for project objectives as nondetects. This qualification may have a minor impact on the data usability.

- The VOC positive and nondetect results for bromomethane, carbon disulfide and chloromethane in sample SP-CSE-10NE were qualified as estimated (J/UJ) due to calibration nonconformances. The direction of the bias cannot be determined from these nonconformances. The results can be used for project objectives as estimated values and nondetects with estimated quantitation limits, which may have a minor impact on the data usability.

- The SVOC nondetect results for 2,4-dinitrophenol in sample SP-CSE-10NE was qualified as estimated (UJ) due to calibration nonconformances. The direction of the bias cannot be determined from these nonconformances. The nondetect can be used for project objectives as an estimated quantitation limit, which may have a minor impact on the data usability.

The validation findings were based on the following information.

Data Completeness

The data package was complete as defined under the requirements for the CLP-like deliverables for the VOC and SVOC analyses.

Holding Times and Sample Preservation

All holding time and sample preservation criteria were met in the VOC and SVOC analyses.

GC/MS Tunes

All criteria were met in the VOC and SVOC analyses.

Initial and Continuing Calibrations

VOC

Compounds that did not meet criteria in the VOC initial and continuing calibrations are summarized in the following table.

Instrument ID MSN Compound	IC 08/14/07	CC 09/10/07
chloromethane		XX(20.1%)
bromomethane		XX(21.4%)
acetone	X (27.4%)	
carbon disulfide		XX(22.4%)
2-butanone	X (15.9%)	
Samples Affected	SP-CSE-10NE	SP-CSE-10NE

X = Initial calibration (IC) relative standard deviation (%RSD) > 15; estimate (J) positive results only.
XX = Continuing calibration (CC) percent difference (%D) > 20; estimate (J/UJ) positive and nondetect results.
XXX = Continuing calibration (CC) percent difference (%D) > 90; estimate (J) positive results and reject (R) nondetect results.
+ = Response factor (RRF) < 0.05; Estimate (J) positive results and reject (R) nondetect results.

The VOC positive and nondetect results for bromomethane, carbon disulfide and chloromethane in sample SP-CSE-10NE were qualified as estimated (J/UJ) due to calibration nonconformances.

SVOC

Compounds that did not meet criteria in the SVOC initial and continuing calibrations are summarized in the following table.

Instrument ID MSA Compound	IC 9/5/07	CC 9/10/07
2,4-dinitrophenol	X (15.1%)	
Samples Affected	SP-CSE-10NE	SP-CSE-10NE

X = Initial calibration (IC) relative standard deviation (%RSD) > 15; estimate (J) positive results only.
XX = Continuing calibration (CC) percent difference (%D) > 20; estimate (J/UJ) positive and nondetect results.

XXX = Continuing calibration (CC) percent difference (%D) > 90; estimate (J) positive results and reject (R) nondetect results.
+ = Response factor (RRF) < 0.05; Estimate (J) positive results and reject (R) nondetect results.

The SVOC nondetect results for 2,4-dinitrophenol in sample SP-CSE-10NE was qualified as estimated (UJ) due to calibration nonconformances.

Blanks

VOCs

Acetone and methylene chloride were detected in the VOC method blank. The presence of blank contamination indicates that false positives may exist for this compound in the associated samples. Action Levels (ALs) were established at 10x (for common contaminants) and 5x (for other compounds) the concentrations detected. The following table summarizes the AL.

Compound	Type of Blank	Associated Samples	Maximum Concentration	Action Level
Acetone	Method	SP-CSE-10NE	3.5 ug/kg	35 ug/kg
methylene chloride			3.8 ug/kg	38 ug/kg

Sample results were qualified as follows:

- If sample concentration was < the quantitation limit (QL) and ≤ the Action Level, qualify the result as a nondetect (U) at the QL.
- If sample concentration was > the QL and ≤ the Action Level, qualify the result as not detected (U) at the reported concentration.
- If the sample concentration was > the QL and > the Action Level, qualification of the data was not required.

The positive results for acetone and methylene chloride in sample SP-CSE-10NE were qualified as a nondetect (U) at the quantitation limit (QL) due to laboratory blank contamination.

SVOC

Target compounds were not detected in the SVOC method blank sample.

Surrogate Recoveries

All criteria were met in the VOC and SVOC samples.

MS/MSD Results

VOC and SVOC

MS/MSD analyses were not associated with the samples in this data set.

Internal Standards

All criteria were met in the VOC and SVOC samples.

LCS Results

VOC

All criteria were met in the VOC analyses.

SVOC

The following table lists the compounds recovered outside of the LCS analyses and the resulting actions.

Compound	Recovery (%)	Control Limits	Validation Actions
2,4-dinitrophenol	63	0-36	Validation actions were not required as the results were nondetect and therefore not affected by the potential high bias.

Moisture Content

All criteria were met for the samples in this data package.

Field Duplicate Results

A field duplicate pair was not associated with this sample set.

Quantitation Limits and Data Assessment

VOC

Results were reported which were below the lowest calibration standard level (QL) and above the method detection limit (MDL) in the VOC analyses. These results were qualified by the

laboratory (J). These results were qualified as estimated (J) due to uncertainty at the low end of calibration.

SVOC

Results were reported which were below the reporting limit (RL) and above the method detection limit (MDL) in the SVOC analyses. These results were qualified as estimated (J) by the laboratory.

Samples were analyzed at a 1:1 dilution.

Sample Quantitation and Compound Identification

VOC and SVOC

Calculations were spot-checked; no discrepancies were noted in the VOC and SVOC analyses.

Project: Starlight Park
Laboratory: Test America, Shelton, CT
Report No.: 220-2502
Reviewer: Lisa McDonagh/GEI Consultants
Date: October 8, 2007

Samples Reviewed and Evaluation Summary

FIELD ID	LAB ID	FRACTIONS VALIDATED
SP-CSG13NW	220-2502-1	VOC, SVOC
SP-CSG13NE	220-2502-2	VOC, SVOC
Associated QC Samples:	Field/Trip Blanks:	None associated
	Field Duplicate pair:	None associated

The above-listed soil samples were collected on August 22, 2007 and were analyzed for volatile organic compounds (VOCs) by SW-846 method 8260B and semivolatile organic compounds (SVOCs) by SW-846 method 8270C. The data validation was based on the USEPA Region II Standard Operating Procedure (SOP) for the Validation of Organic Data Acquired using SW-846 Method 8260B, SOP No. HW-24, Revision 1, June 1999 and the USEPA Region II Standard Operating Procedure (SOP) for the Validation of Organic Data Acquired using SW-846 Method 8270C, SOP No. HW-22, Revision 2, June 2001.

The organic data were evaluated based on the following parameters:

*	•	Data Completeness
*	•	Holding Times and Sample Preservation
*	•	Gas Chromatography/Mass Spectrometry (GC/MS) Tunes
	•	Initial and Continuing Calibrations
	•	Blanks
*	•	Surrogate Recoveries
NA	•	Matrix Spike/Matrix Spike Duplicate (MS/MSD) Results
	•	Internal Standards
	•	Laboratory Control Sample (LCS) Results
*	•	Moisture Content
NA	•	Field Duplicate Results
	•	Quantitation Limits and Data Assessment
*	•	Sample Quantitation and Compound Identification

* - All criteria were met.

NA – A matrix spike/matrix spike duplicate and field duplicate pair were not associated with this sample set.

All results are usable for project objectives.

Qualifications were not applied to the data as a result of sampling error.
Qualifications applied to the data as a result of analytical error are discussed below.

- Potential uncertainty exists for select VOC and SVOC results which were below the lowest calibration standard and quantitation limit. The results were qualified as estimated (J) by the laboratory. These results can be used for project objectives as estimated values which may have a minor impact on the data usability.

- The VOC positive results for acetone and methylene chloride in samples SP-CSG13NW and SP-CSG13NE were qualified as a nondetect (U) at the quantitation limit (QL) due to laboratory blank contamination. The results are still usable for project objectives as nondetects. This qualification may have a minor impact on the data usability.

- The VOC positive and nondetect results for acetone and 2-butanone in all samples were qualified as estimated (J/UJ) due to calibration nonconformances. The direction of the bias cannot be determined from these nonconformances. The results can be used for project objectives as estimated values and nondetects with estimated quantitation limits which may have a minor impact on the data usability.

- The SVOC nondetect results for 2,4-dinitrophenol in all samples were qualified as estimated (UJ) due to calibration nonconformances. The direction of the bias cannot be determined from these nonconformances. The nondetects can be used for project objectives as estimated quantitation limits which may have a minor impact on the data usability.

- The SVOC positive results for benzo(b)fluoranthene, benzo(k)fluoranthene, benzo(a)pyrene, indeno(1,2,3-cd)pyrene, dibenz(a,h)anthracene and benzo(g,h,i)perylene in all samples were qualified as estimated (J) due to high internal standard recoveries. The results can be used for project objectives as estimated values , which may have a minor impact on the data usability.

The validation findings were based on the following information.

Data Completeness

The data package was complete as defined under the requirements for the CLP-like deliverables for the VOC and SVOC analyses.

Holding Times and Sample Preservation

All holding time and sample preservation criteria were met in the VOC and SVOC analyses.

GC/MS Tunes

All criteria were met in the VOC and SVOC analyses.

Initial and Continuing Calibrations

VOC

Compounds that did not meet criteria in the VOC initial and continuing calibrations are summarized in the following table.

Instrument ID MSN Compound	IC 08/14/07	CC 08/23/07
acetone	X (27.4%)	XX (45.6%)
2-butanone	X (15.9%)	XX (31.7%)
Samples Affected	All samples	All samples

X = Initial calibration (IC) relative standard deviation (%RSD) > 15; estimate (J) positive results only.
XX = Continuing calibration (CC) percent difference (%D) > 20; estimate (J/UJ) positive and nondetect results.
XXX = Continuing calibration (CC) percent difference (%D) > 90; estimate (J) positive results and reject (R) nondetect results.
+ = Response factor (RRF) < 0.05; Estimate (J) positive results and reject (R) nondetect results.

The VOC positive and nondetect results for acetone and 2-butanone in all samples were qualified as estimated (J/UJ) due to calibration nonconformances.

SVOC

Compounds that did not meet criteria in the SVOC initial and continuing calibrations are summarized in the following table.

Instrument ID MSA Compound	IC 08/22/07	CC 08/23/07
hexachlorocyclopentadiene	X (16.0%)	

Instrument ID MSA Compound	IC 08/22/07	CC 08/23/07
2,4-dinitrophenol	X (25.2%)	XX (21.6%)
pentachlorophenol	X (19.4%)	
bis(2-ethylhexyl)phthalate		
Samples Affected	All samples	All samples

X = Initial calibration (IC) relative standard deviation (%RSD) > 15; estimate (J) positive results only.
XX = Continuing calibration (CC) percent difference (%D) > 20; estimate (J/UJ) positive and nondetect results.
XXX = Continuing calibration (CC) percent difference (%D) > 90; estimate (J) positive results and reject (R) nondetect results.
+ = Response factor (RRF) < 0.05; Estimate (J) positive results and reject (R) nondetect results.

The SVOC nondetect results for 2,4-dinitrophenol in all samples were qualified as estimated (UJ) due to calibration nonconformances.

Blanks

VOCs

Acetone and methylene chloride were detected in the VOC method blank. The presence of blank contamination indicates that false positives may exist for this compound in the associated samples. Action Levels (ALs) were established at 10x (for common contaminants) and 5x (for other compounds) the concentrations detected. The following table summarizes the AL.

Compound	Type of Blank	Associated Samples	Maximum Concentration	Action Level
Acetone	Method	All samples	4.9 ug/kg	49 ug/kg
Methylene chloride	Method	All samples	1.5 ug/kg	15 ug/kg

Sample results were qualified as follows:

- If sample concentration was < the quantitation limit (QL) and ≤ the Action Level, qualify the result as a nondetect (U) at the QL.
- If sample concentration was > the QL and ≤ the Action Level, qualify the result as not detected (U) at the reported concentration.
- If the sample concentration was > the QL and > the Action Level, qualification of the data was not required.

The positive results for acetone and methylene chloride in samples SP-CSG13NW and SP-CSG13NE were qualified as a nondetect (U) at the quantitation limit (QL) due to laboratory blank contamination.

SVOC

Target compounds were not detected in the SVOC method blank sample.

Surrogate Recoveries

All criteria were met in the VOC and SVOC samples.

MS/MSD Results

VOC and SVOC

MS/MSD analyses were not associated with the samples in this data set.

Internal Standards

VOC

All criteria were met in the VOC analyses.

SVOC

The following table lists the internal standards recovered outside of control limits in the SVOC analyses and the resulting validation actions.

Sample	Internal Standard	Recovery (%)	Validation Actions
SP-CSG13NW	Perylene-d12	267	Estimate (J) the positive results for benzo(b)fluoranthene, benzo(k)fluoranthene, benzo(a)pyrene, indeno(123-cd)pyrene, dibenz(a,h)anthracene and benzo(ghi)perylene.
SP-CSG13NE	Perylene-d12	280	Estimate (J) the positive results for benzo(b)fluoranthene, benzo(k)fluoranthene, benzo(a)pyrene, indeno(123-cd)pyrene, dibenz(a,h)anthracene and benzo(ghi)perylene.

LCS Results

VOC

All criteria were met in the VOC analyses.

SVOC

The following table lists the compounds recovered outside of control limits for the LCS analyses and the resulting actions.

Compound	Recovery (%)	Control Limits	Validation Actions
2,4-dinitrophenol	75	0-36	Validation actions were not required as the results were nondetect and therefore not affected by the potential high bias.
4,6-dinitro-2-methylphenol	91	0-89	

Moisture Content

All criteria were met for the samples in this data package.

Field Duplicate Results

A field duplicate pair was not associated with this sample set.

Quantitation Limits and Data Assessment

VOC

Results were reported which were below the lowest calibration standard level (QL) and above the method detection limit (MDL) in the VOC analyses. These results were qualified by the laboratory (J). These results were qualified as estimated (J) due to uncertainty at the low end of calibration.

SVOC

Results were reported which were below the reporting limit (RL) and above the method detection limit (MDL) in the SVOC analyses. These results were qualified as estimated (J) by the laboratory. The results for dibenz(a,h)anthracene in samples SP-CSG13NW and SP-CSG13NE were less than the reporting limit and estimated (J) by the laboratory. However, these compound results were above the lowest associated calibration standard; therefore, the 'J' qualifier was removed by the validator.

Sample SP-CSG13NE (2-fold) was analyzed on dilution due to high target compound levels. The quantitation levels were elevated in these samples.

Sample Quantitation and Compound Identification

VOC and SVOC

Calculations were spot-checked; no discrepancies were noted in the VOC and SVOC analyses.

Samples Reviewed and Evaluation Summary

FIELD ID	LAB ID	FRACTIONS VALIDATED
SP-CSD11-2	220-2694-1	VOC
Associated QC Samples:	Field/Trip Blanks:	None associated
	Field Duplicate pair:	None associated

The above-listed soil samples were collected on September 13, 2007 and were analyzed for volatile organic compounds (VOCs) by SW-846 method 8260B. The data validation was based on the USEPA Region II Standard Operating Procedure (SOP) for the Validation of Organic Data Acquired using SW-846 Method 8260B, SOP No. HW-24, Revision 1, June 1999.

The organic data were evaluated based on the following parameters:

*	•	Data Completeness
*	•	Holding Times and Sample Preservation
*	•	Gas Chromatography/Mass Spectrometry (GC/MS) Tunes
	•	Initial and Continuing Calibrations
	•	Blanks
*	•	Surrogate Recoveries
NA	•	Matrix Spike/Matrix Spike Duplicate (MS/MSD) Results
*	•	Internal Standards
	•	Laboratory Control Sample (LCS) Results
*	•	Moisture Content
NA	•	Field Duplicate Results
	•	Quantitation Limits and Data Assessment
*	•	Sample Quantitation and Compound Identification

* - All criteria were met.

NA – A matrix spike/matrix spike duplicate and field duplicate pair were not associated with this sample set.

All results are usable for project objectives.

Qualifications were not applied to the data as a result of sampling error.
Qualifications applied to the data as a result of analytical error are discussed below.

- Potential uncertainty exists for select VOC results, which were below the lowest calibration standard and quantitation limit. The results were qualified as estimated (J) by the laboratory. These results can be used for project objectives as estimated values, which may have a minor impact on the data usability.

- The VOC positive result for methylene chloride in sample SP-CSD11-2 was qualified as a nondetect (U) at the quantitation limit (QL) due to laboratory blank contamination. The results are still usable for project objectives as nondetects. This qualification may have a minor impact on the data usability.

- The VOC positive results for acetone in sample SP-CSD11-2 was qualified as estimated (J) due to calibration nonconformances. The direction of the bias cannot be determined from these nonconformances. The results can be used for project objectives as estimated values and nondetects with estimated quantitation limits, which may have a minor impact on the data usability.

- The VOC positive and/or nondetect results for acetone, carbon disulfide and 2-hexanone in sample SP-CSD11-2 were qualified as estimated (J/UJ) due to calibration nonconformances. The direction of the bias cannot be determined from these nonconformances. The results can be used for project objectives as estimated values and nondetects with estimated quantitation limits which may have a minor impact on the data usability.

The validation findings were based on the following information.

Data Completeness

The data package was complete as defined under the requirements for the CLP-like deliverables for the VOC analyses.

Holding Times and Sample Preservation

All holding time and sample preservation criteria were met in the VOC analyses.

GC/MS Tunes

All criteria were met in the VOC analyses.

Initial and Continuing Calibrations

Compounds that did not meet criteria in the VOC initial and continuing calibrations are summarized in the following table.

Instrument ID MSN Compound	IC 08/14/07	CC 09/13/07
acetone	X (27.4%)	XX(20.2%)
carbon disulfide		XX(35.8%)
2-butanone	X (15.9%)	
2-hexanone		XX(21.0%)
Samples Affected	SP-CSD11-2	SP-CSD11-2

X = Initial calibration (IC) relative standard deviation (%RSD) > 15; estimate (J) positive results only.
XX = Continuing calibration (CC) percent difference (%D) > 20; estimate (J/UJ) positive and nondetect results.
XXX = Continuing calibration (CC) percent difference (%D) > 90; estimate (J) positive results and reject (R) nondetect results.
+ = Response factor (RRF) < 0.05; Estimate (J) positive results and reject (R) nondetect results.

The VOC positive results for acetone in sample SP-CSD11-2 was qualified as estimated (J) due to calibration nonconformances.

The VOC positive and/or nondetect results for acetone, carbon disulfide and 2-hexanone in sample SP-CSD11-2 were qualified as estimated (J/UJ) due to calibration nonconformances.

Blanks

Methylene chloride was detected in the VOC method blank. The presence of blank contamination indicates that false positives may exist for this compound in the associated samples. Action Levels (ALs) were established at 10x (for common contaminants) and 5x (for other compounds) the concentrations detected. The following table summarizes the AL.

Compound	Type of Blank	Associated Samples	Maximum Concentration	Action Level
methylene chloride	Method	SP-CSD11-2	4.6 ug/kg	46 ug/kg

Sample results were qualified as follows:

- If sample concentration was < the quantitation limit (QL) and ≤ the Action Level, qualify the result as a nondetect (U) at the QL.
- If sample concentration was > the QL and ≤ the Action Level, qualify the result as not detected (U) at the reported concentration.
- If the sample concentration was > the QL and > the Action Level, qualification of the data was not required.

The positive result for methylene chloride in sample SP-CSD11-2 was qualified as a nondetect (U) at the quantitation limit (QL) due to laboratory blank contamination.

Surrogate Recoveries

All criteria were met in the VOC samples.

MS/MSD Results

MS/MSD analyses were not associated with the samples in this data set.

Internal Standards

All criteria were met in the VOC samples.

LCS Results

The following table lists the compounds recovered outside of the LCS analyses and the resulting actions.

Compound	Recovery (%)	Control Limits	Validation Actions
methylene chloride	128	55-126	Validation actions were not required as the results were nondetect and therefore not affected by the potential high bias.

Moisture Content

All criteria were met for the samples in this data package.

Field Duplicate Results

A field duplicate pair was not associated with this sample set.

Quantitation Limits and Data Assessment

Results were reported which were below the lowest calibration standard level (QL) and above the method detection limit (MDL) in the VOC analyses. These results were qualified by the laboratory (J). These results were qualified as estimated (J) due to uncertainty at the low end of calibration.

Samples were analyzed at a 1:1 dilution.

Sample Quantitation and Compound Identification

Calculations were spot-checked; no discrepancies were noted in the VOC and SVOC analyses.

Samples Reviewed and Evaluation Summary

FIELD ID	LAB ID	FRACTIONS VALIDATED
SP-CSF14	220-2743-1	VOC
Associated QC Samples:	Field/Trip Blanks:	None associated
	Field Duplicate pair:	None associated

The above-listed soil samples were collected on September 17, 2007 and were analyzed for volatile organic compounds (VOCs) by SW-846 method 8260B and semivolatile organic compounds (SVOCs) by SW-846 method 8270C. The data validation was based on the USEPA Region II Standard Operating Procedure (SOP) for the Validation of Organic Data Acquired using SW-846 Method 8260B, SOP No. HW-24, Revision 1, June 1999 and the USEPA Region II Standard Operating Procedure (SOP) for the Validation of Organic Data Acquired using SW-846 Method 8270C, SOP No. HW-22, Revision 2, June 2001.

The organic data were evaluated based on the following parameters:

*	•	Data Completeness
*	•	Holding Times and Sample Preservation
*	•	Gas Chromatography/Mass Spectrometry (GC/MS) Tunes
	•	Initial and Continuing Calibrations
	•	Blanks
	•	Surrogate Recoveries
	•	Matrix Spike/Matrix Spike Duplicate (MS/MSD) Results
*	•	Internal Standards
	•	Laboratory Control Sample (LCS) Results
*	•	Moisture Content
NA	•	Field Duplicate Results
	•	Quantitation Limits and Data Assessment
*	•	Sample Quantitation and Compound Identification

* - All criteria were met.

NA – A field duplicate pair was not associated with this sample set.

All results are usable for project objectives.

Qualifications were not applied to the data as a result of sampling error.
Qualifications applied to the data as a result of analytical error are discussed below.

- Potential uncertainty exists for select VOC results, which were below the lowest calibration standard and quantitation limit. The results were qualified as estimated (J) by the laboratory. These results can be used for project objectives as estimated values, which may have a minor impact on the data usability.

- The VOC positive result for methylene chloride in sample SP-CSF14 was qualified as a nondetect (U) at the quantitation limit (QL) due to laboratory blank contamination. The results are still usable for project objectives as nondetects. This qualification may have a minor impact on the data usability.

- The SVOC positive result for diethylphthalate in sample SP-CSF14 was qualified as a nondetect (U) at the quantitation limit (QL) due to laboratory blank contamination. The results are still usable for project objectives as nondetects. This qualification may have a minor impact on the data usability.

- The VOC positive results for acetone in sample SP-CSF14 was qualified as estimated (J) due to calibration nonconformances. The direction of the bias cannot be determined from these nonconformances. The results can be used for project objectives as estimated values and nondetects with estimated quantitation limits, which may have a minor impact on the data usability.

- The VOC positive and nondetect results for chloromethane, vinyl chloride, bromomethane, chloroethane, 1,1-dichloroethene, carbon disulfide, methylene chloride, acetone, trans-1,2-dichloroethene, 1,1-dichloroethane, cis-1,2-dichloroethene, chloroform, carbon tetrachloride, 1,1,1-trichloroethane, 2-butanone, benzene, 1,2-dichloroethane, trichloroethene, 1,2-dichloropropane, dichlorobromomethane, cis-1, 3-dichloropropene, toluene, 4-methyl-2-pentanone, tetrachloroethene, trans-1,3-dichloropropene, 1,1,2-trichloroethane, chlorodibromomethane, 2-hexanone, chlorobenzene, ethylbenzene, m/p-xylene, o-xylene, styrene, bromoform and 1,1,2,2-tetrchloroethane in sample SP-CSF14 were qualified as estimated (J/UJ) due to calibration nonconformances. The direction of the bias cannot be determined from these nonconformances. The results can be used for project objectives as estimated values and nondetects with estimated quantitation limits, which may have a minor impact on the data usability.

- The SVOC positive and/or nondetect results for nitrobenzene, isophorone, hexachlorocyclopentadiene, 2,4-dinitrophenol, benzo(a)anthracene, bis(2-erhylhexyl)phthalate and benzo(k)fluoranthene in sample SP-CSF14 were qualified as estimated (J/UJ) due to calibration nonconformances. The direction of the bias cannot be

determined from these nonconformances. The positive results can be used for project objectives as estimated values and nondetects with estimated quantitation limits, which may have a minor impact on the data usability.

- The positive and/or nondetect VOC results were qualified as estimated (J/UJ) due to MS/MSD recoveries and/or %RPDs which were outside control limits: benzene, bromodichloromethane, bromoform, carbon tetrachloride, chlorobenzene, chloroethane, chloroform, chloromethane, dibromochloromethane, 1,1-dichloroethane, 1,2-dichloroethane, 1,1-dichloroethene, 1,2-dichloropropane, cis-1,3-dichloropropene, trans-1,3-dichloropropene, ethylbenzene, methylene chloride, styrene, 1,1,2,2-tetrachloroethane, tetrachloroethene, toluene, 1,1,1-trichloroethane, 1,1,2-trichloroethane, trichloroethene, vinyl chloride, xylenes(total), cis-1,2-dichloroethene and trans-1,2-dichloroethene. The results may be biased low. The positive results can be used for project objectives as estimated values and nondetects with estimated quantitation limits, which may have a minor impact on the data usability.

The validation findings were based on the following information.

Data Completeness

The data package was complete as defined under the requirements for the CLP-like deliverables for the VOC and SVOC analyses.

Holding Times and Sample Preservation

All holding time and sample preservation criteria were met in the VOC and SVOC analyses.

GC/MS Tunes

All criteria were met in the VOC and SVOC analyses.

Initial and Continuing Calibrations

VOC

Compounds that did not meet criteria in the VOC initial and continuing calibrations are summarized in the following table.

Instrument ID MSN Compound	IC 08/14/07	CC 09/19/07
Chloromethane		XX(58.3%)

Instrument ID MSN Compound	IC 08/14/07	CC 09/19/07
Vinyl chloride		XX(57.0%)
Bromomethane		XX(61.0%)
Chloroethane		XX(54.4%)
1,1-dichloroethene		XX(56.5%)
Carbon disulfide		XX(54.2%)
Methylene chloride		XX(53.8%)
acetone	X(27.4%)	XX(69.1%)
Trans-1,2-dichloroethene		XX(55.2%)
1,1-dichloroethane		XX(55.6%)
Vinyl acetate		XX(47.4%)
Cis-1,2-dichloroethene		XX(57.6%)
Chloroform		XX(56.6%)
Carbon tetrachloride		XX(57.1%)
1,1,1-trichloroethane		XX(58.0%)
2-butanone	X(15.9%)	XX(60.1%)
Benzene		XX(55.4%)
1,2-dichloroethane		XX(56.3%)
trichloroethene		XX(56.1%)
1,2-dichloropropane		XX(54.6%)
dichlorobromomethane		XX(56.6%)
Cis-1,3-dichloropropene		XX(54.6%)
Toluene		XX(64.9%)
4-methyl-2-pentanone		XX(61.8%)
Tetrachloroethene		XX(64.4%)
Trans-1,3-dichloropropene		XX(54.9%)
1,1,2-trichloroethane		XX(56.6%)
Chlorodibromomethane		XX(63.8%)
2-hexanone		XX(61.3%)

Instrument ID MSN Compound	IC 08/14/07	CC 09/19/07
Chlorobenzene		XX(63.5%)
Ethylbenzene		XX(62.9%)
M/p-xylene		XX(63.2%)
o-xylene		XX(63.8%)
Styrene		XX(63.3%)
Bromoform		XX(65.6%)
1,1,2,2-tetrachloroethane		XX(63.3%)
Samples Affected	SP-CSF14	SP-CSF14

X = Initial calibration (IC) relative standard deviation (%RSD) > 15; estimate (J) positive results only.
XX = Continuing calibration (CC) percent difference (%D) > 20; estimate (J/UJ) positive and nondetect results.
XXX = Continuing calibration (CC) percent difference (%D) > 90; estimate (J) positive results and reject (R) nondetect results.
+ = Response factor (RRF) < 0.05; Estimate (J) positive results and reject (R) nondetect results.

The VOC positive results for acetone in sample SP-CSF14 was qualified as estimated (J) due to calibration nonconformances.

The VOC positive and nondetect results for chloromethane, vinyl chloride, bromomethane, chloroethane, 1,1-dichloroethene, carbon disulfide, methylene chloride, acetone, trans-1, 2-dichloroethene, 1,1-dichloroethane, cis-1, 2-dichloroethene, chloroform, carbon tetrachloride, 1,1,1-trichloroethane, 2-butanone, benzene, 1,2-dichloroethane, trichloroethene, 1,2-dichloropropane, dichlorobromomethane, cis-1, 3-dichloropropene, toluene, 4-methyl-2-pentanone, tetrachloroethene, trans-1, 3-dichloropropene, 1,1,2-trichloroethane, chlorodibromomethane, 2-hexanone, chlorobenzene, ethylbenzene, m/p-xylene, o-xylene, styrene, bromoform and 1,1,2,2-tetrchloroethane in sample SP-CSF14 were qualified as estimated (J/UJ) due to calibration nonconformances.

SVOC

Compounds that did not meet criteria in the SVOC initial and continuing calibrations are summarized in the following table.

Instrument ID MSA Compound	IC 7/11/07	CC 9/19/07
Nitrobenzene		XX(24.6%)
Isophorone		XX(25.3%)
Hexachlorocyclopentadiene	X (18.2%)	XX(23.5%)
2,4-dinitrophenol	X (17.1%)	XX(23.7%)
Benzo(a)anthracene		XX(21.1%)
Bis(2-ethylhexyl)phthalate		XX(21.8%)
Benzo(K)fluoranthene		XX(22.6%)
Samples Affected	SP-CSF14	SP-CSF14

X = Initial calibration (IC) relative standard deviation (%RSD) > 15; estimate (J) positive results only.
XX = Continuing calibration (CC) percent difference (%D) > 20; estimate (J/UJ) positive and nondetect results.
XXX = Continuing calibration (CC) percent difference (%D) > 90; estimate (J) positive results and reject (R) nondetect results.
+ = Response factor (RRF) < 0.05; Estimate (J) positive results and reject (R) nondetect results.

The SVOC positive and/or nondetect results for nitrobenzene, isophorone, hexachlorocyclopentadiene, 2,4-dinitrophenol, benzo(a)anthracene, bis(2-erhylhexyl)phthalate and benzo(k)fluoranthene in sample SP-CSF14 were qualified as estimated (J/UJ) due to calibration nonconformances.

Blanks

VOC

Methylene chloride was detected in the VOC method blank. The presence of blank contamination indicates that false positives may exist for this compound in the associated samples. Action Levels (ALs) were established at 10x (for common contaminants) and 5x (for other compounds) the concentrations detected. The following table summarizes the AL.

Compound	Type of Blank	Associated Samples	Maximum Concentration	Action Level
methylene chloride	Method	SP-CSF14	3.9 ug/kg	39 ug/kg

Sample results were qualified as follows:

- If sample concentration was < the quantitation limit (QL) and ≤ the Action Level, qualify the result as a nondetect (U) at the QL.
- If sample concentration was > the QL and ≤ the Action Level, qualify the result as not detected (U) at the reported concentration.
- If the sample concentration was > the QL and > the Action Level, qualification of the data was not required.

The VOC positive results for methylene chloride in sample SP-CSF14 was qualified as nondetect (U) at the quantitation limit (QL) due to laboratory blank contamination.

SVOC

Diethylphthalate was detected in the SVOC method blank. The presence of blank contamination indicates that false positives may exist for this compound in the associated samples. Action Levels (ALs) were established at 10x (for common contaminants) and 5x (for other compounds) the concentrations detected. The following table summarizes the AL.

Compound	Type of Blank	Associated Samples	Maximum Concentration	Action Level
Diethylphthalate	Method	SP-CSF14	560 ug/kg	2800 ug/kg

The SVOC positive result for diethylphthalate in sample SP-CSF14 was qualified as nondetect (U) at the quantitation limit (QL) due to laboratory blank contamination.

Surrogate Recoveries

VOC

All criteria were met in the VOC samples.

SVOC

The following table summarizes the surrogate recoveries that failed to meet the acceptance criteria in the SVOC samples:

Sample ID	2FP 25-113	PHL 27-122	NBZ 25-120	FBP 32-131	TBP 24-150	TPH 35-140
MB 220-9405/1-A	-	-	-	-	-	145

2FP-2-Fluorophenol
PHL- Phenol-d5
NBZ – Nitrobenzene-d5
FBP – 2-Fluorobiphenyl
TBP – 2,4,6-Tribromophenol
TPH – Terphenyl-d14

Qualifications were not required.

MS/MSD Results

SVOC

MS/MSD analyses for the SVOC analyses were not associated with the sample in this data set.

VOC

An MS/MSD was performed on sample SP-CSF14 for the VOC analyses. The following table lists the VOC MS/MSD recoveries and/or %RPDs which were outside of the laboratory established control limits.

Compound	MS/MSD %R	MSB %R	RPD %	QC Limits	Validation Action
benzene	38/42	41	-	66-126	Estimate (J) the positive result for benzene in sample SP-CSF14.
bromodichloromethane	41/39	40	-	64-122	Estimate (UJ) the nondetect result for bromodichloromethane in sample SP-CSF14.
bromoform	31/30	32	-	51-117	Estimate (UJ) the nondetect result for bromoform in sample SP-CSF14.
carbon tetrachloride	39/36	39	-	62-135	Estimate (UJ) the nondetect result for carbon tetrachloride in sample SP-CSF14.
chlorobenzene	32/29	33	-	74-114	Estimate (UJ) the nondetect result for chlorobenzene in sample SP-CSF14.

chloroethane	41/41	43	-	56-159	Estimate (UJ) the nondetect result for chloroethane in sample SP-CSF14.
chloroform	41/40	40	-	68-128	Estimate (UJ) the nondetect result for chloroform in sample SP-CSF14.
chloromethane	37/38	38	-	52-137	Estimate (UJ) the nondetect result for chloromethane in sample SP-CSF14.
dibromochloromethane	32/31	32	-	68-117	Estimate (UJ) the nondetect result for dibromochloromethane in sample SP-CSF14.
1,1-dichloroethane	42/41	41	-	65-134	Estimate (UJ) the nondetect result for 1,1-dichloroethane in sample SP-CSF14.
1,2-dichloroethane	42/41	40	-	62-138	Estimate (UJ) the nondetect result for 1,2-dichloroethane in sample SP-CSF14.
1,1-dichloroethene	41/40	39	-	61-133	Estimate (UJ) the nondetect result for 1,1-dichloroethene in sample SP-CSF14.
1,2-dichloropropane	43/42	41	-	62-126	Estimate (UJ) the nondetect result for 1,2-dichloropropane in sample SP-CSF14.
cis-1,3-dichloropropene	42/38	42	-	44-112	Estimate (UJ) the nondetect result for cis-1,3-dichloropropene in sample SP-CSF14.
trans-1,3-dichloropropene	-/38	40	-	41-133	Estimate (UJ) the nondetect result for trans-1,3-dichloropropene in sample SP-CSF14.
ethylbenzene	-/50	33	43	74-117, <20	Estimate (J) the positive result for ethylbenzene in sample SP-CSF14.
methylene chloride	42/42	43	-	55-126	Estimate (UJ) the nondetect result for methylene chloride in sample SP-CSF14.
styrene	30/25	34	-	72-114	Estimate (UJ) the nondetect result for styrene in sample SP-CSF14.
1,1,2,2-tetrachloroethane	32/30	32	-	59-124	Estimate (UJ) the nondetect result for 1,1,2,2-tetrachloroethane in sample SP-CSF14.
tetrachloroethene	30/26	32	-	66-122	Estimate (UJ) the nondetect result for tetrachloroethene in sample SP-CSF14.
toluene	29/33	32	-	72-113	Estimate (J) the positive

					result for toluene in sample SP-CSF14.
1,1,1-trichloroethane	39/37	39	-	63-130	Estimate (UJ) the nondetect result for 1,1,1-trichloroethane in sample SP-CSF14.
1,1,2-trichloroethane	43/42	40	-	63-123	Estimate (UJ) the nondetect result for 1,1,2-trichloroethane in sample SP-CSF14.
trichloroethene	40/38	40	-	62-117	Estimate (UJ) the nondetect result for trichloroethene in sample SP-CSF14.
vinyl chloride	38/37	41	-	58-145	Estimate (UJ) the nondetect result for vinyl chloride in sample SP-CSF14.
xylenes(total)	-/49	33	38	73-116, <20	Estimate (J) the positive result for Xylenes(total) in sample SP-CSF14.
cis-1,2-dichloroethene	40/40	40	-	63-121	Estimate (UJ) the nondetect result for cis-1,2-dichloroethene in sample SP-CSF14.
trans-1,2-dichloroethene	41/40	40	-	57-127	Estimate (UJ) the nondetect result for trans-1,2-dichloroethene in sample SP-CSF14.

Internal Standards

All criteria were met in the VOC and SVOC samples.

LCS Results

VOC:

All criteria were met in the VOC samples.

SVOC:

The following table lists the compounds recovered outside of the LCS analyses and the resulting actions.

Compound	Recovery (%)	Control Limits	Validation Actions
2,4-dinitrophenol	54	0-36	Validation actions were not required as the results were nondetect and therefore not affected by the potential high bias.

Moisture Content

All criteria were met for the sample in this data package.

Field Duplicate Results

A field duplicate pair was not associated with this sample set.

Quantitation Limits and Data Assessment

VOC

Results were reported which were below the lowest calibration standard level (QL) and above the method detection limit (MDL) in the VOC analyses. These results were qualified by the laboratory (J). These results were qualified as estimated (J) due to uncertainty at the low end of calibration.

Samples were analyzed at a 1:1 dilution.

SVOC

Results were reported which were below the reporting limit (RL) and above the method detection limit (MDL) in the SVOC analyses. These results were qualified as estimated (J) by the laboratory. These results were qualified as estimated (J) due to uncertainty at the low end of calibration.

Samples were analyzed at a 1:1 dilution.

Sample Quantitation and Compound Identification

Calculations were spot-checked; no discrepancies were noted in the VOC and SVOC analyses.

Project: Starlight Park

Date: October 10, 2007

Samples Reviewed and Evaluation Summary

FIELD ID	LAB ID	FRACTIONS VALIDATED
SP-CSC12W	Y3846-01	VOC, SVOC
SP-CSC12E2	Y3846-02	VOC, SVOC
Associated QC Samples:	Field/Trip Blanks:	None associated
	Field Duplicate pair:	None associated

The above-listed soil samples were collected on August 2, 2007 and were analyzed for volatile organic compounds (VOCs) by SW-846 method 8260B and semivolatile organic compounds (SVOCs) by SW-846 method 8270C. The data validation was based on the USEPA Region II Standard Operating Procedure (SOP) for the Validation of Organic Data Acquired using SW-846 Method 8260B, SOP No. HW-24, Revision 1, June 1999 and the USEPA Region II Standard Operating Procedure (SOP) for the Validation of Organic Data Acquired using SW-846 Method 8270C, SOP No. HW-22, Revision 2, June 2001.

The organic data were evaluated based on the following parameters:

*	•	Data Completeness
*	•	Holding Times and Sample Preservation
*	•	Gas Chromatography/Mass Spectrometry (GC/MS) Tunes
	•	Initial and Continuing Calibrations
	•	Blanks
*	•	Surrogate Recoveries
	•	Matrix Spike/Matrix Spike Duplicate (MS/MSD) Results
*	•	Internal Standards
	•	Laboratory Control Sample (LCS) Results
*	•	Moisture Content
NA	•	Field Duplicate Results
	•	Quantitation Limits and Data Assessment
*	•	Sample Quantitation and Compound Identification

* - All criteria were met.

NA -- A field duplicate pair was not associated with this sample set.

All results are usable for project objectives.

Qualifications were not applied to the data as a result of sampling error. Qualifications applied to the data as a result of analytical error are discussed below.

- Potential uncertainty exists for select VOC and SVOC results which were below the lowest calibration standard and quantitation limit. The results were qualified as estimated (J) by the laboratory. These results can be used for project objectives as estimated values which may have a minor impact on the data usability.

- The positive results for methylene chloride in samples SP-CSC12W and SP-CSC12E2 were qualified as nondetects (U) at the reported levels due to laboratory blank contamination. The results are still usable for project objectives as nondetects with elevated quantitation limits. This qualification may have a minor impact on the data usability.

- The positive results for carbon disulfide in samples SP-CSC12W and SP-CSC12E2 were qualified as estimated (J) due to initial calibration nonconformances. The direction of the bias cannot be determined from these nonconformances. The results can be used for project objectives as estimated values which may have a minor impact on the data usability.

- The nondetect results for bromomethane, chloroethane, trichlorofluoromethane, 1,1,2-trichlorotrifluoroethane, and cyclohexane in samples SP-CSC12W and SP-CSC12E2 were qualified as estimated (UJ) due to continuing calibration nonconformances. The direction of the bias cannot be determined from these nonconformances. The results can be used for project objectives as nondetects with estimated quantitation limits which may have a minor impact on the data usability.

- The nondetect results for chloroethane in samples SP-CSC12W and SP-CSC12E2 were qualified as estimated (UJ) due to low recovery in the LCS. The results may be biased low. The results can be used for project objectives as nondetects with estimated quantitation limits which may have a minor impact on the data usability.

- The blank-qualified nondetect results for methylene chloride in samples SP-CSC12W and SP-CSC12E2 were qualified as estimated (UJ) due to high recovery in the LCS. The results may be biased high. The results can be used for project objectives as nondetects with estimated quantitation limits which may have a minor impact on the data usability.

The validation findings were based on the following information.

Data Completeness

The data package was complete as defined under the requirements for the NY ASP category B deliverables for the VOC and SVOC analyses.

Holding Times and Sample Preservation

All holding time and sample preservation criteria were met in the VOC and SVOC analyses.

GC/MS Tunes

All criteria were met in the VOC and SVOC analyses.

Initial and Continuing Calibrations

VOC

Compounds that did not meet criteria in the VOC initial and continuing calibrations are summarized in the following tables.

Instrument ID MSVOAK Compound	**IC 07/04/07**	**CC 08/03/07 12:25**
Bromomethane	X (19.5%)	XX (24.0%)
Chloroethane	X (55.7%)	XX (62.0%)
Trichlorofluoromethane	X (38.8%)	XX (26.5%)
1,1,2-Trichlorotrifluoroethane	X (18.5%)	XX (26.2%)
1,1-Dichloroethene	X (20.2%)	
Carbon disulfide	X (16.9%)	
Cyclohexane		XX (21.6%)
Samples Affected	All samples	All samples

Instrument ID MSVOAH Compound	**IC 08/03/07**	**CC 08/09/07 11:53**
Dichlorodifluoromethane	X (28.2%)	XX (28.3%)
Chloromethane	X (19.1%)	

Instrument ID MSVOAH Compound	IC 08/03/07	CC 08/09/07 11:53
Bromomethane		XX (38.7%)
Chloroethane		XX (26.7%)
1,1,2-Trichlorotrifluoroethane		XX (21.5%)
Carbon disulfide		XX (22.9%)
Cyclohexane		XX (22.8%)
Samples Affected	Medium Level SP-CSC12W	Medium Level SP-CSC12W

X = Initial calibration (IC) relative standard deviation (%RSD) > 15; estimate (J) positive results only.
XX = Continuing calibration (CC) percent difference (%D) > 20; estimate (J/UJ) positive and nondetect results.
XXX = Continuing calibration (CC) percent difference (%D) > 90; estimate (J) positive results and reject (R) nondetect results.
+ = Response factor (RRF) < 0.05; Estimate (J) positive results and reject (R) nondetect results.

The positive results for carbon disulfide in samples SP-CSC12W and SP-CSC12E2 were estimated due to initial calibration nonconformances. Validation actions were not required for bromomethane, chloroethane, trichlorofluoromethane, 1,1,2-trichlorotrifluoroethane, and 1,1-dichloroethene due to initial calibration nonconformances as positive results are affected and these results were not detected.

The nondetect results for bromomethane, chloroethane, trichlorofluoromethane, 1,1,2-trichlorotrifluoroethane, and cyclohexane in all samples were estimated (UJ) due to continuing calibration nonconformances.

Validation actions were not required for all affected compounds in the medium level analysis of sample SP-CSC12W as benzene only was reported from this analysis.

SVOC

The %RSDs for benzaldehyde, 2,4-dinitrophenol, 4-nitrophenol, 4,6-dinitro-2-methylphenol, and pentachlorophenol exceeded the control limit of 15. However, the laboratory performed quadratic regressions for these compounds and correlation coefficients were acceptable.

Blanks

SVOC

Target compounds were not detected in the SVOC method blank sample.

The results for tentatively identified compound (TIC) ACP at retention time (RT) 3.25 were rejected (R) in all samples.

VOC

Methylene chloride was detected in the VOC method blank. The presence of blank contamination indicates that false positives may exist for this compound in the associated samples. Action Levels (ALs) were established at 10x (for common contaminants) and 5x (for other compounds) the concentrations detected. The following table summarizes the AL.

Compound	Type of Blank	Associated Samples	Maximum Concentration	Action Level
Methylene chloride	Method	All samples	16 ug/kg	160 ug/kg

Sample results were qualified as follows:

- If sample concentration was < the quantitation limit (QL) and ≤ the Action Level, qualify the result as a nondetect (U) at the QL.
- If sample concentration was > the QL and ≤ the Action Level, qualify the result as not detected (U) at the reported concentration.
- If the sample concentration was > the QL and > the Action Level, qualification of the data was not required.

The positive results for methylene chloride in samples SP-CSC12W and SP-CSC12E2 were qualified as nondetect (U) at the reported levels due to laboratory blank contamination.

Surrogate Recoveries

All criteria were met in the VOC and SVOC samples.

MS/MSD Results

VOC

The recoveries for chloroethane (37, 36), trichlorofluoromethane (64, 68), 1,1-dichloroethene (76, 80), and 1,1-dichloroethane (MS 76) were outside of control limits in the MS/MSD performed on a non-project sample (Y3776-07). Validation action was not required on this basis.

The recoveries for trichlorofluoromethane (64, 62), 1,1,2-trichlorotrifluoroethane (75, 73), methyl acetate (MS 152), carbon tetrachloride (77, 73), and 1,1-dichloroethene (MSD 79) were outside of control limits in the MS/MSD performed on a non-project sample (Y3914-01). Validation action was not required on this basis.

SVOC

The recovery for 2,4-dintrophenol (MSD 14) and relative percent difference (RPD) for 2,4-dinitrophenol (73) were outside of control limits in the MS/MSD performed on a non-project sample (Y3845-01). Validation action was not required on this basis.

Internal Standards

All criteria were met in the VOC and SVOC analyses.

LCS Results

SVOC

All criteria were met.

VOC

The following table lists the compounds recovered outside of the LCS analysis and the resulting actions.

Compound	Recovery (%)	Control Limits	Associated Samples	Validation Actions
Chloroethane	55	70-130	All samples	Estimate (UJ) the nondetect results for chloroethane in all samples.
Methylene chloride	175	70-130	All samples	Estimate (UJ) the blank-qualified results for methylene chloride in all samples.
Acetone	140	70-130	Medium level SP-CSC12W	Validation actions were not required on this basis as the result for benzene only was reported from the medium level analysis of this sample.
Methyl acetate	135			
1,1.2,2-tetrachloroethane	135			
1,2-dibromo-3-chloropropane	140			

Moisture Content

All criteria were met.

Field Duplicate Results

A field duplicate pair was not associated with this sample set.

Quantitation Limits and Data Assessment

VOC

Results were reported which were below the reporting limit (RL) and above the method detection limit (MDL) in the SVOC analyses. These results were qualified as estimated (J) by the laboratory.

The VOC analysis used one gram of sample instead of typical amount of five. Quantitation limits are therefore elevated by a factor of five.

The result for benzene was over the calibration limit in the initial analysis of sample SP-CSC12W. A medium level analysis was performed for sample SP-CSC12W and the result for benzene was reported from this analysis.

SVOC

Results were reported which were below the reporting limit (RL) and above the method detection limit (MDL) in the SVOC analyses. These results were qualified as estimated (J) by the laboratory.

Sample Quantitation and Compound Identification

Calculations were spot-checked; no discrepancies were noted in the VOC and SVOC analyses.

Samples Reviewed and Evaluation Summary

FIELD ID	LAB ID	FRACTIONS VALIDATED
SP-CSH11	Y3537-01	VOC, SVOC
SP-CSC11W	Y3537-02	VOC, SVOC
SP-CSC10W	Y3537-03	VOC, SVOC
SP-CSC9N	Y3537-04	VOC, SVOC

Associated QC Samples:	Field/Trip Blanks:	None associated
	Field Duplicate pair:	None associated

The above-listed soil samples were collected on July 16, 2007 and were analyzed for volatile organic compounds (VOCs) by SW-846 method 8260B and semivolatile organic compounds (SVOCs) by SW-846 method 8270C. The data validation was based on the USEPA Region II Standard Operating Procedure (SOP) for the Validation of Organic Data Acquired using SW-846 Method 8260B, SOP No. HW-24, Revision 1, June 1999 and the USEPA Region II Standard Operating Procedure (SOP) for the Validation of Organic Data Acquired using SW-846 Method 8270C, SOP No. HW-22, Revision 2, June 2001.

The organic data were evaluated based on the following parameters:

*	•	Data Completeness
*	•	Holding Times and Sample Preservation
*	•	Gas Chromatography/Mass Spectrometry (GC/MS) Tunes
	•	Initial and Continuing Calibrations
	•	Blanks
	•	Surrogate Recoveries
	•	Matrix Spike/Matrix Spike Duplicate (MS/MSD) Results
	•	Internal Standards
	•	Laboratory Control Sample (LCS) Results
*	•	Moisture Content
NA	•	Field Duplicate Results
	•	Quantitation Limits and Data Assessment
	•	Sample Quantitation and Compound Identification

* - All criteria were met.

NA -- A field duplicate pair was not associated with this sample set.

All results are usable for project objectives.

Qualifications were not applied to the data as a result of sampling error. Qualifications applied to the data as a result of analytical error are discussed below.

- Potential uncertainty exists for select VOC and SVOC results which were below the lowest calibration standard and quantitation limit. The results were qualified as estimated (J) by the laboratory. These results can be used for project objectives as estimated values which may have a minor impact on the data usability.

- The positive results for methylene chloride in samples SP-CSH11, SP-CSC11W, SP-CSC10W, and SP-CSC9N were qualified as nondetects (U) at the reported levels due to laboratory blank contamination. The results are still usable for project objectives as nondetects with elevated quantitation limits. This qualification may have a minor impact on the data usability.

- The positive results for carbon disulfide in samples SP-CSC11W and SP-CSC10W were qualified as estimated (J) due to initial calibration nonconformances. The direction of the bias cannot be determined from this nonconformance. The results can be used for project objectives as estimated values which may have a minor impact on the data usability.

- The nondetect results for bromomethane, chloroethane, trichlorofluoromethane, and methylene chloride in all samples were qualified as estimated (UJ) due to continuing calibration nonconformances. The direction of the bias cannot be determined from these nonconformances. The results can be used for project objectives as nondetects with estimated quantitation limits which may have a minor impact on the data usability.

- The positive results for ethylbenzene, m&p xylenes, and o-xylene in sample SP-CSC10W and naphthalene in sample SP-CSC11W were qualified as estimated (J) due to high surrogate recoveries. The results may be biased high. The results can be used for project objectives as estimated values which may have a minor impact on the data usability.

- The positive and nondetect results for chlorobenzene, ethylbenzene, and xylenes in sample SP-CSC10W and acetophenone, nitrobenzene, isophorone, 2-nitrophenol, bis(2-chloroethoxy)methane, 2,4-dichlorophenol, 4-chloroaniline, hexachlorobutadiene, caprolactam, and 4-chloro-3-methylphenol in sample SP-CSC11W were qualified as estimated (J/UJ) due to low internal standard recoveries. The results can be used for project objectives as estimated values and nondetects with estimated quantitation limits which may have a minor impact on the data usability.

- The nondetect results for 2,4-dinitrophenol and 4,6-dinitro-2-methylphenol in sample SP-CSC9N were qualified as estimated (UJ) due to low recoveries in the MS and MSD. The results may be biased low. The results can be used for project objectives as nondetects with estimated quantitation limits which may have a minor impact on the data usability.

- The blank-qualified nondetect results for methylene chloride in all samples were qualified as estimated (UJ) due to high recovery in the LCS. The results may be biased high. The results can be used for project objectives as nondetects with estimated quantitation limits which may have a minor impact on the data usability.

- The positive results for benzene and toluene in sample SP-CSC10W were qualified as estimated (J) as the results were over-calibrated. The results may be biased low. The results can be used for project objectives as estimated values which may have a minor impact on the data usability.

The validation findings were based on the following information.

Data Completeness

The data package was complete as defined under the requirements for the NYSDEC ASP category B deliverables for the VOC and SVOC analyses.

Holding Times and Sample Preservation

All holding time and sample preservation criteria were met in the VOC and SVOC analyses.

GC/MS Tunes

All criteria were met in the VOC and SVOC analyses.

Initial and Continuing Calibrations

VOC

Compounds that did not meet criteria in the VOC initial and continuing calibrations are summarized in the following tables.

Instrument ID MSVOAK Compound	IC 07/04/07	CC 07/17/07 10:58
Bromomethane	X (19.5%)	XX (24.2%)

Instrument ID MSVOAK Compound	IC 07/04/07	CC 07/17/07 10:58
Chloroethane	X (55.7%)	XX (57.3%)
Trichlorofluoromethane	X (38.8%)	XX (36.5%)
1,1,2-Trichlorotrifluoroethane	X (18.5%)	
1,1-Dichloroethene	X (20.2%)	
Carbon disulfide	X (16.9%)	
Methylene chloride		XX (27.7%)
Samples Affected	All samples	All samples

Instrument ID MSVOAH Compound	IC 07/19/07
Dichlorodifluoromethane	X (15.1%)
Chloromethane	X (16.2%)
Bromomethane	X (24.2%)
Trichlorofluoromethane	X (19.7%)
Samples Affected	Medium Level SP-CSC11W, SP-CSC10W

X = Initial calibration (IC) relative standard deviation (%RSD) > 15; estimate (J) positive results only.
XX = Continuing calibration (CC) percent difference (%D) > 20; estimate (J/UJ) positive and nondetect results.
XXX = Continuing calibration (CC) percent difference (%D) > 90; estimate (J) positive results and reject (R) nondetect results.
+ = Response factor (RRF) < 0.05; Estimate (J) positive results and reject (R) nondetect results.

The positive results for carbon disulfide in samples SP-CSC11W and SP-CSC10W were estimated (J) due to initial calibration nonconformances. Validation actions were not required for bromomethane, chloroethane, trichlorofluoromethane, 1,1,2-trichlorotrifluoroethane, and 1,1-dichloroethene due to initial calibration nonconformances as positive results are affected and these results were not detected.

The nondetect results for bromomethane, chloroethane, trichlorofluoromethane, and methylene chloride in all samples were estimated (UJ) due to continuing calibration nonconformances.

Validation actions were not required for all affected compounds in the medium level analysis of sample SP-CSC11W and SP-CSC10W as the affected compounds were not reported from the medium level analysis.

SVOC

Compounds that did not meet criteria in the SVOC initial calibration are summarized in the following table.

Instrument ID BNAE Compound	IC 07/18/07
2,4-dinitrophenol	X (22.8%)
Samples Affected	SP-CSC11WDL, DL2, DL3, DL4 SP-CSC10WDL, SP-CSC9NDL

X = Initial calibration (IC) relative standard deviation (%RSD) > 15; estimate (J) positive results only.
XX = Continuing calibration (CC) percent difference (%D) > 20; estimate (J/UJ) positive and nondetect results.
XXX = Continuing calibration (CC) percent difference (%D) > 90; estimate (J) positive results and reject (R) nondetect results.
+ = Response factor (RRF) < 0.05; Estimate (J) positive results and reject (R) nondetect results.

Validation actions were not required for 2,4-dinitrophenol due to initial calibration nonconformances as positive results are affected and these results were not detected or reported from the diluted analyses.

Blanks

SVOC

Target compounds were not detected in the SVOC method blank sample.

The results for tentatively identified compound (TIC) ACP at retention time (RT) 3.47 were rejected (R) in all samples.

VOC

Methylene chloride was detected in the VOC method blank. The presence of blank contamination indicates that false positives may exist for this compound in the associated samples. Action Levels (ALs) were established at 10x (for common contaminants) and 5x (for other compounds) the concentrations detected. The following table summarizes the AL.

Compound	Type of Blank	Associated Samples	Maximum Concentration	Action Level
Methylene chloride	Method	All samples	20 ug/kg	200 ug/kg

Sample results were qualified as follows:

- If sample concentration was < the quantitation limit (QL) and ≤ the Action Level, qualify the result as a nondetect (U) at the QL.
- If sample concentration was > the QL and ≤ the Action Level, qualify the result as not detected (U) at the reported concentration.
- If the sample concentration was > the QL and > the Action Level, qualification of the data was not required.

The positive results for methylene chloride in samples SP-CSH11, SP-CSC11W, SP-CSC10W, and SP-CSC9N were qualified as nondetect (U) at the reported levels due to laboratory blank contamination.

Surrogate Recoveries

VOC

The following table lists the surrogates recovered outside of control limits of 75-125 and the resulting actions.

Sample	DBFM	1,2-DCE	Tol	4-BFB	Validation actions
SP-CSC10W Medium Level	156%	442%	136%	235%	Estimate (J) the positive results for ethylbenzene, m&p xylenes, and o-xylene in sample SP-CSC10W.

SVOC

The following table lists the surrogates recovered outside of control limits and the resulting actions.

Sample	PHL 24-113	2-FP 25-121	246-TBP 19-122	NBZ 23-120	2-FBP 30-116	TER 18-137	Validation actions
SP-CSC11W	-	-	-	125%	-	-	Validation action was not required as only one surrogate was outside of control limits.
SP-CSC11WDL3	-	-	3%	-	-	-	Validation action was not required as only one surrogate was outside of control limits.

Sample	PHL 24-113	2-FP 25-121	246-TBP 19-122	NBZ 23-120	2-FBP 30-116	TER 18-137	Validation actions
SP-CSC11WDL4	-	-	17%	-	125%	300%	Estimate (J) the positive result for naphthalene as this was the only reported result from this dilution.

- Criteria met

MS/MSD Results

VOC

The recoveries for chloroethane (44,44), trichlorofluoromethane (76, 48), methyl acetate (MSD 152), and tetrachloroethane (MSD 148) and relative percent differences (RPDs) for trichlorofluoromethane (45), 2-butanone (21), 4-methyl-2-pentanone (21), and 2-hexanone (21) were outside of control limits in the low level MS/MSD performed on a non-project sample (Y3521-01). Validation action was not required on this basis.

The laboratory reported results for medium level MS/MSDs performed on a non-project sample (Y3353-01). All criteria were met.

SVOC

MS/MSDs were performed on sample SP-CSC9N. The recoveries for 2,4-dinitrophenol (17, 20) and 4,6-dinitro-2-methylphenol (18, 23) were recovered below the control limits in the MS/MSD. The nondetect results for 2,4-dinitrophenol and 4,6-dinitro-2-methylphenol were estimated (UJ) in sample SP-CSC9N.

Internal Standards

VOC

The following table lists the internal standards recovered outside of control limits in the VOC analyses and the resulting validation actions.

Sample	Internal Standard	Recovery (%)	Validation Actions
Medium Level CSC10W	Pentafluorobenzene	14.0	Validation actions were not required as the affected compound results were not reported from this dilution analysis.

Sample	Internal Standard	Recovery (%)	Validation Actions
Medium Level CSC10W	1,4-difluorobenzene	25.2	Validation action was not taken; due to the low IS area, professional judgement was taken to report the affected results, benzene and toluene which were slightly above the calibration range , from the level analysis.
Medium Level CSC10W	Chlorobenzene	47.7	Estimate (J) the positive results for chlorobenzene, ethylbenzene, and xylenes.

SVOC

The following table lists the internal standards recovered outside of control limits in the SVOC analyses and the resulting validation actions.

Sample	Internal Standard	Recovery (%)	Validation Actions
SP-CSC11W	Naphthalene-d8	43.7	Estimate (UJ) the associated nondetect results which were reported from the undiluted analysis of SP-CSC11W: acetophenone, nitrobenzene, isophorone, 2-nitrophenol, bis(2-chloroethoxy)methane, 2,4-dichlorophenol, 4-chloroaniline, hexachlorobutadiene, caprolactam, and 4-chloro-3-methylphenol.

LCS Results

The following table lists the compounds recovered outside of control limits in the LCS VOC and SVOC analyses and the resulting actions.

Compound	**Recovery (%)**	**Control Limits**	**Associated Samples**	**Validation Actions**
Trichlorofluoromethane	135	70-130	All low level samples	Validation actions were not required as the results for trichlorofluoromethane were nondetect and therefore not affected by the potential high bias.
Methylene chloride	210	70-130	All low level samples	Estimate (UJ) the blank-qualified results for methylene chloride in all samples.

Compound	Recovery (%)	Control Limits	Associated Samples	Validation Actions
Dichlorodifluoromethane	60	70-130	QC samples only	Validation actions were not required on this basis.
Chloromethane	65			
Vinyl chloride	65			
Trichlorofluoromethane	65			
1,1,2-trichlorotrifluoroethane	55			
Carbon disulfide	60			
Cyclohexane	60			
Methylcyclohexane	60			
Cis-1,3-dichloropropene	65			
Dibromochloromethane	65			

Moisture Content

All criteria were met.

Field Duplicate Results

A field duplicate pair was not associated with this sample set.

Quantitation Limits and Data Assessment

The following table lists the sample dilutions and analyses which were performed and reported.

Sample	VOC Analysis Reported	SVOC Analysis Reported
SP-CSC11W	Report results for benzene, toluene, ethylbenzene, m/p-xylenes, and o-xylene from the medium level analysis. Report remaining compounds from low level analysis.	Report result for naphthalene from the 2500-fold dilution analysis. Report results for 2-methylnaphthalene and phenanthrene from the 250-fold dilution analysis. Report results for acenaphthylene, fluorene, anthracene, fluoranthene, pyrene, benzo(a)anthracene, chrysene, benzo(b)fluoranthene, and benzo(a)pyrene from the 25-fold dilution analysis. Report results for 3&4 methylphenol, 2,4-dimethylphenol, 1,1'-biphenyl, acenaphthene, dibenzofuran, carbazole, benzo(k)fluoranthene, indeno(123-cd)pyrene, and benzo(ghi)perylene from the 5-fold dilution analysis. Report remaining compounds from undiluted analysis.

Sample	VOC Analysis Reported	SVOC Analysis Reported
SP-CSC10W	Report results for ethylbenzene, m/p-xylenes, and o-xylene from the medium level analysis. Report remaining compounds from low level analysis. Estimate (J) the over-calibrated results for benzene and toluene in the low level analysis as the associated internal standard was poor in the medium level analysis.	Report results for naphthalene, phenanthrene, anthracene, fluoranthene, and pyrene from the 5-fold dilution. Report remaining compounds from undiluted analysis.
SP-CSC9N	NR	Report results for naphthalene, phenanthrene, fluoranthene, and pyrene from the 5-fold dilution. Report remaining compounds from undiluted analysis.

NR- A dilution was not required

VOC

Results were reported which were below the reporting limit (RL) and above the method detection limit (MDL) in the SVOC analyses. These results were qualified as estimated (J) by the laboratory.

The VOC analysis used one gram of sample instead of the typical amount of five. Quantitation limits are therefore elevated by a factor of five.

SVOC

Results were reported which were below the reporting limit (RL) and above the method detection limit (MDL) in the SVOC analyses. These results were qualified as estimated (J) by the laboratory.

Sample Quantitation and Compound Identification

Calculations were spot-checked; no discrepancies were noted in the VOC and SVOC analyses.

Styrene, was reported as a tentatively identified compound (TIC) in SVOC sample SP-CSC11W. As the result was reported as a target compound in the VOC sample, the TIC result was rejected (R).

Project: Starlight Park
Laboratory: Test America, Shelton, CT

Date: October 10, 2007

Samples Reviewed and Evaluation Summary

FIELD ID	LAB ID	FRACTIONS VALIDATED
SP-CSE15NW	220-2824-1	VOC, SVOC
SP-CSE14	220-2824-2	VOC, SVOC
SP-CSE15	220-2824-3	VOC, SVOC
SP-CSG14	220-2824-4	VOC, SVOC
SP-CS13NW-2	220-2824-5	VOC, SVOC
Associated QC Samples:	Field/Trip Blanks:	None associated
	Field Duplicate pair:	None associated

The above-listed soil samples were collected on September 24, 2007 and were analyzed for volatile organic compounds (VOCs) by SW-846 method 8260B and semivolatile organic compounds (SVOCs) by SW-846 method 8270C. The data validation was based on the USEPA Region II Standard Operating Procedure (SOP) for the Validation of Organic Data Acquired using SW-846 Method 8260B, SOP No. HW-24, Revision 1, June 1999 and the USEPA Region II Standard Operating Procedure (SOP) for the Validation of Organic Data Acquired using SW-846 Method 8270C, SOP No. HW-22, Revision 2, June 2001.

The organic data were evaluated based on the following parameters:

*	•	Data Completeness
	•	Holding Times and Sample Preservation
*	•	Gas Chromatography/Mass Spectrometry (GC/MS) Tunes
	•	Initial and Continuing Calibrations
	•	Blanks
*	•	Surrogate Recoveries
	•	Matrix Spike/Matrix Spike Duplicate (MS/MSD) Results
*	•	Internal Standards
	•	Laboratory Control Sample (LCS) Results
	•	Moisture Content
NA	•	Field Duplicate Results
	•	Quantitation Limits and Data Assessment
*	•	Sample Quantitation and Compound Identification

* - All criteria were met.

NA – A field duplicate pair was not associated with this sample set.

All results are usable for project objectives.

Qualifications applied to the data as a result of sampling error are discussed below.

- The positive and nondetect results for sample SP-CSE14 were qualified as estimated (J/UJ) due to high moisture content. The results are usable for project objectives as estimated values and nondetects with estimated quantitation limits. This qualification may have a minor impact on the data usability.

Qualifications applied to the data as a result of analytical error are discussed below.

- Potential uncertainty exists for select VOC and SVOC results which were below the lowest calibration standard and quantitation limit. The results were qualified as estimated (J) by the laboratory. These results can be used for project objectives as estimated values which may have a minor impact on the data usability.

- The positive results for methylene chloride in all samples were qualified as nondetects (U) at the quantitation limit (QL) due to laboratory blank contamination. The results are still usable for project objectives as nondetects. This qualification may have a minor impact on the data usability.

- The positive results for acetone in all samples and the results for methyl ethyl ketone in samples SP-CSE14 and SP-CSE15 were qualified as estimated (J) due to initial calibration nonconformances. The direction of the bias cannot be determined from these nonconformances. The results can be used for project objectives as estimated values which may have a minor impact on the data usability.

- The nondetect results for styrene in all samples were qualified as estimated (UJ) due to low recovery in the LCS analysis. The results may be biased low. The results can be used for project objectives as nondetects with estimated quantitation limits which may have a minor impact on the data usability.

The validation findings were based on the following information.

Data Completeness

The data package was complete as defined under the requirements for the NY ASP category B deliverables for the VOC and SVOC analyses.

Holding Times and Sample Preservation

All holding time and sample preservation criteria were met in the VOC and SVOC analyses.

The cooler temperature was recorded at 14.6 degrees Celsius upon receipt at the laboratory. The sampler was contacted concerning the condition of the sample storage. The samples were collected on 09/24/07 and shipped within one hour of sampling. The temperature blank and samples, which were at ambient temperature, were placed in the cooler immediately before transit to the laboratory. As the delivery time was approximately two hours, it is believed that the samples and cooler temperature blank were not able to reach the acceptable storage temperature of six degrees Celsius before arrival at the laboratory. As the samples arrived at the laboratory with ice present in the cooler, validation actions were not taken on the basis of the high recorded cooler temperature.

GC/MS Tunes

All criteria were met in the VOC and SVOC analyses.

Initial and Continuing Calibrations

VOC

Compounds that did not meet criteria in the VOC initial calibration are summarized in the following table.

Instrument ID MSN Compound	IC 08/14/07
Methyl ethyl ketone	X (15.9%)
Acetone	X (27.4%)
Carbon disulfide	
Samples Affected	All samples

X = Initial calibration (IC) relative standard deviation (%RSD) > 15; estimate (J) positive results only.
XX = Continuing calibration (CC) percent difference (%D) > 20; estimate (J/UJ) positive and nondetect results.
XXX = Continuing calibration (CC) percent difference (%D) > 90; estimate (J) positive results and reject (R) nondetect results.
+ = Response factor (RRF) < 0.05; Estimate (J) positive results and reject (R) nondetect results.

The positive results for acetone in all samples and the results for methyl ethyl ketone in samples SP-CSE14 and SP-CSE15 were estimated (J) due to initial calibration nonconformances.

Validation actions were not required for methyl ethyl ketone in the remaining samples due to initial calibration nonconformances as positive results only are affected and these results were not detected.

SVOC

All criteria were met.

Blanks

VOCs

Methylene chloride was detected in the VOC method blank. The presence of blank contamination indicates that false positives may exist for this compound in the associated samples. Action Levels (ALs) were established at 10x (for common contaminants) and 5x (for other compounds) the concentrations detected. The following table summarizes the AL.

Compound	Type of Blank	Associated Samples	Maximum Concentration	Action Level
Methylene chloride	Method	All samples	5.1 ug/kg	51 ug/kg

Sample results were qualified as follows:

- If sample concentration was < the quantitation limit (QL) and ≤ the Action Level, qualify the result as a nondetect (U) at the QL.
- If sample concentration was > the QL and ≤ the Action Level, qualify the result as not detected (U) at the reported concentration.
- If the sample concentration was > the QL and > the Action Level, qualification of the data was not required.

The positive results for methylene chloride in all samples were qualified as nondetect (U) at the quantitation limit due to laboratory blank contamination.

SVOC

Target compounds were not detected in the SVOC method blank sample.

Surrogate Recoveries

All criteria were met in the VOC and SVOC samples.

MS/MSD Results

MS/MSDs were not associated with the samples in this data set for the VOC and SVOC analyses.

Internal Standards

All criteria were met in the VOC and SVOC analyses.

LCS Results

VOC and SVOC

The following table lists the compounds recovered outside of the LCS analyses and the resulting actions.

Compound	Recovery (%)	Control Limits	Validation Actions
Styrene	70	72-114	Estimate (UJ) the nondetect results for styrene in all samples.
2,4-dinitrophenol	77	0-36	Validation actions were not required as the results were nondetect and therefore not affected by the potential high bias.

Moisture Content

Sample SP-CSE14 (45.7) had percent solids less than 50. The positive and nondetect results for sample SP-CSE14 were qualified as estimated (J/UJ).

Field Duplicate Results

A field duplicate pair was not associated with this sample set.

Quantitation Limits and Data Assessment

VOC

Results were reported which were below the lowest calibration standard level (QL) and above the method detection limit (MDL) in the VOC analyses. These results were qualified by the laboratory (J). These results were qualified as estimated (J) due to uncertainty at the low end of calibration.

Sample SP-CSE14 (5-fold) was analyzed on dilution due to high target compound levels. The quantitation levels were elevated in this sample.

SVOC

Results were reported which were below the reporting limit (RL) and above the method detection limit (MDL) in the SVOC analyses. These results were qualified as estimated (J) by the laboratory. The results for phenanthrene in sample SP-CSE15NW, benzo(k)fluoranthene in sample SP-CSE15, and acenaphthene in sample SP-CS13NW-2 were less than the reporting limit and estimated (J) by the laboratory. However, these compound results were above the lowest associated calibration standard; therefore, the 'J' qualifier was removed by the validator.

Sample Quantitation and Compound Identification

Calculations were spot-checked; no discrepancies were noted in the VOC and SVOC analyses.

SP-CSD11	220-2653-7	VOC, SVOC

Associated QC Samples: Field/Trip Blanks: None associated
Field Duplicate pair: None associated

The above-listed soil samples were collected on September 10, 2007 and were analyzed for volatile organic compounds (VOCs) by SW-846 method 8260B and semivolatile organic compounds (SVOCs) by SW-846 method 8270C. The data validation was based on the USEPA Region II Standard Operating Procedure (SOP) for the Validation of Organic Data Acquired using SW-846 Method 8260B, SOP No. HW-24, Revision 1, June 1999 and the USEPA Region II Standard Operating Procedure (SOP) for the Validation of Organic Data Acquired using SW-846 Method 8270C, SOP No. HW-22, Revision 2, June 2001.

The organic data were evaluated based on the following parameters:

*	• Data Completeness
*	• Holding Times and Sample Preservation
*	• Gas Chromatography/Mass Spectrometry (GC/MS) Tunes
	• Initial and Continuing Calibrations
	• Blanks
	• Surrogate Recoveries
	• Matrix Spike/Matrix Spike Duplicate (MS/MSD) Results
*	• Internal Standards
	• Laboratory Control Sample (LCS) Results
	• Moisture Content
NA	• Field Duplicate Results
	• Quantitation Limits and Data Assessment
*	• Sample Quantitation and Compound Identification

* - All criteria were met.

NA – A field duplicate pair was not associated with this sample set.

All results are usable for project objectives.

Qualifications applied to the data as a result of sampling error are discussed below.

- The positive and nondetect results for sample SP-CSD11 were qualified as estimated (J/UJ) due to high moisture content. The results are usable for project objectives as estimated values and nondetects with estimated quantitation limits. This qualification may have a minor impact on the data usability.

Qualifications applied to the data as a result of analytical error are discussed below.

- Potential uncertainty exists for select VOC and SVOC results which were below the lowest calibration standard and quantitation limit. The results were qualified as estimated (J) by the laboratory. These results can be used for project objectives as estimated values which may have a minor impact on the data usability.

- The positive results for methylene chloride in all samples were qualified as nondetects (U) at the quantitation limit (QL) due to laboratory blank contamination. The results are still usable for project objectives as nondetects. This qualification may have a minor impact on the data usability.

- The positive results for acetone in samples SP-CSD13SW, SP-CSD13S, SP-CSD12, and SP-CSE11 were qualified as estimated (J) due to initial calibration nonconformances. The direction of the bias cannot be determined from these nonconformances. The results can be used for project objectives as estimated values which may have a minor impact on the data usability.

- The positive and nondetect results for methyl ethyl ketone and carbon disulfide in samples SP-CSF10, SP-CSD13SW, SP-CSD13S, SP-CSD12, and SP-CSE11 and benzo(ghi)perylene in samples SP-CSF11, SP-CSD12, and SP-CSD11were qualified as estimated (J/UJ) due to continuing calibration nonconformances. The direction of the bias cannot be determined from these nonconformances. The results can be used for project objectives as estimated values and nondetects with estimated quantitation limits which may have a minor impact on the data usability.

The validation findings were based on the following information.

Data Completeness

The data package was complete as defined under the requirements for the NY ASP category B deliverables for the VOC and SVOC analyses.

Holding Times and Sample Preservation

All holding time and sample preservation criteria were met in the VOC and SVOC analyses.

GC/MS Tunes

All criteria were met in the VOC and SVOC analyses.

Initial and Continuing Calibrations

VOC

Compounds that did not meet criteria in the VOC initial and continuing calibrations are summarized in the following tables.

Instrument ID MSL Compound	IC 08/27/07
Bromomethane	X (20.4%)
Samples Affected	SP-CSF11, SP-CSD11

Instrument ID MSN Compound	IC 08/14/07	CC 09/11/07 08:03
Methyl ethyl ketone	X (15.9%)	XX (27.9%)
Acetone	X (27.4%)	
Carbon disulfide		XX (27.9%)
Samples Affected	All samples listed	SP-CSF10, SP-CSD13SW, SP-CSD13S, SP-CSD12, SP-CSE11

X = Initial calibration (IC) relative standard deviation (%RSD) > 15; estimate (J) positive results only.
XX = Continuing calibration (CC) percent difference (%D) > 20; estimate (J/UJ) positive and nondetect results.
XXX = Continuing calibration (CC) percent difference (%D) > 90; estimate (J) positive results and reject (R) nondetect results.
+ = Response factor (RRF) < 0.05; Estimate (J) positive results and reject (R) nondetect results.

Validation actions were not required for bromomethane in samples SP-CSF11 and SP-CSD11 due to initial calibration nonconformances as positive results are affected and these results were not detected.

The positive results for acetone in samples SP-CSD13SW, SP-CSD13S, SP-CSD12, and SP-CSE11 were estimated (J) due to continuing calibration nonconformances. Validation actions were not required for acetone in the remaining samples and methyl ethyl ketone in all samples due to initial calibration nonconformances as positive results are affected and these results were not detected.

The positive and nondetect results for methyl ethyl ketone and carbon disulfide in samples SP-CSF10, SP-CSD13SW, SP-CSD13S, SP-CSD12, and SP-CSE11 were estimated (J/UJ) due to continuing calibration nonconformances.

SVOC

Compounds that did not meet criteria in the SVOC initial and continuing calibrations are summarized in the following table.

Instrument ID **MSA** **Compound**	**IC** **09/05/07**	**CC** **08/24/07 10:59**
2,4-Dinitrophenol	X (15.1%)	
Benzo(ghi)perylene		XX (23.2%)
Samples Affected	All samples in this case number	SP-CSF11, SP-CSD12, SP-CSD11

X = Initial calibration (IC) relative standard deviation (%RSD) > 15; estimate (J) positive results only.
XX = Continuing calibration (CC) percent difference (%D) > 20; estimate (J/UJ) positive and nondetect results.
XXX = Continuing calibration (CC) percent difference (%D) > 90; estimate (J) positive results and reject (R) nondetect results.
+ = Response factor (RRF) < 0.05; Estimate (J) positive results and reject (R) nondetect results.

Qualification of the data was not required for 2,4-dinitrophenol due to initial calibration nonconformances as only positive results are affected and this compound was not detected in the case samples. The nondetect results for benzo(ghi)perylene in samples SP-CSF11, SP-CSD12, and SP-CSD11were estimated (UJ) due to continuing calibration nonconformances.

Blanks

VOCs

Methylene chloride was detected in the VOC method blanks. The presence of blank contamination indicates that false positives may exist for this compound in the associated samples. Action Levels (ALs) were established at 10x (for common contaminants) and 5x (for other compounds) the concentrations detected. The following table summarizes the ALs.

Compound	Type of Blank	Associated Samples	Maximum Concentration	Action Level
Methylene chloride	Method	SP-CSF10, SP-CSD13SW, SP-CSD13S, SP-CSD12, SP-CSE11	4.0 ug/kg	40 ug/kg
Methylene chloride	Method	SP-CSF11, SP-CSD11	51 ug/kg	510 ug/kg

Sample results were qualified as follows:

- If sample concentration was < the quantitation limit (QL) and ≤ the Action Level, qualify the result as a nondetect (U) at the QL.
- If sample concentration was > the QL and ≤ the Action Level, qualify the result as not detected (U) at the reported concentration.
- If the sample concentration was > the QL and > the Action Level, qualification of the data was not required.

The positive results for methylene chloride in all samples were qualified as nondetect (U) at the quantitation limit due to laboratory blank contamination.

SVOC

Target compounds were not detected in the SVOC method blank sample.

Surrogate Recoveries

VOC

All criteria were met in the VOC samples.

SVOC

The recovery for 2-Fluorophenol (24) was below the control limits of 25-113 in sample SP-CSD12. Validation action was not required on this basis as only one surrogate was below the acceptance criteria.

MS/MSD Results

MS/MSDs were not associated with the samples in this data set for the VOC and SVOC analyses.

Internal Standards

All criteria were met in the VOC and SVOC analyses.

LCS Results

VOC and SVOC

The following table lists the compounds recovered outside of the LCS analyses and the resulting actions.

Compound	Recovery (%)	Control Limits	Validation Actions
Cis-1.3-dichloropropene	120	44-112	Validation actions were not required as the results were nondetect and therefore not affected by the potential high bias.
1,1,2-Trichloroethane	124	63-123	
Methylene chloride	138	55-126	Validation actions were not required as the results were qualified as nondetect at the QL and therefore not affected by the potential high bias.
2,4-dinitrophenol	51	0-36	Validation actions were not required as the results were nondetect and therefore not affected by the potential high bias.

Moisture Content

Sample SP-CSD11 (48.5) had percent solids less than 50. The positive and nondetect results for sample SP-CSD11 were qualified as estimated (J/UJ).

Field Duplicate Results

A field duplicate pair was not associated with this sample set.

Quantitation Limits and Data Assessment

VOC

Results were reported which were below the lowest calibration standard level (QL) and above the method detection limit (MDL) in the VOC analyses. These results were qualified by the

laboratory (J). These results were qualified as estimated (J) due to uncertainty at the low end of calibration.

SVOC

Results were reported which were below the reporting limit (RL) and above the method detection limit (MDL) in the SVOC analyses. These results were qualified as estimated (J) by the laboratory. The results for naphthalene in samples SP-CSD13SW and SP-CSD12 and pyrene in sample SP-CSF11 were less than the reporting limit and estimated (J) by the laboratory. However, these compound results were above the lowest associated calibration standard; therefore, the 'J' qualifier was removed by the validator.

The following table lists the sample dilutions and analyses which were performed and reported.

Sample	VOC Analysis Reported	SVOC Analysis Reported
SP-CSD13SW	NR	A five-fold dilution was reported.
SP-CSF11	A medium level analysis was performed (5 grams/10 ml) and a subsequent 50-fold dilution was performed. The QLs were elevated 100-fold.	A 50-fold dilution was reported.
SP-CSD12	NR	A 20-fold dilution was reported.
SP-CSD11	A medium level analysis was performed (5 grams/10 ml) and a subsequent 25-fold dilution was performed. The QLs were elevated 50-fold.	A 50-fold dilution was reported.

NR- A dilution was not required

Sample Quantitation and Compound Identification

Calculations were spot-checked; no discrepancies were noted in the VOC and SVOC analyses.

Samples Reviewed and Evaluation Summary

FIELD ID	LAB ID	FRACTIONS VALIDATED
SP-CSF09S	Y3954-01	VOC, SVOC
SP-CSD09S	Y3954-02	VOC, SVOC
SP-CSG09E	Y3954-03	VOC, SVOC

Associated QC Samples:	Field/Trip Blanks:	None associated
	Field Duplicate pair:	None associated

The above-listed soil samples were collected on August 8, 2007 and were analyzed for volatile organic compounds (VOCs) by SW-846 method 8260B and semivolatile organic compounds (SVOCs) by SW-846 method 8270C. The data validation was based on the USEPA Region II Standard Operating Procedure (SOP) for the Validation of Organic Data Acquired using SW-846 Method 8260B, SOP No. HW-24, Revision 1, June 1999 and the USEPA Region II Standard Operating Procedure (SOP) for the Validation of Organic Data Acquired using SW-846 Method 8270C, SOP No. HW-22, Revision 2, June 2001.

The organic data were evaluated based on the following parameters:

*	•	Data Completeness
*	•	Holding Times and Sample Preservation
*	•	Gas Chromatography/Mass Spectrometry (GC/MS) Tunes
	•	Initial and Continuing Calibrations
	•	Blanks
*	•	Surrogate Recoveries
	•	Matrix Spike/Matrix Spike Duplicate (MS/MSD) Results
*	•	Internal Standards
	•	Laboratory Control Sample (LCS) Results
*	•	Moisture Content
NA	•	Field Duplicate Results
	•	Quantitation Limits and Data Assessment
*	•	Sample Quantitation and Compound Identification

* - All criteria were met.

NA -- A field duplicate pair was not associated with this sample set.

All results are usable for project objectives.

Qualifications were not applied to the data as a result of sampling error. Qualifications applied to the data as a result of analytical error are discussed below.

- Potential uncertainty exists for select SVOC results which were below the lowest calibration standard and quantitation limit. The results were qualified as estimated (J) by the laboratory. These results can be used for project objectives as estimated values which may have a minor impact on the data usability.

- The positive results for di-n-butylphthalate in samples SP-CSF09S and SP-CSD09S and bis(2-ethylhexyl)phthalate in sample SP-CSF09S were qualified as nondetects (U) at the quantitation limit (QL) due to laboratory blank contamination. The results are still usable for project objectives as nondetects. This qualification may have a minor impact on the data usability.

- The nondetect results for chloroethane and trichlorofluoromethane in all samples were qualified as estimated (UJ) due to continuing calibration nonconformances. The direction of the bias cannot be determined from these nonconformances. The results can be used for project objectives as nondetects with estimated quantitation limits which may have a minor impact on the data usability.

- The nondetect results for chloroethane, trichlorofluoromethane, and 1,1-dichloroethene in sample SP-CSG09E were qualified as estimated (UJ) due to low recoveries in the MS and/or MSD. The results may be biased low. The results can be used for project objectives as nondetects with estimated quantitation limits which may have a minor impact on the data usability.

- The nondetect results for 2,4-dinitrohenol in all samples were qualified as estimated (UJ) due to low recovery in the LCS. The results may be biased low. The results can be used for project objectives as nondetects with estimated quantitation limits which may have a minor impact on the data usability.

The validation findings were based on the following information.

Data Completeness

The data package was complete as defined under the requirements for the NY ASP category B deliverables for the VOC and SVOC analyses.

Holding Times and Sample Preservation

All holding time and sample preservation criteria were met in the VOC and SVOC analyses.

GC/MS Tunes

All criteria were met in the VOC and SVOC analyses.

Initial and Continuing Calibrations

VOC

Compounds that did not meet criteria in the VOC initial and continuing calibrations are summarized in the following tables.

Instrument ID MSVOAK Compound	IC 08/06/07	CC 08/09/07 10:58
Bromomethane	X (29.1%)	
Chloroethane	X (65.6%)	XX (33.1%)
Trichlorofluoromethane	X (36.8%)	XX (51.3%)
Samples Affected	All samples	All samples

X = Initial calibration (IC) relative standard deviation (%RSD) > 15; estimate (J) positive results only.
XX = Continuing calibration (CC) percent difference (%D) > 20; estimate (J/UJ) positive and nondetect results.
XXX = Continuing calibration (CC) percent difference (%D) > 90; estimate (J) positive results and reject (R) nondetect results.
+ = Response factor (RRF) < 0.05; Estimate (J) positive results and reject (R) nondetect results.

The %RSDs for methylene chloride, 1,1-dichloroethene, and 1,2,4-trichlorobenzene also exceeded the control limit of 15. However, the laboratory performed linear regression for these compounds and correlation coefficients were acceptable.

Validation actions were not required for bromomethane, chloroethane, and trichlorofluoromethane due to initial calibration nonconformances as positive results are affected and these results were not detected.

The nondetect results for chloroethane and trichlorofluoromethane in all samples were estimated (UJ) due to continuing calibration nonconformances.

SVOC

Compounds that did not meet criteria in the SVOC initial calibration are summarized in the following table.

Instrument ID BNAF Compound	**IC 07/30/07**
Benzaldehyde	X (18.9%)
Hexachlorocyclopentadiene	X (17.3%)
2,4-Dinitrophenol	X (27.5%)
Samples Affected	All samples

X = Initial calibration (IC) relative standard deviation (%RSD) > 15; estimate (J) positive results only.
XX = Continuing calibration (CC) percent difference (%D) > 20; estimate (J/UJ) positive and nondetect results.
XXX = Continuing calibration (CC) percent difference (%D) > 90; estimate (J) positive results and reject (R) nondetect results.
+ = Response factor (RRF) < 0.05; Estimate (J) positive results and reject (R) nondetect results.

Qualification of the data was not required for benzaldehyde, hexachlorocyclopentadiene, and 2,4-dinitrophenol due to initial calibration nonconformances as only positive results are affected and these compounds were not detected in the case samples.

Blanks

VOC

Target compounds were not detected in the VOC method blank sample.

SVOCs

Target compounds were detected in the SVOC method blank. The presence of blank contamination indicates that false positives may exist for this compound in the associated samples. Action Levels (ALs) were established at 10x (for common contaminants) and 5x (for other compounds) the concentrations detected. The following table summarizes the ALs.

Compound	Type of Blank	Associated Samples	Maximum Concentration	Action Level
Di-n-butylphthalate	Method	All samples	38.7 ug/kg	387 ug/kg
Bis(2-ethylhexyl)phthalate	Method	All samples	56 ug/kg	560 ug/kg

Compound	Type of Blank	Associated Samples	Maximum Concentration	Action Level
TIC ACP RT 2.69	Method	All samples	1300 ug/kg	6500 ug/kg

Sample results were qualified as follows:

- If sample concentration was < the quantitation limit (QL) and ≤ the Action Level, qualify the result as a nondetect (U) at the QL.
- If sample concentration was > the QL and ≤ the Action Level, qualify the result as not detected (U) at the reported concentration.
- If the sample concentration was > the QL and > the Action Level, qualification of the data was not required.

The positive results for di-n-butylphthalate in samples SP-CSF09S and SP-CSD09S and bis(2-ethylhexyl)phthalate in sample SP-CSF09S were qualified as nondetect (U) at the quantitation limit due to laboratory blank contamination.

The results for tentatively identified compound (TIC) ACP at retention time (RT) 2.69 were rejected (R) in all samples.

Surrogate Recoveries

All criteria were met in the VOC and SVOC samples.

MS/MSD Results

VOC

MS/MSD analyses were performed on sample SP-CSG09E. The following table lists the compounds recovered outside of control limits in the VOC analyses and the resulting validation actions.

Compound	Recovery (%)	RPD (%)	Control Limits	Validation Actions
Chloroethane	MS 59	-	66-123/20	Estimate (UJ) the nondetect results for chloroethane, trichlorofluoromethane, and 1,1-dichloroethene in sample SP-CSG09E.
Trichlorofluoromethane	45, 45	-	77-140/20	
1,1-dichloroethene	73, 77	-	82-154/22	
Methyl acetate	MSD 167	-		Validation action was not taken as the result for methyl acetate was nondetect and therefore not affected by the potential high bias.

SVOC

The recoveries for naphthalene (265, 482), 3,3'-dichlorobenzidine (20, 8), and hexachlorocyclopentadiene (MSD 19) and relative percent differences (RPDs) for naphthalene (58) and 3,3'-dichlorobenzidine (86) were outside of control limits in the MS/MSD performed on a non-project sample. Validation action was not required on this basis.

Internal Standards

All criteria were met in the VOC and SVOC analyses.

LCS Results

VOC

All criteria were met.

SVOC

The following table lists the compounds recovered outside of the LCS analysis and the resulting actions.

Compound	Recovery (%)	Control Limits	Validation Actions
2,4-dinitrophenol	24	26-131	Estimate (UJ) the nondetect results for 2,4-dinitrophenol in all samples.

Moisture Content

All criteria were met.

Field Duplicate Results

A field duplicate pair was not associated with this sample set.

Quantitation Limits and Data Assessment

VOC

The VOC analysis used one gram of sample instead of typical amount of five. Quantitation limits are therefore elevated by a factor of five.

SVOC

Results were reported which were below the reporting limit (RL) and above the method detection limit (MDL) in the SVOC analyses. These results were qualified as estimated (J) by the laboratory.

Sample Quantitation and Compound Identification

Calculations were spot-checked; no discrepancies were noted in the VOC and SVOC analyses.

Date: October 10, 2007

Samples Reviewed and Evaluation Summary

FIELD ID	LAB ID	FRACTIONS VALIDATED
SP-CSH9	Y3530-01	VOC, SVOC
SP-CSH10SW	Y3530-02	VOC, SVOC
SP-CSD10	Y3530-03	VOC, SVOC
SP-CSH9S	Y3530-04	VOC, SVOC
SP-CSH10F	Y3530-05	VOC, SVOC
SP-CSH10	Y3530-06	VOC, SVOC

Associated QC Samples:	Field/Trip Blanks:	None associated
	Field Duplicate pair:	SP-CSH9/SP-CSH9S

The above-listed soil samples were collected on July 12, 2007 and were analyzed for volatile organic compounds (VOCs) by SW-846 method 8260B and semivolatile organic compounds (SVOCs) by SW-846 method 8270C. The data validation was based on the USEPA Region II Standard Operating Procedure (SOP) for the Validation of Organic Data Acquired using SW-846 Method 8260B, SOP No. HW-24, Revision 1, June 1999 and the USEPA Region II Standard Operating Procedure (SOP) for the Validation of Organic Data Acquired using SW-846 Method 8270C, SOP No. HW-22, Revision 2, June 2001.

The organic data were evaluated based on the following parameters:

* • Data Completeness
* • Holding Times and Sample Preservation
* • Gas Chromatography/Mass Spectrometry (GC/MS) Tunes
• Initial and Continuing Calibrations
• Blanks
* • Surrogate Recoveries
• Matrix Spike/Matrix Spike Duplicate (MS/MSD) Results
* • Internal Standards
• Laboratory Control Sample (LCS) Results
* • Moisture Content
• Field Duplicate Results
• Quantitation Limits and Data Assessment
• Sample Quantitation and Compound Identification

* - All criteria were met.

NA – A field duplicate pair was not associated with this sample set.

All results are usable for project objectives.

Qualifications were not applied to the data as a result of sampling error.

- The positive results for methylene chloride in samples SP-CSH9 and SP-CSH9S were qualified as estimated (J) due to high relative percent difference (RPD) due to evaluation in the field duplicate pair. The results are usable for project objectives as estimated values which may have a minor impact on the data usability.

Qualifications applied to the data as a result of analytical error are discussed below.

- Potential uncertainty exists for select VOC and SVOC results which were below the lowest calibration standard and quantitation limit. The results were qualified as estimated (J) by the laboratory. These results can be used for project objectives as estimated values which may have a minor impact on the data usability.

- The nondetect results for bromomethane, chloroethane, and trichlorofluoromethane in all samples were qualified as estimated (UJ) due to continuing calibration nonconformances. The direction of the bias cannot be determined from these nonconformances. The results can be used for project objectives as nondetects with estimated quantitation limits which may have a minor impact on the data usability.

- The nondetect results for chloroethane, 4-chloroaniline, 3-nitroaniline, and 3,3'-dichlorobenzidine in all samples were qualified as estimated (UJ) due to low recoveries in the LCS. The results may be biased low. The results can be used for project objectives as nondetects with estimated quantitation limits which may have a minor impact on the data usability.

- The positive results for acetone in samples SP-CSH9, SP-CSH10SW, SP-CSD10, SP-CSH9S, and SP-CSH10 were qualified as estimated (J) due to high recovery in the LCS. The results may be biased high. The results can be used for project objectives as estimated values which may have a minor impact on the data usability.

The validation findings were based on the following information.

Data Completeness

The data package was complete as defined under the requirements for the NYSDEC ASP category B deliverables for the VOC and SVOC analyses.

Holding Times and Sample Preservation

All holding time and sample preservation criteria were met in the VOC and SVOC analyses.

GC/MS Tunes

All criteria were met in the VOC and SVOC analyses.

Initial and Continuing Calibrations

VOC

Compounds that did not meet criteria in the VOC initial and continuing calibrations are summarized in the following tables.

Instrument ID MSVOAK Compound	IC 07/04/07	CC 07/16/07 11:24
Bromomethane	X (19.5%)	XX (20.9%)
Chloroethane	X (55.7%)	XX (56.7%)
Trichlorofluoromethane	X (38.8%)	XX (28.8%)
1,1,2-Trichlorotrifluoroethane	X (18.5%)	
1,1-Dichloroethene	X (20.2%)	
Carbon disulfide	X (16.9%)	
Methylene chloride		
Samples Affected	All low level samples	All low level samples

Instrument ID MSVOAH Compound	IC 07/16/07	IC 07/19/07
Chloromethane		X (16.2%)
Dichlorodifluoromethane	X (15.6%)	X (15.1%)
Bromomethane	X (16.8%)	X (24.2%)
Acetone	X (34.3%)	
Methyl acetate	X (15.3%)	
2-Butanone	X (28.2%)	

Instrument ID MSVOAH Compound	IC 07/16/07	IC 07/19/07
trans-1,3-Dichloropropene	X (18.7%)	
Bromoform	X (22.7%)	
Trichlorofluoromethane		X (19.7%)
Samples Affected	Medium level QC samples	Medium level SP-CSH10SW

X = Initial calibration (IC) relative standard deviation (%RSD) > 15; estimate (J) positive results only.
XX = Continuing calibration (CC) percent difference (%D) > 20; estimate (J/UJ) positive and nondetect results.
XXX = Continuing calibration (CC) percent difference (%D) > 90; estimate (J) positive results and reject (R) nondetect results.
+ = Response factor (RRF) < 0.05; Estimate (J) positive results and reject (R) nondetect results.

Validation actions were not required for bromomethane, chloroethane, trichlorofluoromethane, 1,1,2-trichlorotrifluoroethane, 1,1-dichloroethene, and carbon disulfide in the low level analyses due to initial calibration nonconformances as positive results are affected and these results were not detected.

The nondetect results for bromomethane, chloroethane, and trichlorofluoromethane in all samples were estimated (UJ) due to continuing calibration nonconformances.

Validation actions were not required for all affected compounds in the medium level analyses as the affected compounds were not reported from the medium level analysis.

SVOC

All criteria were met.

Blanks

SVOC

Target compounds were not detected in the SVOC method blank sample.

The results for tentatively identified compound (TIC) ACP at retention time (RT) 3.47 were rejected (R) in all samples.

VOC

Target compounds were not detected in the VOC method blank sample.

Surrogate Recoveries

All criteria were met in the VOC and SVOC analyses.

MS/MSD Results

VOC

The recoveries for chloroethane (38, 52), trichlorofluoromethane (MS 60), 4-methyl-2-pentanone (MS 70), trans-1,3-dichloropropene (MS 72), 2-hexanone (MS 66), and 1,2-dibromoethane (MS 68) and relative percent differences (RPDs) for chloroethane (31), trichlorofluoromethane (70), 4-methyl-2-pentanone (39), 2-hexanone (45), 1,2-dibromoethane (34), bromomethane (24), methyl acetate (38), 2-butanone (36), 1,2-dichloroethene (21), 1,1,2-trichloroethane (22), bromoform (31), 1,1,2.2-tetrachloroethane (25), and 1,2-dibromo-3-chloropropane (40) were outside of control limits in the low level MS/MSD performed on a non-project sample (Y3513-07). Validation action was not required on this basis.

The recovery for trichlorofluoromethane (MSD 74) was outside of control limits in the low level MS/MSD performed on a non-project sample (Y3353-01). Validation action was not required on this basis.

SVOC

The recoveries for 2,4-dinitrophenol (MS 22), 4,6-dinitro-2-methylphenol (25, 26), 4-chloroaniline (MSD 12), and 2,4-dinitrophenol (MSD 5) and relative percent differences (RPDs) for 4-chloroaniline (67), and 2,4-dinitrophenol (126) were outside of control limits in the low level MS/MSD performed on a non-project sample (Y3513-04). Validation action was not required on this basis.

Internal Standards

All criteria were met in the VOC and SVOC analyses.

LCS Results

The following table lists the compounds recovered outside of control limits in the LCS VOC and SVOC analyses and the resulting actions.

Compound	Recovery (%)	Control Limits	Associated Samples	Validation Actions
4-Chloroaniline	13	15-92	All samples	Estimate (UJ) the nondetect results for 4-chloroaniline, 3-nitroaniline, and 3,3'-dichlorobenzidine in all samples.
3-Nitroaniline	25	27-88		
3,3'-Dichlorobenzidine	23	31-111		
Acetone	150	70-130	All low level samples	Estimate (J) the positive results for acetone in samples SP-CSH9, SP-CSH10SW, SP-CSD10, SP-CSH9S, and SP-CSH10.
Chloroethane	55	70-130	All low level samples	Estimate (UJ) the nondetect results for chloroethane in all samples.
Dichlorodifluoromethane	60	70-130	QC samples only	Validation actions were not required on this basis.
Chloromethane	65			
Vinyl chloride	65			
Trichlorofluoromethane	65			
1,1,2-trichlorotrifluoroethane	55			
Carbon disulfide	60			
Cyclohexane	60			
Methylcyclohexane	60			
cis-1,3-Dichloropropene	65			
Dibromochloromethane	65			

Moisture Content

All criteria were met.

Field Duplicate Results

Samples SP-CSH9 and SP-CSH9S were submitted as the field duplicate pair with this sample group. The following table summarizes the RPDs of the detected analytes, all of which were acceptable with the exception of methylene chloride. The positive results for methylene chloride in samples SP-CSH9 and SP-CSH9S were estimated (J).

Analyte	SP-CSH9 (ug/kg)	SP-CSH9S (ug/kg)	RPD (%)
Acetone	390	290	29.4
Methylene chloride	300	170	55.3
Ethylbenzene	30	35 U	NC, Within 2xQL

Analyte	SP-CSH9 (ug/kg)	SP-CSH9S (ug/kg)	RPD (%)
m/p-Xylene	49	69 U	NC, Within 2xQL
o-Xylene	44	29	41.1
3&4-Methylphenol	96	470 U	NC, Within 2xQL
Naphthalene	570	160	112.3, Within 2xQL
2-Methylnaphthalene	93	470 U	NC, Within 2xQL
Acenaphthene	310	160	63.8, Within 2xQL
Dibenzofuran	130	470 U	NC, Within 2xQL
Fluorene	260	220	16.7
Phenanthrene	1500	2000	28.6
Anthracene	560	760	30.3
Fluoranthene	2100	2900	32.0
Pyrene	1900	2600	31.1
Benzo(a)anthracene	950	1400	38.3
Chrysene	860	1200	33.0
Benzo(b)fluoranthene	970	1300	29.1
Benzo(k)fluoranthene	420	470	11.2
Benzo(a)pyrene	950	1200	23.2
Indeno(123-cd)pyrene	540	710	27.2
Benzo(ghi)perylene	550	710	25.4
Acenaphthylene	530 U	120	NC, Within 2xQL
Dibenz(ah)anthracene	530 U	86	NC, Within 2xQL

For soil results > 5xQL and RPDs >50; estimate (J) results in the field duplicate pair.
For soil results < 5xQL; the sample and duplicate results must be within 2x QL.

Quantitation Limits and Data Assessment

The following table lists the sample dilutions and analyses which were performed and reported.

Sample	VOC Analysis Reported	SVOC Analysis Reported
SP-CSC10SW	Report results for benzene, toluene, ethylbenzene, m/p-xylenes, and o-xylene from the medium level analysis. Report remaining compounds from low level analysis.	Report result for naphthalene from the 100-fold dilution analysis. Report results for phenanthrene and fluoranthene from the 20-fold dilution analysis. Report results for 2,4-dimethylphenol, 2-methylnaphthalene, acenaphthene, dibenzofuran, fluorene, anthracene, pyrene, benzo(a)anthracene, chrysene, benzo(b)fluoranthene, and benzo(a)pyrene from the 5-fold dilution analysis. Report remaining compounds from undiluted analysis.
SP-CSH9S	NR	Report results for phenanthrene, anthracene, fluoranthene, pyrene, benzo(a)anthracene, chrysene, benzo(b)fluoranthene, and benzo(a)pyrene from the 25-fold dilution analysis. Report results for acanaphthene, dibenzofuran, fluorene, indeno(123-cd)pyrene, benzo(k)fluoranthene, and benzo(ghi)perylene from the 5-fold dilution analysis. Report remaining compounds from undiluted analysis.
SP-CSH9S	NR	Report result for fluoranthene from the 2-fold dilution. Report remaining compounds from undiluted analysis.

NR- A dilution was not required

VOC

Results were reported which were below the reporting limit (RL) and above the method detection limit (MDL) in the SVOC analyses. These results were qualified as estimated (J) by the laboratory.

The VOC analysis used one gram of sample instead of the typical amount of five. Quantitation limits are therefore elevated by a factor of five.

SVOC

Results were reported which were below the reporting limit (RL) and above the method detection limit (MDL) in the SVOC analyses. These results were qualified as estimated (J) by the laboratory.

Sample Quantitation and Compound Identification

Calculations were spot-checked; no discrepancies were noted in the VOC and SVOC analyses.

VOC

All criteria were met.

SVOC

Target compound, toluene, was reported as a tentatively identified compound (TIC) in SVOC sample SP-CSD10. Target compound, ethylbenzene, was reported as a tentatively identified compound (TIC) in SVOC sample SP-CSH10SW. As the results were reported as target compounds in the VOC samples, the TIC results were rejected (R).

Starlight Park, Project 013943-3-1102

Project: Starlight Park
Laboratory: Chemtech, Mountainside, NJ
Report No.: Y4053
Reviewer: Lisa McDonagh/GEI Consultants
Date: October 12, 2007

Samples Reviewed and Evaluation Summary

FIELD ID	LAB ID	FRACTIONS VALIDATED
SP-CS19	Y4053-01	VOC, SVOC
SP-CS18	Y4053-02	VOC, SVOC
Associated QC Samples:	Field/Trip Blanks:	None associated
	Field Duplicate pair:	None associated

The above-listed soil samples were collected on August 15, 2007 and were analyzed for volatile organic compounds (VOCs) by SW-846 method 8260B and semivolatile organic compounds (SVOCs) by SW-846 method 8270C. The data validation was based on the USEPA Region II Standard Operating Procedure (SOP) for the Validation of Organic Data Acquired using SW-846 Method 8260B, SOP No. HW-24, Revision 1, June 1999 and the USEPA Region II Standard Operating Procedure (SOP) for the Validation of Organic Data Acquired using SW-846 Method 8270C, SOP No. HW-22, Revision 2, June 2001.

The organic data were evaluated based on the following parameters:

*	•	Data Completeness
*	•	Holding Times and Sample Preservation
*	•	Gas Chromatography/Mass Spectrometry (GC/MS) Tunes
	•	Initial and Continuing Calibrations
	•	Blanks
*	•	Surrogate Recoveries
	•	Matrix Spike/Matrix Spike Duplicate (MS/MSD) Results
*	•	Internal Standards
	•	Laboratory Control Sample (LCS) Results
*	•	Moisture Content
NA	•	Field Duplicate Results
	•	Quantitation Limits and Data Assessment
*	•	Sample Quantitation and Compound Identification

* - All criteria were met.

NA – A field duplicate pair was not associated with this sample set.

All results are usable for project objectives.

Qualifications were not applied to the data as a result of sampling error.
Qualifications applied to the data as a result of analytical error are discussed below.

- Potential uncertainty exists for select VOC and SVOC results, which were below the lowest calibration standard and quantitation limit. The results were qualified as estimated (J) by the laboratory. These results can be used for project objectives as estimated values, which may have a minor impact on the data usability.

- The SVOC Tentatively Identified compounds in sample SP-CS18, ACP at retention time 4.07 was rejected (R) due to method blank contamination.

- The VOC nondetect results for chloroethane and trichlorofluoromethane in samples SP-CS19 and SP-CS18 were qualified as estimated (UJ) due to calibration nonconformances. The direction of the bias cannot be determined from these nonconformances. The results can be used for project objectives as estimated quantitation limits, which may have a minor impact on the data usability.

- The positive and/or nondetect SVOC results were qualified as estimated (J/UJ) due to LCS recovery, which was below control limits: 4-chloro-3-methylphenol and benzo(a)anthracene in all samples Y4053. The result may be biased low. The positive results can be used as estimated values and the nondetect results can be used for project objectives as estimated quantitation limits. These qualifications may have a minor impact on the data usability.

The validation findings were based on the following information.

Data Completeness

The data package was complete as defined under the requirements for the CLP-like deliverables for the VOC and SVOC analyses.

Holding Times and Sample Preservation

All holding time and sample preservation criteria were met in the VOC and SVOC analyses.

GC/MS Tunes

All criteria were met in the VOC and SVOC analyses.

Initial and Continuing Calibrations

VOC

Compounds that did not meet criteria in the VOC initial and continuing calibrations are summarized in the following table.

Instrument ID MSVOAK Compound	IC 8/6/07	CC 8/15/07
bromomethane	X(29.1%)	
chloroethane	X(65.6%)	XX(40.6%)
trichlorofluoromethane	X(36.8%)	XX(48.8%)
Samples Affected	SP-CS19 SP-CS18	SP-CS19 SP-CS18

X = Initial calibration (IC) relative standard deviation (%RSD) > 15; estimate (J) positive results only.
XX = Continuing calibration (CC) percent difference (%D) > 20; estimate (J/UJ) positive and nondetect results.
XXX = Continuing calibration (CC) percent difference (%D) > 90; estimate (J) positive results and reject (R) nondetect results.
+ = Response factor (RRF) < 0.05; Estimate (J) positive results and reject (R) nondetect results.

The VOC nondetect results for chloroethane and trichlorofluoromethane in samples SP-CS19 and SP-CS18 were qualified as estimated (UJ) due to calibration nonconformances.

SVOC

All criteria were met in the SVOC analyses.

Blanks

VOC

Target compounds were not detected in the VOC method blank.

SVOC

Target compounds were not detected in the SVOC method blank.

The Tentatively Identified compounds in sample SP-CS18, ACP at retention time 4.07 was rejected (R) due to method blank contamination.

Surrogate Recoveries

VOC

All criteria were met in the VOC samples.

SVOC

All criteria were met in the SVOC samples.

MS/MSD Results

VOC

Batch QC was submitted for the MS/MSD analyses for the VOC analyses.

SVOC

Batch QC was submitted for the MS/MSD analyses for the SVOC analyses.

Internal Standards

All criteria were met in the VOC and SVOC samples.

LCS Results

VOC:

The following table lists the compounds recovered outside of the LCS analyses and the resulting actions.

Compound	Recovery (%)	Control Limits	Validation Actions
acetone	140	70-130	Validation actions were not required. QC samples were associated with the LCS.

SVOC:

The following table lists the compounds recovered outside of the LCS analyses and the resulting actions.

Compound	Recovery (%)	Control Limits	Validation Actions
4-chloro-3-methylphenol	59	60-100	The nondetect results for 4-chloro-3-methylphenol and benzo(a)anthracene in all samples Y4053 were qualified as estimated (UJ).
4-nitrophenol	173	45-95	
benzo(a)anthracene	59	60-100	

Moisture Content

All criteria were met for the sample in this data package.

Field Duplicate Results

A field duplicate pair was not associated with this sample set.

Quantitation Limits and Data Assessment

VOC

Results were reported which were below the lowest calibration standard level (QL) and above the method detection limit (MDL) in the VOC analyses. These results were qualified by the laboratory (J). These results were qualified as estimated (J) due to uncertainty at the low end of calibration.

Samples were analyzed at a 1:1 dilution.

SVOC

Results were reported which were below the reporting limit (RL) and above the method detection limit (MDL) in the SVOC analyses. These results were qualified as estimated (J) by the laboratory. These results were qualified as estimated (J) due to uncertainty at the low end of calibration.

The following tables list the sample dilutions, which were performed and reported. Quantitation limits were elevated accordingly.

Sample	SVOC Analysis/Dilution Factor
SP-CS19	1:5 dilution and 1:25 dilution. Report fluoranthene, pyrene, benzo(a)anthracene, benzo(b)fluoranthene and benzo(a)pyrene from the 1:25 dilution. Report all other results from the 1:5 dilution.
SP-CS18	1:5 dilution.

Sample Quantitation and Compound Identification

Calculations were spot-checked; no discrepancies were noted in the VOC and SVOC analyses.

The following tables list the sample dilutions, which were performed and reported. Quantitation limits were elevated accordingly.

Sample	SVOC Analysis/Dilution Reported
SP-CS19	1:5 dilution and 1:25 dilution. Report fluoranthene, pyrene, benzo(a)anthracene, benzo(b)fluoranthene and benzo(a)pyrene from the 1:25 dilution. Report all other results from the 1:5 dilution.
SP-CS18	1:5 dilution.

Sample Quantitation and Compound Identification

Calculations were spot-checked; no discrepancies were noted in the VOC and SVOC analyses.

Date: October 12, 2007

Samples Reviewed and Evaluation Summary

FIELD ID	LAB ID	FRACTIONS VALIDATED
SP-CSG9E2	Y4021-01	VOC, SVOC
Associated QC Samples:	Field/Trip Blanks:	None associated
	Field Duplicate pair:	None associated

The above-listed soil samples were collected on August 14, 2007 and were analyzed for volatile organic compounds (VOCs) by SW-846 method 8260B and semivolatile organic compounds (SVOCs) by SW-846 method 8270C. The data validation was based on the USEPA Region II Standard Operating Procedure (SOP) for the Validation of Organic Data Acquired using SW-846 Method 8260B, SOP No. HW-24, Revision 1, June 1999 and the USEPA Region II Standard Operating Procedure (SOP) for the Validation of Organic Data Acquired using SW-846 Method 8270C, SOP No. HW-22, Revision 2, June 2001.

The organic data were evaluated based on the following parameters:

*	•	Data Completeness
*	•	Holding Times and Sample Preservation
*	•	Gas Chromatography/Mass Spectrometry (GC/MS) Tunes
	•	Initial and Continuing Calibrations
	•	Blanks
*	•	Surrogate Recoveries
	•	Matrix Spike/Matrix Spike Duplicate (MS/MSD) Results
*	•	Internal Standards
	•	Laboratory Control Sample (LCS) Results
*	•	Moisture Content
NA	•	Field Duplicate Results
	•	Quantitation Limits and Data Assessment
*	•	Sample Quantitation and Compound Identification

* - All criteria were met.

NA – A field duplicate pair was not associated with this sample set.

- All results are usable for project objectives, with the exception of the SVOC Tentatively Identified compounds in sample SP-CSG9E2, ACP at retention time 4.06 and 2,6,10-trimethyl at retention time 23.27 due to method blank contamination.

Qualifications were not applied to the data as a result of sampling error.
Qualifications applied to the data as a result of analytical error are discussed below.

- Potential uncertainty exists for select VOC and SVOC results, which were below the lowest calibration standard and quantitation limit. The results were qualified as estimated (J) by the laboratory. These results can be used for project objectives as estimated values, which may have a minor impact on the data usability.

- The SVOC positive results for bis(2-ethylhexyl)phthalate in sample SP-CSG9E2 was qualified as a nondetect (U) at the quantitation limit (QL) due to laboratory blank contamination. The results are still usable for project objectives as nondetects. This qualification may have a minor impact on the data usability.

- The SVOC Tentatively Identified compounds in sample SP-CSG9E2, ACP at retention time 4.06 and 2,6,10-trimethyl at retention time 23.27 were rejected (R) due to method blank contamination.

- The VOC positive and nondetect results for trichlorofluoromethane, acetone and 1,2-dichloroethane in sample SP-CSG9E2 were qualified as estimated (J/UJ) due to calibration nonconformances. The direction of the bias cannot be determined from these nonconformances. The results can be used for project objectives as estimated values and nondetects with estimated quantitation limits, which may have a minor impact on the data usability.

- The SVOC positive results for chrysene in sample SP-CSG9E2 was qualified as estimated (J) due to calibration nonconformances. The direction of the bias cannot be determined from these nonconformances. The result can be used for project objectives as an estimated value, which may have a minor impact on the data usability.

- The positive VOC result was qualified as estimated (J) due to LCS recovery, which was above control limits: acetone in sample SP-CSG9E2. The result may be biased high. The positive result can be used for project objectives as an estimated value. The qualification may have a minor impact on the data usability.

The validation findings were based on the following information.

Data Completeness

The data package was complete as defined under the requirements for the CLP-like deliverables for the VOC and SVOC analyses.

Holding Times and Sample Preservation

All holding time and sample preservation criteria were met in the VOC and SVOC analyses.

GC/MS Tunes

All criteria were met in the VOC and SVOC analyses.

Initial and Continuing Calibrations

VOC

Compounds that did not meet criteria in the VOC initial and continuing calibrations are summarized in the following table.

Instrument ID MSVOAK Compound	IC 8/6/07	CC 8/15/07
bromomethane	X(29.1%)	
chloroethane	X(65.6%)	
trichlorofluoromethane	X(36.8%)	XX(38.8%)
1,1-dichloroethene	X(16.7%)	
methylene chloride	X(15.5%)	
acetone		XX(22.1%)
1,2-dichloroethane		XX(23.1%)
naphthalene	X(28.2%)	
1,2,3-trichlorobenzene	X(21.0%)	
Samples Affected	SP-CSG9E2	SP-CSG9E2

X = Initial calibration (IC) relative standard deviation (%RSD) > 15; estimate (J) positive results only.
XX = Continuing calibration (CC) percent difference (%D) > 20; estimate (J/UJ) positive and nondetect results.
XXX = Continuing calibration (CC) percent difference (%D) > 90; estimate (J) positive results and reject (R) nondetect results.
+ = Response factor (RRF) < 0.05; Estimate (J) positive results and reject (R) nondetect results.

The VOC positive and nondetect results for trichlorofluoromethane, acetone and 1,2-dichloroethane in sample SP-CSG9E2 were qualified as estimated (J/UJ) due to calibration nonconformances.

SVOC

Compounds that did not meet criteria in the SVOC initial and continuing calibrations are summarized in the following table.

Instrument ID MSA Compound	IC 8/1/07	CC 8/15/07
chrysene	X(23.8%)	
Samples Affected	SP-CSG9E2	SP-CSG9E2

X = Initial calibration (IC) relative standard deviation (%RSD) > 15; estimate (J) positive results only.
XX = Continuing calibration (CC) percent difference (%D) > 20; estimate (J/UJ) positive and nondetect results.
XXX = Continuing calibration (CC) percent difference (%D) > 90; estimate (J) positive results and reject (R) nondetect results.
+ = Response factor (RRF) < 0.05; Estimate (J) positive results and reject (R) nondetect results.

The SVOC positive result for chrysene in sample SP-CSG9E2 was qualified as estimated (J) due to calibration nonconformances.

Blanks

VOC

Target compounds were not detected in the VOC method blank.

SVOC

Bis(2-ethylhexyl)phthalate was detected in the SVOC method blank. The presence of blank contamination indicates that false positives may exist for this compound in the associated samples. Action Levels (ALs) were established at 10x (for common contaminants) and 5x (for other compounds) the concentrations detected. The following table summarizes the AL.

Compound	Type of Blank	Associated Samples	Maximum Concentration	Action Level
Bis(2-ethylhexyl)phthalate	Method	SP-CSG9E2	110 ug/kg	1100 ug/kg

The SVOC positive results for bis(2-ethylhexyl)phthalate in sample SP-CSG9E2 was qualified as a nondetect (U) at the quantitation limit (QL) due to laboratory blank contamination.

The Tentatively Identified compounds in sample SP-CSG9E2, ACP at retention time 4.06 and 2,6,10-trimethyl at retention time 23.27 were rejected (R) due to method blank contamination.

Surrogate Recoveries

VOC

All criteria were met in the VOC samples.

SVOC

All criteria were met in the SVOC samples.

MS/MSD Results

VOC

Batch QC was submitted for the MS/MSD analyses for the VOC analyses.

SVOC

Batch QC was submitted for the MS/MSD analyses for the SVOC analyses.

Internal Standards

All criteria were met in the VOC and SVOC samples.

LCS Results

VOC:

The following table lists the compounds recovered outside of the LCS analyses and the resulting actions.

Compound	Recovery (%)	Control Limits	Validation Actions
acetone	140	70-130	Estimate (J) the positive result for acetone in sample SP-CSG9E2.

SVOC:

All criteria were met in the SVOC analyses.

Moisture Content

All criteria were met for the sample in this data package.

Field Duplicate Results

A field duplicate pair was not associated with this sample set.

Quantitation Limits and Data Assessment

VOC

Results were reported which were below the lowest calibration standard level (QL) and above the method detection limit (MDL) in the VOC analyses. These results were qualified by the laboratory (J). These results were qualified as estimated (J) due to uncertainty at the low end of calibration.

Samples were analyzed at a 1:1 dilution.

SVOC

Results were reported which were below the reporting limit (RL) and above the method detection limit (MDL) in the SVOC analyses. These results were qualified as estimated (J) by the laboratory. These results were qualified as estimated (J) due to uncertainty at the low end of calibration.

Samples were analyzed at a 1:1 dilution.

Sample Quantitation and Compound Identification

Calculations were spot-checked; no discrepancies were noted in the VOC and SVOC analyses.

Starlight Park, Project 013943-3-1102

Project: Starlight Park
Laboratory: Chemtech, Mountainside, NJ
Report No.: Y4088
Reviewer: Lisa McDonagh/GEI Consultants
Date: October 12, 2007

Samples Reviewed and Evaluation Summary

FIELD ID	LAB ID	FRACTIONS VALIDATED
SP-CSG10E	Y4088-01	VOC, SVOC
SP-CSG10W	Y4088-02	VOC, SVOC
SP-CSG9W	Y4088-03	VOC, SVOC
Associated QC Samples:	Field/Trip Blanks:	None associated
	Field Duplicate pair:	None associated

The above-listed soil samples were collected on August 17, 2007 and were analyzed for volatile organic compounds (VOCs) by SW-846 method 8260B and semivolatile organic compounds (SVOCs) by SW-846 method 8270C. The data validation was based on the USEPA Region II Standard Operating Procedure (SOP) for the Validation of Organic Data Acquired using SW-846 Method 8260B, SOP No. HW-24, Revision 1, June 1999 and the USEPA Region II Standard Operating Procedure (SOP) for the Validation of Organic Data Acquired using SW-846 Method 8270C, SOP No. HW-22, Revision 2, June 2001.

The organic data were evaluated based on the following parameters:

*	•	Data Completeness
*	•	Holding Times and Sample Preservation
*	•	Gas Chromatography/Mass Spectrometry (GC/MS) Tunes
	•	Initial and Continuing Calibrations
	•	Blanks
*	•	Surrogate Recoveries
	•	Matrix Spike/Matrix Spike Duplicate (MS/MSD) Results
*	•	Internal Standards
*	•	Laboratory Control Sample (LCS) Results
*	•	Moisture Content
NA	•	Field Duplicate Results
	•	Quantitation Limits and Data Assessment
*	•	Sample Quantitation and Compound Identification

* - All criteria were met.

NA – A field duplicate pair was not associated with this sample set.

All results are usable for project objectives.

Qualifications were not applied to the data as a result of sampling error.
Qualifications applied to the data as a result of analytical error are discussed below.

- Potential uncertainty exists for select VOC and SVOC results, which were below the lowest calibration standard and quantitation limit. The results were qualified as estimated (J) by the laboratory. These results can be used for project objectives as estimated values, which may have a minor impact on the data usability.

- The SVOC Tentatively Identified compounds in samples SP-CSG10E, SP-CSG10W and SP-CSG9W, ACP at retention time 4.07 was rejected (R) due to method blank contamination.

- The SVOC Tentatively Identified compounds in samples SP-CSG10E, ethylbenzene, 1,3-dimethylbenzene and p-xylene were rejected (R) these compounds are target compounds for the VOC fraction of the sample.

- The VOC positive and/or nondetect results for dichlorodifluoromethane and trichlorofluoromethane in samples SP-CSG10W and SP-CSG9W and chloroethane, trichlorofluoromethane, acetone, 1,1-dichloroethane, 2-butanone, cyclohexane, 1,2-dichloroethane and 1,2,4-trichlorobenzene in sample SP-CSG10E were qualified as estimated (J/UJ) due to calibration nonconformances. The direction of the bias cannot be determined from these nonconformances. The positive results can be used for project objectives as estimated values and nondetect results can be used for project objectives as estimated quantitation limits, which may have a minor impact on the data usability.

- The following SVOC nondetect results were qualified as estimated(UJ) due to MS/MSD %recoveries which were below the control limits: 2,4-dinitrophenol, 4,6-dinitro-2-methylphenol and indeno(1,2,3-cd)pyerene in sample SP-CSG10E can be used for project objective as estimated values. These qualifications may have a minor impact on the data usability.

The validation findings were based on the following information.

Data Completeness

The data package was complete as defined under the requirements for the CLP-like deliverables for the VOC and SVOC analyses.

Holding Times and Sample Preservation

All holding time and sample preservation criteria were met in the VOC and SVOC analyses.

GC/MS Tunes

All criteria were met in the VOC and SVOC analyses.

Initial and Continuing Calibrations

VOC

Compounds that did not meet criteria in the VOC initial and continuing calibrations are summarized in the following table.

Instrument ID MSVOAK Compound	IC 8/6/07	CC 8/20/07	CC 8/21/07
dichlorodifluoromethane		XX(29.4%)	
bromomethane	X(29.1%)		
chloroethane	X(65.6%)		XX(29.7%)
trichlorofluoromethane	X(36.8%)	XX(22.5%)	XX(46.5%)
acetone			XX(35.3%)
methylene chloride	X(15.5%)		
1,1-dichloroethane			XX(21.8%)
cyclohexane			XX(20.9%)
2-butanone			XX(24.6%)
1,2-dichloroethane			XX(25.6%)
1,2,4-trichlorobenzene			XX(23.0%)
Samples Affected	SP-CSG10E SP-CSG10W SP-CSG9W	SP-CSG10W SP-CSG9W	SP-CSG10E

X = Initial calibration (IC) relative standard deviation (%RSD) > 15; estimate (J) positive results only.
XX = Continuing calibration (CC) percent difference (%D) > 20; estimate (J/UJ) positive and nondetect results.
XXX = Continuing calibration (CC) percent difference (%D) > 90; estimate (J) positive results and reject (R) nondetect results.
+ = Response factor (RRF) < 0.05; Estimate (J) positive results and reject (R) nondetect results.

The VOC positive and/or nondetect results for dichlorodifluoromethane and trichlorofluoromethane in samples SP-CSG10W and SP-CSG9W and chloroethane, trichlorofluoromethane, acetone, 1,1-dichloroethane, 2-butanone, cyclohexane, 1,2-dichloroethane and 1,2,4-trichlorobenzene in sample SP-CSG10E were qualified as estimated (J/UJ) due to calibration nonconformances.

SVOC

All criteria were met in the SVOC analyses.

Blanks

VOC

Target compounds were not detected in the VOC method blank.

SVOC

Target compounds were not detected in the SVOC method blank.

The Tentatively Identified compounds in samples SP-CSG10E, SP-CSG10W and SP-CSG9W, ACP at retention time 2.63 were rejected (R) due to method blank contamination.

Surrogate Recoveries

VOC

All criteria were met in the VOC samples.

SVOC

All criteria were met in the SVOC samples.

MS/MSD Results

VOC

Batch QC was submitted for the MS/MSD analyses for the VOC analyses.

SVOC

An MS/MSD was performed on sample SP-CSG10E for the SVOC analyses. The following table lists the SVOC MS/MSD %recoveries and/or %RPDs which were outside of the laboratory established control limits.

Compound	MS/MSD %R	RPD %	QC Limits	Validation Action
2,4-dinitrophenol	23/23	-	26-131	Estimate the nondetect results (UJ) for 2,4-dinitrophenol, 4,6-dinitro-2-methylphenol and indeno(1,2,3-cd)pyrene in sample SP-CSG10E.
4,6-dinitro-2-methylphenol	30/33	-	40-105	
indeno(1,2,3-cd)pyrene	37/37	-	42-124	

Internal Standards

All criteria were met in the VOC and SVOC samples.

LCS Results

All criteria were met in the VOC and SVOC samples.

Moisture Content

All criteria were met for the sample in this data package.

Field Duplicate Results

A field duplicate pair was not associated with this sample set.

Quantitation Limits and Data Assessment

VOC

Results were reported which were below the lowest calibration standard level (QL) and above the method detection limit (MDL) in the VOC analyses. These results were qualified by the laboratory (J). These results were qualified as estimated (J) due to uncertainty at the low end of calibration.

Samples were analyzed at a 1:1 dilution.

SVOC

Results were reported which were below the reporting limit (RL) and above the method detection limit (MDL) in the SVOC analyses. These results were qualified as estimated (J) by the laboratory. These results were qualified as estimated (J) due to uncertainty at the low end of calibration.

Samples were analyzed at a 1:1 dilution.

Sample Quantitation and Compound Identification

Calculations were spot-checked; no discrepancies were noted in the VOC and SVOC analyses.

The SVOC Tentatively Identified compounds in samples SP-CSG10E, ethylbenzene, 1,3-dimethylbenzene and p-xylene were rejected (R) these compounds are target compounds for the VOC fraction of the sample.

Starlight Park, Project 013943-3-1102

Project: Starlight Park
Laboratory: Chemtech, Mountainside, NJ
Report No.: Y3671
Reviewer: Lorie MacKinnon/GEI Consultants
Date: October 22, 2007

Samples Reviewed and Evaluation Summary

FIELD ID	LAB ID	FRACTIONS VALIDATED
SP-CSC11W2	Y3671-01	VOC, SVOC
SP-CSC10W2	Y3671-02	VOC
Associated QC Samples:	Field/Trip Blanks:	None associated
	Field Duplicate pair:	None associated

The above-listed soil samples were collected on July 24, 2007 and were analyzed for volatile organic compounds (VOCs) by SW-846 method 8260B and semivolatile organic compounds (SVOCs) by SW-846 method 8270C. The data validation was based on the USEPA Region II Standard Operating Procedure (SOP) for the Validation of Organic Data Acquired using SW-846 Method 8260B, SOP No. HW-24, Revision 1, June 1999 and the USEPA Region II Standard Operating Procedure (SOP) for the Validation of Organic Data Acquired using SW-846 Method 8270C, SOP No. HW-22, Revision 2, June 2001.

The organic data were evaluated based on the following parameters:

*	•	Data Completeness
*	•	Holding Times and Sample Preservation
*	•	Gas Chromatography/Mass Spectrometry (GC/MS) Tunes
	•	Initial and Continuing Calibrations
	•	Blanks
*	•	Surrogate Recoveries
	•	Matrix Spike/Matrix Spike Duplicate (MS/MSD) Results
*	•	Internal Standards
	•	Laboratory Control Sample (LCS) Results
*	•	Moisture Content
NA	•	Field Duplicate Results
	•	Quantitation Limits and Data Assessment
	•	Sample Quantitation and Compound Identification

* - All criteria were met.

NA -- A field duplicate pair was not associated with this sample set.

All results are usable for project objectives.

Qualifications were not applied to the data as a result of sampling error. Qualifications applied to the data as a result of analytical error are discussed below.

- Potential uncertainty exists for select VOC and SVOC results which were below the lowest calibration standard and quantitation limit. The results were qualified as estimated (J) by the laboratory. These results can be used for project objectives as estimated values which may have a minor impact on the data usability.

- The positive results for carbon disulfide in samples SP-CSC11W2 and SP-CSC10W2 were qualified as estimated (J) due to initial calibration nonconformances. The direction of the bias cannot be determined from this nonconformance. The results can be used for project objectives as estimated values which may have a minor impact on the data usability.

- The nondetect results for chloroethane in samples SP-CSC11W2 and SP-CSC10W2 were qualified as estimated (UJ) due to continuing calibration nonconformances. The direction of the bias cannot be determined from this nonconformance. The results can be used for project objectives as nondetects with estimated quantitation limits which may have a minor impact on the data usability.

- The nondetect result for chloroethane in sample SP-CSC11W2 was qualified as estimated (UJ) due to low recoveries in the MS/MSD. The result may be biased low. The result can be used for project objectives as a nondetect with estimated quantitation limit which may have a minor impact on the data usability.

- The nondetect results for chloroethane in samples SP-CSC11W2 and SP-CSC10W2 were qualified as estimated (UJ) due to low recovery in the LCS. The results may be biased low. The results can be used for project objectives as nondetects with estimated quantitation limits which may have a minor impact on the data usability.

The validation findings were based on the following information.

Data Completeness

The data package was complete as defined under the requirements for the NYSDEC ASP category B deliverables for the VOC and SVOC analyses.

Holding Times and Sample Preservation

All holding time and sample preservation criteria were met in the VOC and SVOC analyses.

GC/MS Tunes

All criteria were met in the VOC and SVOC analyses.

Initial and Continuing Calibrations

VOC

Compounds that did not meet criteria in the VOC initial and continuing calibrations are summarized in the following tables.

Instrument ID MSVOAK Compound	IC 07/04/07	CC 07/23/07 12:25	CC 07/25/07 12:10
Bromomethane	X (19.5%)	XX (33.6%)	
Chloroethane	X (55.7%)	XX (63.7%)	XX (33.9%)
Trichlorofluoromethane	X (38.8%)	XX (27.4%)	
Acetone		XX (27.7%)	
1,1.2-Trichlorotrifluoroethane	X (18.5%)		
1,1-Dichloroethene	X (20.2%)		
Carbon disulfide	X (16.9%)	XX (22.6%)	
Methylene chloride		XX (22.8%)	
Methyl tert-butyl ether		XX (23.5%)	
Methyl acetate		XX (26.7%)	
Trans-1,2-dichloroethene		XX (22.1%)	
1,1-dichloroethane		XX (24.8%)	
Cyclohexane		XX (21.6%)	
2-Butanone		XX (23.0%)	
1,2-dichloroethane		XX (23.8%)	
Samples Affected	Low level SP-CSC11W2, SP-CSC10W2	QC samples	Low level SP-CSC11W2, SP-CSC10W2

Instrument ID MSVOAI Compound	CC 07/27/07 00:38
Dichlorodifluoromethane	XX (33.9%)
Acetone	XX (25.5%)
Methylcyclohexane	XX (24.8%)
Tetrachloroethene	XX (22.4%)
1,4-Dichlorobenzene	XX (28.1%)
Samples Affected	Medium Level SP-CSC11W2

X = Initial calibration (IC) relative standard deviation (%RSD) > 15; estimate (J) positive results only.
XX = Continuing calibration (CC) percent difference (%D) > 20; estimate (J/UJ) positive and nondetect results.
XXX = Continuing calibration (CC) percent difference (%D) > 90; estimate (J) positive results and reject (R) nondetect results.
+ = Response factor (RRF) < 0.05; Estimate (J) positive results and reject (R) nondetect results.

The positive results for carbon disulfide in samples SP-CSC11W2 and SP-CSC10W2 were estimated (J) due to initial calibration nonconformances. Validation actions were not required for bromomethane, chloroethane, trichlorofluoromethane, 1,1,2-trichlorotrifluoroethane, and 1,1-dichloroethene due to initial calibration nonconformances as positive results are affected and these results were not detected.

The nondetect results for chloroethane in samples SP-CSC11W2 and SP-CSC10W2 were estimated (UJ) due to continuing calibration nonconformances.

Validation actions were not required for all affected compounds in the medium level analysis of sample SP-CSC11W2 as the affected compounds were not reported from the medium level analysis.

SVOC

Compounds that did not meet criteria in the SVOC continuing calibration are summarized in the following table.

Instrument ID BNAE Compound	CC 07/26/07 17:35
2,4-dinitrophenol	X (36.8%)
Samples Affected	QC samples

X = Initial calibration (IC) relative standard deviation (%RSD) > 15; estimate (J) positive results only.
XX = Continuing calibration (CC) percent difference (%D) > 20; estimate (J/UJ) positive and nondetect results.
XXX = Continuing calibration (CC) percent difference (%D) > 90; estimate (J) positive results and reject (R) nondetect results.
+ = Response factor (RRF) < 0.05; Estimate (J) positive results and reject (R) nondetect results.

Validation actions were not required for 2,4-dinitrophenol due to continuing calibration nonconformances as QC samples only were affected.

Blanks

VOC

Methylene chloride was detected in the method blank associated with the QC samples only in this case. Validation was not required on this basis.

SVOC

Target compounds were not detected in the SVOC method blank sample.

The result for tentatively identified compound (TIC) ACP at retention time (RT) 3.34 was rejected (R) in sample SP-CSC10W2 as this TIC was detected in the associated method blank.

Surrogate Recoveries

All criteria were met in the VOC and SVOC analyses.

MS/MSD Results

VOC

The recoveries for chloroethane (44,52) were outside of control limits in the low level MS/MSD performed on sample SP-CSC11W2. The nondetect result for chloroethane in sample SP-CSC11W2 was estimated (UJ).

SVOC

MS/MSDs were performed on sample SP-CSC11W2. All criteria were met.

Internal Standards

All criteria were met in the VOC and SVOC analyses.

LCS Results

SVOC

All criteria were met in the SVOC analyses.

VOC

The following table lists the compounds recovered outside of control limits in the LCS analyses and the resulting actions.

Compound	Recovery (%)	Control Limits	Associated Samples	Validation Actions
Chloroethane	50, 65	70-130	All low level samples	Estimate (UJ) the nondetect results for chloroethane in samples SP-CSC11W2 and SP-CSC10W2.
Dichlorodifluoromethane Acetone	60, 60 69, 62	70-130	Medium Level SP-CSC11W2	Validation actions were not required on this basis as these analytes were not reported from the medium level analysis.

Moisture Content

All criteria were met.

Field Duplicate Results

A field duplicate pair was not associated with this sample set.

Quantitation Limits and Data Assessment

The following table lists the sample dilutions and analyses which were performed and reported.

Sample	VOC Analysis Reported	SVOC Analysis Reported
SP-CSC11W2	Report results for benzene, m/p-xylenes, and o-xylene from the medium level analysis. Report remaining compounds from low level analysis.	NR

NR- A dilution was not required

VOC

Results were reported which were below the reporting limit (RL) and above the method detection limit (MDL) in the VOC analyses. These results were qualified as estimated (J) by the laboratory.

The VOC analysis used one gram of sample instead of the typical amount of five. Quantitation limits are therefore elevated by a factor of five.

SVOC

Results were reported which were below the reporting limit (RL) and above the method detection limit (MDL) in the SVOC analyses. These results were qualified as estimated (J) by the laboratory.

Sample Quantitation and Compound Identification

Calculations were spot-checked; no discrepancies were noted in the VOC and SVOC analyses.

SVOC

Ethylbenzene, was reported as a tentatively identified compound (TIC) in SVOC sample SP-CSC11W2. As the result was reported as a target compound in the VOC sample, the TIC result was rejected (R).

VOC

Naphthalene, was reported as a tentatively identified compound (TIC) in VOC samples SP-CSC11W2 and SP-CSC10W2. As the results were reported as target compounds in the VOC samples, the TIC results were rejected (R).

Samples Reviewed and Evaluation Summary

FIELD ID	LAB ID	FRACTIONS VALIDATED
SP-CS-H10SW2	Y3625-01	VOC
Associated QC Samples:	Field/Trip Blanks:	None associated
	Field Duplicate pair:	None associated

The above-listed soil sample was collected on July 20, 2007 and was analyzed for volatile organic compounds (VOCs) by SW-846 method 8260B. The data validation was based on the USEPA Region II Standard Operating Procedure (SOP) for the Validation of Organic Data Acquired using SW-846 Method 8260B, SOP No. HW-24, Revision 1, June 1999.

The organic data were evaluated based on the following parameters:

*	• Data Completeness
*	• Holding Times and Sample Preservation
*	• Gas Chromatography/Mass Spectrometry (GC/MS) Tunes
	• Initial and Continuing Calibrations
*	• Blanks
	• Surrogate Recoveries
	• Matrix Spike/Matrix Spike Duplicate (MS/MSD) Results
*	• Internal Standards
*	• Laboratory Control Sample (LCS) Results
*	• Moisture Content
NA	• Field Duplicate Results
	• Quantitation Limits and Data Assessment
	• Sample Quantitation and Compound Identification

* - All criteria were met.

NA – A field duplicate pair was not associated with this sample set.

All results are usable for project objectives. Qualifications were not applied to the data as a result of sampling error.

Qualifications applied to the data as a result of analytical error are discussed below.

- Potential uncertainty exists for select VOC results which were below the lowest calibration standard and quantitation limit. The results were qualified as estimated (J) by the laboratory. These results can be used for project objectives as estimated values which may have a minor impact on the data usability.

- The nondetect results for bromomethane, chloroethane, and trichlorofluoromethane in sample SP-CS-H10SW2 were qualified as estimated (UJ) due to continuing calibration nonconformances. The direction of the bias cannot be determined from this nonconformance. The results can be used for project objectives as nondetects with estimated quantitation limits which may have a minor impact on the data usability.

The validation findings were based on the following information.

Data Completeness

The data package was complete as defined under the requirements for the NY ASP category B deliverables for the VOC analyses.

Holding Times and Sample Preservation

All holding time and sample preservation criteria were met in the VOC analyses.

GC/MS Tunes

All criteria were met in the VOC analyses.

Initial and Continuing Calibrations

Compounds that did not meet criteria in the VOC initial and continuing calibrations are summarized in the following tables.

Instrument ID MSVOAK Compound	IC 07/04/07	CC 07/20/07 11:05
Bromomethane	X (19.5%)	XX (24.0%)
Chloroethane	X (55.7%)	XX (59.6%)
Trichlorofluoromethane	X (38.8%)	XX (50.7%)
1,1,2-Trichlorotrifluoroethane	X (18.5%)	
1,1-Dichloroethene	X (20.2%)	
Carbon disulfide	X (16.9%)	

Instrument ID MSVOAK Compound	IC 07/04/07	CC 07/20/07 11:05
Samples Affected	SP-CS-H10SW2	SP-CS-H10SW2

X = Initial calibration (IC) relative standard deviation (%RSD) > 15; estimate (J) positive results only.
XX = Continuing calibration (CC) percent difference (%D) > 20; estimate (J/UJ) positive and nondetect results.
XXX = Continuing calibration (CC) percent difference (%D) > 90; estimate (J) positive results and reject (R) nondetect results.
+ = Response factor (RRF) < 0.05; Estimate (J) positive results and reject (R) nondetect results.

Validation actions were not required for bromomethane, chloroethane, trichlorofluoromethane, 1,1,2-trichlorotrifluoroethane, 1,1-dichloroethene, and carbon disulfide in sample SP-CS-H10SW2 due to initial calibration nonconformances as positive results are affected and these results were not detected.

The nondetect results for bromomethane, chloroethane, and trichlorofluoromethane in sample SP-CS-H10SW2 were estimated (UJ) due to continuing calibration nonconformances.

Blanks

Target compounds were not detected in the VOC method blank sample.

Surrogate Recoveries

The recoveries for 4-bromofluorobenzene were above the control limits in the batch MS (147) and MSD (167) associated with this sample group. Validation actions were not required on this basis.

MS/MSD Results

The recoveries for chloroethane (44, 52) were outside of control limits in the low level MS/MSD performed on a non-project sample (Y3577-01). Validation action was not required on this basis.

Internal Standards

All criteria were met in the VOC analyses.

LCS Results

All criteria were met in the VOC analyses.

Moisture Content

All criteria were met.

Field Duplicate Results

A field duplicate pair was not associated with this sample group.

Quantitation Limits and Data Assessment

Dilutions were not required.

Results were reported which were below the reporting limit (RL) and above the method detection limit (MDL) in the VOC analyses. These results were qualified as estimated (J) by the laboratory.

The VOC analysis used one gram of sample instead of the typical amount of five. Quantitation limits are therefore elevated by a factor of five.

Sample Quantitation and Compound Identification

Calculations were spot-checked; no discrepancies were noted in the VOC analyses.

Target compound, naphthalene, was reported as a tentatively identified compound (TIC) in VOC sample SP-CSH10SW2. As a SVOC fraction was not analyzed for this sample, the TIC result for naphthalene was not rejected.

Reviewer: Lorie MacKinnon/GEI Consultants
Date: October 29, 2007

Samples Reviewed and Evaluation Summary

FIELD ID	LAB ID	FRACTIONS VALIDATED
SP-CS17	Y3302-01	VOC, SVOC
Associated QC Samples:	Field/Trip Blanks:	None associated
	Field Duplicate pair:	None associated

The above-listed soil sample was collected on June 27, 2007 and was analyzed for volatile organic compounds (VOCs) by SW-846 method 8260B and semivolatile organic compounds (SVOCs) by SW-846 method 8270C. The data validation was based on the USEPA Region II Standard Operating Procedure (SOP) for the Validation of Organic Data Acquired using SW-846 Method 8260B, SOP No. HW-24, Revision 1, June 1999 and the USEPA Region II Standard Operating Procedure (SOP) for the Validation of Organic Data Acquired using SW-846 Method 8270C, SOP No. HW-22, Revision 2, June 2001.

The organic data were evaluated based on the following parameters:

*	•	Data Completeness
*	•	Holding Times and Sample Preservation
*	•	Gas Chromatography/Mass Spectrometry (GC/MS) Tunes
	•	Initial and Continuing Calibrations
	•	Blanks
*	•	Surrogate Recoveries
	•	Matrix Spike/Matrix Spike Duplicate (MS/MSD) Results
*	•	Internal Standards
	•	Laboratory Control Sample (LCS) Results
*	•	Moisture Content
NA	•	Field Duplicate Results
	•	Quantitation Limits and Data Assessment
*	•	Sample Quantitation and Compound Identification

* - All criteria were met.

NA – A field duplicate pair was not associated with this sample set.

All results are usable for project objectives with the exception of hexachlorocyclopentadiene in sample SP-CS17 which was rejected due to recovery less than 10 in the MS/MSD.

Qualifications were not applied to the data as a result of sampling error. Qualifications applied to the data as a result of analytical error are discussed below.

- Potential uncertainty exists for select VOC and SVOC results which were below the lowest calibration standard and quantitation limit. The results were qualified as estimated (J) by the laboratory. These results can be used for project objectives as estimated values which may have a minor impact on the data usability.

- The nondetect results for dichlorodifluoromethane, chloromethane, acetone, trichloroethene, dibromochloromethane, tetrachloroethene, and bromoform in sample SP-CS17 were qualified as estimated (UJ) due to continuing calibration nonconformances. The direction of the bias cannot be determined from these nonconformances. The results can be used for project objectives as nondetects with estimated quantitation limits which may have a minor impact on the data usability.

- The positive results for acenaphthylene, phenanthrene, anthracene, chrysene, indeno(123-cd)pyrene, benzo(ghi)perylene, and benzo(a)pyrene in sample SP-CS17 were qualified as estimated (J) due to high recoveries in the MS/MSD. The results may be biased high. The results can be used for project objectives as estimated values which may have a minor impact on the data usability.

- The positive and nondetect results for acetone, 2,4-dinitrophenol, 4,6-nitro-2-methylphenol, and dibenzo(ah)anthracene in sample SP-CS17 were qualified as estimated (J/UJ) due to low recoveries in the MS/MSD. The results may be biased low. The results can be used for project objectives as estimated values and nondetects with estimated quantitation limits which may have a minor impact on the data usability.

- The nondetect result for hexachlorocyclopentadiene in sample SP-CS17 was rejected (R) due to recoveries less than 10 in the MS/MSD. The results are not usable for project objectives which may have a major impact on the data usability.

- The nondetect result for acetone in sample SP-CS17 was qualified as estimated (UJ) due to low recovery in the LCS. The result may be biased low. The result can be used for project objectives as a nondetect with estimated quantitation limit which may have a minor impact on the data usability.

The validation findings were based on the following information.

Data Completeness

The data package was complete as defined under the requirements for the NYSDEC ASP category B deliverables for the VOC and SVOC analyses.

Holding Times and Sample Preservation

All holding time and sample preservation criteria were met in the VOC and SVOC analyses.

GC/MS Tunes

All criteria were met in the VOC and SVOC analyses.

Initial and Continuing Calibrations

VOC

Compounds that did not meet criteria in the VOC initial and continuing calibrations are summarized in the following tables.

Instrument ID MSVOAE Compound	IC 06/19/07	CC 06/29/07 11:38
Dichlorodifluoromethane	X (27.4%)	XX (20.1%)
Chloromethane	X (17.6%)	XX (21.6%)
Vinyl chloride	X (18.7%)	
Chloroethane	X (17.6%)	
Trichlorofluoromethane	X (20.0%)	
Acetone	X (22.5%)	XX (38.8%)
Trichloroethene		XX (21.1%)
Dibromochloromethane		XX (20.7%)
Tetrachloroethene		XX (29.4%)
Bromoform		XX (21.4%)
Samples Affected	SP-CS17	SP-CS17

X = Initial calibration (IC) relative standard deviation (%RSD) > 15; estimate (J) positive results only.
XX = Continuing calibration (CC) percent difference (%D) > 20; estimate (J/UJ) positive and nondetect results.
XXX = Continuing calibration (CC) percent difference (%D) > 90; estimate (J) positive results and reject (R) nondetect results.
+ = Response factor (RRF) < 0.05; Estimate (J) positive results and reject (R) nondetect results.

Validation actions were not required for dichlorodifluoromethane, chloromethane, vinyl chloride, chloroethane, trichlorofluoromethane, and acetone due to initial calibration nonconformances as positive results are affected and these results were not detected.

The nondetect results for dichlorodifluoromethane, chloromethane, acetone, trichloroethene, dibromochloromethane, tetrachloroethene, and bromoform in sample SP-CS17 were estimated (UJ) due to continuing calibration nonconformances.

SVOC

All criteria were met.

Blanks

SVOC

Target compounds were not detected in the SVOC method blank sample.

The result for tentatively identified compound (TIC) ACP at retention time (RT) 2.79 was rejected (R) in sample SP-CS17.

VOC

Target compounds were not detected in the VOC method blank sample.

Surrogate Recoveries

All criteria were met in the VOC and SVOC analyses.

MS/MSD Results

VOC

MS/MSD analyses were performed on sample SP-CS17. The recovery for acetone (MS 40) and relative percent difference (RPD) for acetone (35) were outside of control limits. The nondetect result for acetone was estimated (UJ) in sample SP-CS17.

SVOC

MS/MSD analyses were performed on sample SP-CS17. The following table lists the compounds recovered outside of control limits in the SVOC analyses and the resulting validation actions.

Compound	Recovery (%)	RPD (%)	Control Limits	Validation Actions
4-chloro-3-methylphenol 2-nitroaniline	MS 104 MS 113	- -	60-100/50 52-110/50	Validation action was not required; the results for 4-chloro-3-methylphenol and 2-nitroaniline were nondetect and therefore not affected by the potential high bias.
Hexachlorocyclopentadiene	6, 6	-	20-107/50	Reject (R) the nondetect result for hexachlorocyclopentadiene in sample SP-CS17.
Acenaphthylene	139, 139	-	52-107/50	Estimate (J) the positive results for acenaphthylene, phenanthrene, anthracene, chrysene, indeno(123-cd)pyrene, benzo(ghi)perylene, and benzo(a)pyrene in sample SP-CS17.
Phenanthrene	MS 170	-	20-150/50	
Anthracene	130, 122	-	54-108/50	
Chrysene	148, 148	-	51-115/50	
Indeno(123-cd)pyrene	174, 157	-	42-124/50	
Benzo(ghi)perylene	148, 139	-	39-130/50	
Benzo(a)pyrene	191, 148	-	58-102/50	
2,4-Dinitrophenol	13, 12	-	26-131/50	Estimate (UJ) the nondetect results for 2,4-dinitrophenol and 4,6-dinitro-2-methylphenol and the positive result for dibenzo(ah)anthracene in sample SP-CS17.
4,6-Dinitro-2-methylphenol	24, 18	-	40-105/50	
Dibenz(ah)anthracene	17, 6	96	41-130/50	

Internal Standards

All criteria were met in the VOC and SVOC analyses.

LCS Results

SVOC

All criteria were met in the SVOC analyses.

VOC

The following table lists the compounds recovered outside of control limits in the LCS analyses and the resulting actions.

Compound	Recovery (%)	Control Limits	Associated Samples	Validation Actions
Acetone	63	70-130	All low level samples	Estimate (UJ) the nondetect result for acetone in sample SP-CS17.

Moisture Content

All criteria were met.

Field Duplicate Results

A field duplicate pair was not associated with this sample set.

Quantitation Limits and Data Assessment

The following table lists the sample dilutions and analyses which were performed and reported.

Sample	VOC Analysis Reported	SVOC Analysis Reported
SP-CS17	One gram of sample was used instead of typical five grams. QLs were elevated by a factor of five.	Report results for fluoranthene and pyrene from the 10-fold dilution. Report remaining compounds from 5-fold dilution analysis.

Results were reported which were below the reporting limit (RL) and above the method detection limit (MDL) in the VOC and SVOC analyses. These results were qualified as estimated (J) by the laboratory.

Sample Quantitation and Compound Identification

Calculations were spot-checked; no discrepancies were noted in the VOC and SVOC analyses.

Date: October 11, 2007

Samples Reviewed and Evaluation Summary

FIELD ID	LAB ID	FRACTIONS VALIDATED
SP-CSC10S	Y3443-01	VOC, SVOC
Associated QC Samples:	Field/Trip Blanks:	None associated
	Field Duplicate pair:	None associated

The above-listed soil sample was collected on July 10, 2007 and was analyzed for volatile organic compounds (VOCs) by SW-846 method 8260B and semivolatile organic compounds (SVOCs) by SW-846 method 8270C. The data validation was based on the USEPA Region II Standard Operating Procedure (SOP) for the Validation of Organic Data Acquired using SW-846 Method 8260B, SOP No. HW-24, Revision 1, June 1999 and the USEPA Region II Standard Operating Procedure (SOP) for the Validation of Organic Data Acquired using SW-846 Method 8270C, SOP No. HW-22, Revision 2, June 2001.

The organic data were evaluated based on the following parameters:

*	•	Data Completeness
*	•	Holding Times and Sample Preservation
*	•	Gas Chromatography/Mass Spectrometry (GC/MS) Tunes
	•	Initial and Continuing Calibrations
	•	Blanks
*	•	Surrogate Recoveries
	•	Matrix Spike/Matrix Spike Duplicate (MS/MSD) Results
*	•	Internal Standards
	•	Laboratory Control Sample (LCS) Results
*	•	Moisture Content
NA	•	Field Duplicate Results
	•	Quantitation Limits and Data Assessment
*	•	Sample Quantitation and Compound Identification

* - All criteria were met.

NA -- A field duplicate pair was not associated with this sample set.

All results are usable for project objectives.

Qualifications were not applied to the data as a result of sampling error. Qualifications applied to the data as a result of analytical error are discussed below.

- Potential uncertainty exists for select VOC and SVOC results which were below the lowest calibration standard and quantitation limit. The results were qualified as estimated (J) by the laboratory. These results can be used for project objectives as estimated values which may have a minor impact on the data usability.

- The nondetect result for trichlorofluoromethane in sample SP-CSC10S was qualified as estimated (UJ) due to continuing calibration nonconformances. The direction of the bias cannot be determined from this nonconformance. The result can be used for project objectives as a nondetect with an estimated quantitation limit which may have a minor impact on the data usability.

- The nondetect results for dichlorodifluoromethane, chloromethane, vinyl chloride, chloroethene, trichlorofluoromethane, and 3,3'-dichlorobenzidine in sample SP-CSC10S were qualified as estimated (UJ) due to low recoveries in the LCS. The results may be biased low. The results can be used for project objectives as nondetects with estimated quantitation limits which may have a minor impact on the data usability.

- The nondetect results for 2,4-dinitrophenol, 4,6-dinitro-2-methylphenol, and hexachlorocyclopentadiene were qualified as estimated (UJ) in sample SP-CSC10S due to low recoveries in the MS and/or MSD. The results may be biased low. The results can be used for project objectives as nondetects with estimated quantitation limits which may have a minor impact on the data usability.

The validation findings were based on the following information.

Data Completeness

The data package was complete as defined under the requirements for the NYSDEC ASP category B deliverables for the VOC and SVOC analyses.

Holding Times and Sample Preservation

All holding time and sample preservation criteria were met in the VOC and SVOC analyses.

GC/MS Tunes

All criteria were met in the VOC and SVOC analyses.

Initial and Continuing Calibrations

VOC

Compounds that did not meet criteria in the VOC initial and continuing calibrations are summarized in the following tables.

Instrument ID MSVOAI Compound	IC 07/09/07	CC 07/11/07 13:57
Chloromethane	X (16.7%)	
Bromomethane	X (17.8%)	
Chloroethane	X (42.0%)	
Trichlorofluoromethane	X (33.9%)	XX (27.0%)
Samples Affected	SP-CSC10S	SP-CSC10S

X = Initial calibration (IC) relative standard deviation (%RSD) > 15; estimate (J) positive results only.
XX = Continuing calibration (CC) percent difference (%D) > 20; estimate (J/UJ) positive and nondetect results.
XXX = Continuing calibration (CC) percent difference (%D) > 90; estimate (J) positive results and reject (R) nondetect results.
+ = Response factor (RRF) < 0.05; Estimate (J) positive results and reject (R) nondetect results.

Validation actions were not required for chloromethane, bromomethane, chloroethane, and trichlorofluoromethane in sample SP-CSC10S due to initial calibration nonconformances as positive results only are affected and these results were not detected.

The nondetect result for trichlorofluoromethane in sample SP-CSC10S was estimated (UJ) due to continuing calibration nonconformances.

Blanks

SVOC

Target compounds were not detected in the SVOC method blank sample.

The result for tentatively identified compound (TIC) ACP at retention time (RT) 3.53 was rejected (R) in sample SP-CSC10S as the TIC was detected in the associated method blank.

VOC

Target compounds were not detected in the VOC method blank sample.

Surrogate Recoveries

All criteria were met in the VOC and SVOC analyses.

MS/MSD Results

VOC

The recoveries for chloroethane (45, 40), trichlorofluoromethane (40, 37), 1,1,2-trichlorotrifluoroethane (77, 59), 1,1-dichloroethene (70, 64), bromomethane (MSD 48), and acetone (MSD 45) and the relative percent differences (RPDs) for 1,1,2-trichlorotrifluoroethane (26), bromomethane (37), and acetone (35) were outside of control limits in the reported MS/MSD performed on a non-project sample (Y3247-04). Validation action was not required on this basis.

SVOC

MS/MSDs were performed on sample SP-CSC10S. The recoveries for 2,4-dinitrophenol (25, 25), 4,6-dinitro-2-methylphenol (33, 29), and hexachlorocyclopentadiene (MSD 17) were recovered below the control limits in the MS and/or MSD. The nondetect results for 2,4-dinitrophenol, 4,6-dinitro-2-methylphenol, and hexachlorocyclopentadiene were estimated (UJ) in sample SP-CSC10S. The recoveries for benzo(a)anthracene, indeno(123-cd)pyrene, and benzo(a)pyrene were above control limits in the MSD but as levels were greater than four times the spike level, validation actions were not required.

Internal Standards

All criteria were met in the VOC and SVOC analyses.

LCS Results

The following table lists the compounds recovered outside of control limits in the LCS VOC and SVOC analyses and the resulting actions.

Compound	Recovery (%)	Control Limits	Associated Samples	Validation Actions
Tetrachloroethene	LCS 145	70-130	SP-CSC10S	Validation action was not required as the result for tetrachloroethene was nondetect in sample SP-CSC10S and therefore not affected by the potential high bias.
Dichlorodifluoromethane Chloromethane Vinyl chloride Chloroethene Trichlorofluoromethane	43, 38 55, 50 46, 43 65, 60 55, 55	70-130	SP-CSC10S	Estimate (UJ) the nondetect results for dichlorodifluoromethane, chloromethane, vinyl chloride, chloroethene, and trichlorofluoromethane in sample SP-CSC10S.
3,3'-dichlorobenzidine	29	31-111	SP-CSC10S	Estimate (UJ) the nondetect result for 3,3'-dichlorobenzidine in sample SP-CSC10S.

Moisture Content

All criteria were met.

Field Duplicate Results

A field duplicate pair was not associated with this sample group.

Quantitation Limits and Data Assessment

The following table lists the sample dilutions and analyses which were performed and reported.

Sample	VOC Analysis Reported	SVOC Analysis Reported
SP-CSC10S	A medium level analysis was performed (4 grams/5 ml) and a subsequent 100-fold dilution was performed. The QLs were elevated 125-fold.	Report results for phenanthrene, fluoranthene, pyrene, benzo(a)anthracene, chrysene, benzo(b)fluoranthene, and benzo(a)pyrene from the 5-fold dilution. Report remaining compounds from undiluted analysis.

NR- A dilution was not required

Results were reported which were below the reporting limit (RL) and above the method detection limit (MDL) in the VOC and SVOC analyses. These results were qualified as estimated (J) by the laboratory.

Sample Quantitation and Compound Identification

Calculations were spot-checked; no discrepancies were noted in the VOC and SVOC analyses.

Project: Starlight Park
Laboratory: Test America, Shelton, CT
Report No.: 220-2944-1
Reviewer: Lisa McDonagh/GEI Consultants
Date: November 9, 2007

Samples Reviewed and Evaluation Summary

FIELD ID	LAB ID	FRACTIONS VALIDATED
SP-CSF12	220-2944-1	VOC, SVOC
SP-CSG12E	220-2944-2	VOC, SVOC
SP-CSF13S	220-2944-3	VOC, SVOC
Associated QC Samples:	Field/Trip Blanks:	None associated
	Field Duplicate pair:	None associated

The above-listed soil samples were collected on October 2, 2007 and were analyzed for volatile organic compounds (VOCs) by SW-846 method 8260B and semivolatile organic compounds (SVOCs) by SW-846 method 8270C. The data validation was based on the USEPA Region II Standard Operating Procedure (SOP) for the Validation of Organic Data Acquired using SW-846 Method 8260B, SOP No. HW-24, Revision 1, June 1999 and the USEPA Region II Standard Operating Procedure (SOP) for the Validation of Organic Data Acquired using SW-846 Method 8270C, SOP No. HW-22, Revision 2, June 2001.

The organic data were evaluated based on the following parameters:

*	•	Data Completeness
*	•	Holding Times and Sample Preservation
*	•	Gas Chromatography/Mass Spectrometry (GC/MS) Tunes
	•	Initial and Continuing Calibrations
	•	Blanks
*	•	Surrogate Recoveries
NA	•	Matrix Spike/Matrix Spike Duplicate (MS/MSD) Results
*	•	Internal Standards
	•	Laboratory Control Sample (LCS) Results
*	•	Moisture Content
NA	•	Field Duplicate Results
	•	Quantitation Limits and Data Assessment
*	•	Sample Quantitation and Compound Identification

* - All criteria were met.

NA – A field duplicate pair was not associated with this sample set.

All results are usable for project objectives.

Qualifications were not applied to the data as a result of sampling error.
Qualifications applied to the data as a result of analytical error are discussed below.

- Potential uncertainty exists for select VOC and SVOC results, which were below the lowest calibration standard and quantitation limit. The results were qualified as estimated (J) by the laboratory. These results can be used for project objectives as estimated values, which may have a minor impact on the data usability.

- The VOC positive result for acetone and methylene chloride in all samples 220-2944-1 were qualified as a nondetect (U) at the quantitation limit (QL) due to laboratory blank contamination. The results are still usable for project objectives as nondetects. These qualifications may have a minor impact on the data usability.

- The SVOC positive and/or nondetect results for bis(2-chloroethyl)ether and indeno(1,2,3-cd)pyrene in samples SP-CSF12 and SP-CSF13S were qualified as estimated (J/UJ) due to calibration nonconformances. The direction of the bias cannot be determined from these nonconformances. The results can be used for project objectives as estimated quantitation limits, which may have a minor impact on the data usability

The validation findings were based on the following information.

Data Completeness

The data package was complete as defined under the requirements for the CLP-like deliverables for the VOC and SVOC analyses.

Holding Times and Sample Preservation

All holding time and sample preservation criteria were met in the VOC and SVOC analyses.

GC/MS Tunes

All criteria were met in the VOC and SVOC analyses.

Initial and Continuing Calibrations

VOC

Compounds that did not meet criteria in the VOC initial and continuing calibrations are summarized in the following table.

Instrument ID MSN Compound	IC 08/14/07
2-butanone	X(24.1%)
acetone	X(23.8%)
bromoform	X(22.3%)
chlorodibromomethane	X(15.5%)
Samples Affected	All samples 220-2944-1

Qualifications were not required.

SVOC

Compounds that did not meet criteria in the SVOC initial and continuing calibrations are summarized in the following table.

Instrument ID MSZ Compound	IC 09/20/07	CC 10/03/07
bis(2-chloroethyl)ether		XX(31.8%)
Indeno(1,2,3-cd)pyrene		XX(29.1%)
Samples Affected		SP-CSF12 SP-CSF13S

X = Initial calibration (IC) relative standard deviation (%RSD) > 15; estimate (J) positive results only.
XX = Continuing calibration (CC) percent difference (%D) > 20; estimate (J/UJ) positive and nondetect results.
XXX = Continuing calibration (CC) percent difference (%D) > 90; estimate (J) positive results and reject (R) nondetect results.
+ = Response factor (RRF) < 0.05; Estimate (J) positive results and reject (R) nondetect results.

The SVOC positive and/or nondetect results for bis(2-chloroethyl)ether and indeno(1,2,3-cd)pyrene in samples SP-CSF12 and SP-CSF13S were qualified as estimated (J/UJ) due to calibration nonconformances.

Blanks

VOC

Acetone and methylene chloride were detected in the VOC method blank. The presence of blank contamination indicates that false positives may exist for this compound in the associated samples. Action Levels (ALs) were established at 10x (for common contaminants) and 5x (for other compounds) the concentrations detected. The following table summarizes the AL.

Compound	Type of Blank	Associated Samples	Maximum Concentration	Action Level
acetone	Method	SP-CSF12 SP-CSG12E	20 ug/kg	200 ug/kg
methylene chloride		SP-CSF13S	3.4 ug/kg	34 ug/kg

Sample results were qualified as follows:

- If sample concentration was < the quantitation limit (QL) and ≤ the Action Level, qualify the result as a nondetect (U) at the QL.
- If sample concentration was > the QL and ≤ the Action Level, qualify the result as not detected (U) at the reported concentration.
- If the sample concentration was > the QL and > the Action Level, qualification of the data was not required.

The VOC positive result for acetone and methylene chloride in samples SP-CSF12, SP-CSG12E and SP-CSF13S were qualified as a nondetect (U) at the quantitation limit (QL) due to laboratory blank contamination.

SVOC

All criteria were met in the SVOC samples.

Surrogate Recoveries

VOC

All criteria were met in the VOC samples.

SVOC

All criteria were met in the SVOC samples.

MS/MSD Results

VOC and SVOC

MS/MSD samples were not submitted with this sample group.

Internal Standards

VOC

All criteria were met in the VOC samples.

SVOC

All criteria were met in the SVOC samples.

LCS Results

VOC:

All criteria were met in the VOC samples.

SVOC:

The following table lists the compounds recovered outside of the LCS analyses and the resulting actions.

Compound	Recovery (%)	Control Limits	Validation Actions
bis(2-chloroethyl)ether	108	43-106	Validation actions were not required as the results were nondetect and therefore not affected by the potential high bias.
2,4-dinitrophenol	89	0-36	
4,6-dinitro-2-methylphenol	100	0-89	

Moisture Content

All criteria were met for the sample in this data package.

Field Duplicate Results

A field duplicate pair was not associated with this sample set.

Associated QC Samples:	Field/Trip Blanks:	None associated
	Field Duplicate pair:	None associated

The above-listed soil samples were collected on October 1, 2007 and were analyzed for volatile organic compounds (VOCs) by SW-846 method 8260B and semivolatile organic compounds (SVOCs) by SW-846 method 8270C. The data validation was based on the USEPA Region II Standard Operating Procedure (SOP) for the Validation of Organic Data Acquired using SW-846 Method 8260B, SOP No. HW-24, Revision 1, June 1999 and the USEPA Region II Standard Operating Procedure (SOP) for the Validation of Organic Data Acquired using SW-846 Method 8270C, SOP No. HW-22, Revision 2, June 2001.

The organic data were evaluated based on the following parameters:

*	•	Data Completeness
*	•	Holding Times and Sample Preservation
*	•	Gas Chromatography/Mass Spectrometry (GC/MS) Tunes
	•	Initial and Continuing Calibrations
	•	Blanks
*	•	Surrogate Recoveries
NA	•	Matrix Spike/Matrix Spike Duplicate (MS/MSD) Results
	•	Internal Standards

	•	Laboratory Control Sample (LCS) Results
*	•	Moisture Content
NA	•	Field Duplicate Results
	•	Quantitation Limits and Data Assessment
*	•	Sample Quantitation and Compound Identification

* - All criteria were met.

NA – A field duplicate pair was not associated with this sample set.

All results are usable for project objectives.

Qualifications were not applied to the data as a result of sampling error.
Qualifications applied to the data as a result of analytical error are discussed below.

- Potential uncertainty exists for select VOC and SVOC results, which were below the lowest calibration standard and quantitation limit. The results were qualified as estimated (J) by the laboratory. These results can be used for project objectives as estimated values, which may have a minor impact on the data usability.

- The VOC positive result for acetone in all samples 220-2929-1, methylene chloride in samples SP-CSE13S, SP-CSE13N, SP-CSC13N, SP-CSC13, SP-CSD14N, SP- CSD14, SP-CSE13NSW, SP-CSG13SE, SP-CSF13SW, SP-CSD13N and SP-CSG13NE2 were qualified as a nondetect (U) at the quantitation limit (QL) due to laboratory blank contamination. The results are still usable for project objectives as nondetects. These qualifications may have a minor impact on the data usability.

- The VOC positive result for methylene chloride in sample SP-CSF13N was qualified as a nondetect (U) at the reported concentration due to laboratory blank contamination. The results are still usable for project objectives as nondetects. The qualification may have a minor impact on the data usability.

- The SVOC positive results for the compounds benzo(b)fluoranthene, benzo(k)fluoranthene, benzo(a)pyrene, indeno(1,2,3-cd)pyrene, dibenz(a,h)anthracene and benzo(g,h,i)perylene associated with the internal standard Perylene-d12 in sample SP-CSC13 were qualified as estimated (J) due to high recovery of the internal recovery. The positive results can be used for project objectives as estimated values. These qualifications may have a minor impact on the data usability.

The validation findings were based on the following information.

Data Completeness

The data package was complete as defined under the requirements for the CLP-like deliverables for the VOC and SVOC analyses.

Holding Times and Sample Preservation

All holding time and sample preservation criteria were met in the VOC and SVOC analyses.

GC/MS Tunes

All criteria were met in the VOC and SVOC analyses.

Initial and Continuing Calibrations

VOC

Compounds that did not meet criteria in the VOC initial and continuing calibrations are summarized in the following table.

Instrument ID MSN Compound	IC 10/2/07-10/3/07
acetone	X(23.8%)
bromoform	X(22.3%)
chlorodibromomethane	X(15.5%)
Samples Affected	All samples 220-2929-1.

X = Initial calibration (IC) relative standard deviation (%RSD) > 15; estimate (J) positive results only.
XX = Continuing calibration (CC) percent difference (%D) > 20; estimate (J/UJ) positive and nondetect results.
XXX = Continuing calibration (CC) percent difference (%D) > 90; estimate (J) positive results and reject (R) nondetect results.
+ = Response factor (RRF) < 0.05; Estimate (J) positive results and reject (R) nondetect results.

Qualifications were not required.

SVOC

Compounds that did not meet criteria in the SVOC initial and continuing calibrations are summarized in the following table.

Instrument ID MSA Compound	IC 10/3/07
benzyl alcohol	X(15.2%)
nitrobenzene	X(15.6%)
hexachlorocyclopentadiene	X(15.1%)
Samples Affected	SP-CSE13N SP-CSF13SW SP-CSD13N

X = Initial calibration (IC) relative standard deviation (%RSD) > 15; estimate (J) positive results only.
XX = Continuing calibration (CC) percent difference (%D) > 20; estimate (J/UJ) positive and nondetect results.
XXX = Continuing calibration (CC) percent difference (%D) > 90; estimate (J) positive results and reject (R) nondetect results.
+ = Response factor (RRF) < 0.05; Estimate (J) positive results and reject (R) nondetect results.

Qualifications were not required.

Blanks

VOC

Acetone and methylene chloride were detected in the VOC method blank. The presence of blank contamination indicates that false positives may exist for this compound in the associated samples. Action Levels (ALs) were established at 10x (for common contaminants) and 5x (for other compounds) the concentrations detected. The following table summarizes the AL.

Compound	Type of Blank	Associated Samples	Maximum Concentration	Action Level
acetone	Method	SP-CSE13S SP-CSE13N	20 ug/kg	200 ug/kg
methylene chloride		SP-CSF13N SP-CSC13N SP-CSC13 SP-CSD14N SP-CSD14 SP-CSE13NSW SP-CSG13SE SP-CSF13SW SP-CSD13N SP-CSG13NE2	3.4 ug/kg	34 ug/kg

Sample results were qualified as follows:

- If sample concentration was < the quantitation limit (QL) and ≤ the Action Level, qualify the result as a

nondetect (U) at the QL.
- If sample concentration was > the QL and ≤ the Action Level, qualify the result as not detected (U) at the reported concentration.
- If the sample concentration was > the QL and > the Action Level, qualification of the data was not required.

The VOC positive result for acetone in all samples 220-2929-1, methylene chloride in samples SP-CSE13S, SP-CSE13N, SP-CSC13N, SP-CSC13, SP-CSD14N, SP-CSD14, SP-CSE13NSW, SP-CSG13SE, SP-CSF13SW, SP-CSD13N and SP-CSG13NE2 were qualified as a nondetect (U) at the quantitation limit (QL) due to laboratory blank contamination.

The VOC positive result for methylene chloride in sample SP-CSF13N was qualified as a nondetect (U) at the reported concentration due to laboratory blank contamination.

SVOC

All criteria were met in the SVOC samples.

Surrogate Recoveries

VOC

All criteria were met in the VOC samples.

SVOC

All criteria were met in the SVOC samples.

MS/MSD Results

VOC and SVOC

MS/MSD samples were not submitted with this sample group.

Internal Standards

VOC

All criteria were met in the VOC samples.

SVOC

The following table lists the internal standards recovered outside of control limits in the SVOC analyses and the resulting validation actions.

Sample	Internal Standard	Recovery (%)	Validation Actions
SP-CSC13	Perylene-d12	215	Estimate (J) the positive results for benzo(b)fluoranthene, benzo(k)fluoranthene, benzo(a)pyrene, indeno(123-cd)pyrene, dibenz(a,h)anthracene and benzo(ghi)perylene.

LCS Results

VOC:

All criteria were met in the VOC samples.

SVOC:

The following table lists the compounds recovered outside of the LCS analyses and the resulting actions.

Compound	Recovery (%)	Control Limits	Validation Actions
2,4-dinitrophenol	61	0-36	Validation actions were not required as the results were nondetect and therefore not affected by the potential high bias.

Moisture Content

All criteria were met for the sample in this data package.

Field Duplicate Results

A field duplicate pair was not associated with this sample set.

Quantitation Limits and Data Assessment

VOC and SVOC

Results were reported which were below the lowest calibration standard level (RL) and above the method detection limit (MDL) in the VOC and SVOC analyses. These results were qualified by the laboratory (J). These results were qualified as estimated (J) due to uncertainty at the low

end of calibration. Several compound results were above the lowest calibration standard therefore the J qualifiers were removed by the validator.

SVOC sample SP-CSE13S (10-fold), SVOC sample SP-CSE13N (2-fold), SVOC sample SP-CSF13N (4-fold), SVOC sample SP-CSE13NSW (5-fold), SVOC sample SP-CSF13SW (2-fold), SVOC sample SP-CSD13N (10-fold) and SVOC sample SP-CSG13NE2 (4-fold) were analyzed on dilution due to high target compound levels. The quantitation levels were elevated in these samples.

All other SVOC samples were analyzed at a 1:1 dilution.

All VOC samples were analyzed at a 1:1 dilution.

Sample Quantitation and Compound Identification

Calculations were spot-checked; no discrepancies were noted in the VOC and SVOC analyses.

Samples Reviewed and Evaluation Summary

FIELD ID	LAB ID	FRACTIONS VALIDATED
SP-CSH13	220-2872-1	VOC, SVOC
SP-CSH12	220-2872-2	VOC, SVOC
SP-CSG13SW	220-2872-3	VOC, SVOC
SP-CSG12W	220-2872-4	VOC, SVOC

Associated QC Samples:	Field/Trip Blanks:	None associated
	Field Duplicate pair:	None associated

The above-listed soil samples were collected on September 27, 2007 and were analyzed for volatile organic compounds (VOCs) by SW-846 method 8260B and semivolatile organic compounds (SVOCs) by SW-846 method 8270C. The data validation was based on the USEPA Region II Standard Operating Procedure (SOP) for the Validation of Organic Data Acquired using SW-846 Method 8260B, SOP No. HW-24, Revision 1, June 1999 and the USEPA Region II Standard Operating Procedure (SOP) for the Validation of Organic Data Acquired using SW-846 Method 8270C, SOP No. HW-22, Revision 2, June 2001.

The organic data were evaluated based on the following parameters:

*	•	Data Completeness
*	•	Holding Times and Sample Preservation
*	•	Gas Chromatography/Mass Spectrometry (GC/MS) Tunes
	•	Initial and Continuing Calibrations
	•	Blanks
*	•	Surrogate Recoveries
	•	Matrix Spike/Matrix Spike Duplicate (MS/MSD) Results
*	•	Internal Standards
	•	Laboratory Control Sample (LCS) Results
*	•	Moisture Content
NA	•	Field Duplicate Results
	•	Quantitation Limits and Data Assessment
*	•	Sample Quantitation and Compound Identification

* - All criteria were met.

NA – A field duplicate pair was not associated with this sample set.

All results are usable for project objectives.

Qualifications were not applied to the data as a result of sampling error.
Qualifications applied to the data as a result of analytical error are discussed below.

- Potential uncertainty exists for select VOC results, which were below the lowest calibration standard and quantitation limit. The results were qualified as estimated (J) by the laboratory. These results can be used for project objectives as estimated values, which may have a minor impact on the data usability.

- The VOC positive result for methylene chloride in samples SP-CSH13, SP-CSH12, SP-CSG13SW and SP-CSG12W were qualified as a nondetect (U) at the quantitation limit (QL) due to laboratory blank contamination. The results are still usable for project objectives as nondetects. These qualifications may have a minor impact on the data usability.

- The VOC positive result for acetone in samples SP-CSH13, SP-CSH12, SP-CSG13SW and SP-CSG12W were qualified as a nondetect (U) at the reported concentration due to laboratory blank contamination. The results are still usable for project objectives as nondetects. These qualifications may have a minor impact on the data usability.

- The VOC nondetect results for acetone in samples SP-CSH13, SP-CSH12, SP-CSG13SW and SP-CSG12W were qualified as estimated (UJ) due to calibration nonconformances. The direction of the bias cannot be determined from these nonconformances. The results can be used for project objectives as estimated quantitation limits, which may have a minor impact on the data usability.

- The VOC positive and/or nondetect results were qualified as estimated (J/UJ) due to MS/MSD recoveries and/or %RPDs which were outside control limits: phenol, 2-chlorophenol, 2,2'-oxybis(1-chloropropane), nitrobenzene, isophorone, 2,4-dimethyphenol, bis(2-chloroethoxy)methane, 2,4-dichlorophenol, naphthalene, 2,4,5-trichlorophenol, 2-chloronaphthalene, 2-nitroaniline, acenaphthylene, dimethylphthalate, 2,6-dinitrotoluene, acenaphthene, dibenzofuran, 2,4-dinitrotoluene, fluorene, 4-chlorophenyl phenyl ether, diethylphthalate, 4-nitroaniline, n-nitrosodiphenylamine, 4-bromophenyl phenyl ether, hexachlorobenzene, phenanthrene, carbazole, anthracene, di-n-butyl phthalate, fluoranthene, pyrene, benzo(a)anthracene, chrysene, benzo(b)fluoranthene, benzo(k)fluoranthene and benzo(a)pyrene in sample SP-CSG12W. The results may be biased low. The positive results can be used for project objectives as estimated values and nondetects with estimated quantitation limits, which may have a minor impact on the data usability.

The validation findings were based on the following information.

Data Completeness

The data package was complete as defined under the requirements for the CLP-like deliverables for the VOC and SVOC analyses.

Holding Times and Sample Preservation

All holding time and sample preservation criteria were met in the VOC and SVOC analyses.

GC/MS Tunes

All criteria were met in the VOC and SVOC analyses.

Initial and Continuing Calibrations

VOC

Compounds that did not meet criteria in the VOC initial and continuing calibrations are summarized in the following table.

Instrument ID MSN Compound	IC 08/14/07	CC 09/27/07
acetone	X(27.4%)	XX(39.5%)
2-butanone	X(15.9%)	
Samples Affected	All samples 220-2872-1	SP-CSH13 SP-CSH12 SP-CSG13SW SP-CSG12W

X = Initial calibration (IC) relative standard deviation (%RSD) > 15; estimate (J) positive results only.
XX = Continuing calibration (CC) percent difference (%D) > 20; estimate (J/UJ) positive and nondetect results.
XXX = Continuing calibration (CC) percent difference (%D) > 90; estimate (J) positive results and reject (R) nondetect results.
+ = Response factor (RRF) < 0.05; Estimate (J) positive results and reject (R) nondetect results.

The VOC nondetect results for acetone in samples SP-CSH13, SP-CSH12, SP-CSG13SW and SP-CSG12W were qualified as estimated (UJ) due to calibration nonconformances.

SVOC

All criteria were met in the SVOC analyses.

Blanks

VOC

Acetone and methylene chloride were detected in the VOC method blank. The presence of blank contamination indicates that false positives may exist for this compound in the associated samples. Action Levels (ALs) were established at 10x (for common contaminants) and 5x (for other compounds) the concentrations detected. The following table summarizes the ALs.

Compound	Type of Blank	Associated Samples	Maximum Concentration	Action Level
acetone	Method	SP-CSH13	24 ug/kg	240 ug/kg
methylene chloride		SP-CSH12	1.5 ug/kg	15 ug/kg
		SP-CSG13SW		
		SP-CSG12W		

Sample results were qualified as follows:

- If sample concentration was < the quantitation limit (QL) and ≤ the Action Level, qualify the result as a nondetect (U) at the QL.
- If sample concentration was > the QL and ≤ the Action Level, qualify the result as not detected (U) at the reported concentration.
- If the sample concentration was > the QL and > the Action Level, qualification of the data was not required.

The VOC positive result for acetone in samples samples SP-CSH13, SP-CSH12, SP-CSG13SW and SP-CSG12W were qualified as a nondetect (U) at the reported concentration due to laboratory blank contamination.

The VOC positive result for methylene chloride in samples SP-CSH13, SP-CSH12, SP-CSG13SW and SP-CSG12W were qualified as a nondetect (U) at the quantitation limit (QL) due to laboratory blank contamination.

SVOC

All criteria were met in the SVOC samples.

Surrogate Recoveries

VOC

All criteria were met in the VOC samples.

SVOC

All criteria were met in the SVOC samples.

MS/MSD Results

VOC

An MS/MSD was performed on sample SP-CSH13 for the VOC analyses. All criteria were met in the VOC analyses.

SVOC

An MS/MSD was performed on sample SP-CSG12W for the SVOC analyses. The following table lists the SVOC MS/MSD recoveries and/or %RPDs which were outside of the laboratory established control limits.

Compound	MS/MSD %R	RPD %	QC Limits	Validation Action
phenol	45/-	-	46-110	Estimate (UJ) the positive result for phenol in sample SP-CSG12W.
2-chlorophenol	43/-	-	46-110	Estimate (UJ) the nondetect result for 2-chlorophenol in sample SP-CSG12W.
2,2-oxybis(1-chloropropane)	42/-	-	45-115	Estimate (UJ) the nondetect result for 2,2-oxybis(1-chloropropane) in sample SP-CSG12W.
nitrobenzene	41/-	-	45-108	Estimate (UJ) the nondetect result for nitrobenzene in sample SP-CSG12W.
isophorone	43/-	-	48-109	Estimate (UJ) the nondetect result for isophorone in sample SP-CSG12W.
2,4-dimethylphenol	34/-	-	36-114	Estimate (UJ) the nondetect result for 2,4-dimethylphenol in sample SP-CSG12W.
bis(2-chloroethoxy)methane	41/-	-	45-108	Estimate (UJ) the nondetect result for bis(2-chloroethoxy) SP-CSG12W.
2,4-dichlorophenol	44/-	-	45-113	Estimate (UJ) the nondetect

				result for 2,4-dichlorophenol in sample SP-CSG12W.
naphthalene	43/-	-	45-109	Estimate (J) the positive result for naphthalene in sample SP-CSG12W.
2,4,5-trichlorophenol	43/-	-	45-117	Estimate (UJ) the nondetect result for 2,4,5-trichlorophenol in sample SP-CSG12W.
2-chloronaphthalene	42/-	-	46-111	Estimate (UJ) the nondetect result for 2-chloronaphthalene in sample SP-CSG12W.
2-nitroaniline	44/-	-	49-122	Estimate (UJ) the nondetect result for 2-nitroaniline in sample SP-CSG12W.
acenaphthylene	41/-	21	49-117, <19	Estimate (J) the positive result for acenaphthylene in sample SP-CSG12W.
dimethylphthalate	43/-	-	50-120	Estimate (UJ) the nondetect result for dimethylphthalate in sample SP-CSG12W.
2,6-dinitrotoluene	47/-	-	51-126	Estimate (UJ) the nondetect result for 2,6-dinitrotoluene in sample SP-CSG12W.
acenaphthene	38/-	-	47-116	Estimate (J) the positive result for acenaphthene in sample SP-CSG12W.
2,4-dinitrophenol	-/47	-	0-36	Qualifications were not required.
dibenzofuran	39/-	-	49-117	Estimate (J) the positive result for dibenzofuran in sample SP-CSG12W.
2,4-dinitrotoluene	45/-	-	51-127	Estimate (UJ) the nondetect result for 2,4-dinitrotoluene in sample SP-CSG12W.
fluorene	38/-	-	50-119	Estimate (J) the positive result for fluorene in sample SP-CSG12W.
4-chlorophenylphenyl ether	43/-	-	49-118	Estimate (UJ) the nondetect result for 4-chlorophenylphenyl ether in sample SP-CSG12W.
diethylphthalate	45/-	-	49-126	Estimate (UJ) the nondetect result for diethylphthalate in sample SP-CSG12W.
4-nitroaniline	40/-	-	45-141	Estimate (UJ) the nondetect result for 4-nitroaniline in sample SP-CSG12W.
n-nitroso-di-phenylamine	44/-	-	51-124	Estimate (UJ) the nondetect result for n-nitroso-di-phenylamine in sample SP-CSG12W.
4-bromophenyl phenyl	46/-	-	51-120	Estimate (UJ) the nondetect

ether				result for 4-bromophenyl phenyl ether in sample SP-CSG12W.
hexachlorobenzene	45/-	-	51-122	Estimate (UJ) the nondetect result for hexachlorobenzene in sample SP-CSG12W.
phenanthrene	22/-	-	50-125	Estimate (J) the positive result for phenanthrene in sample SP-CSG12W.
carbazole	40/-	-	50-138	Estimate (J) the positive result for carbazole in sample SP-CSG12W.
anthracene	34/-	-	48-128	Estimate (J) the positive result for anthracene in sample SP-CSG12W.
di-n-butylphthalate	45/-	-	51-130	Estimate (J) the positive result for di-n-butylphthalate in sample SP-CSG12W.
fluoranthene	13/45	43	48-131, <40	Estimate (J) the positive result for fluoranthene in sample SP-CSG12W.
pyrene	20/-	37	49-131, <36	Estimate (J) the positive result for pyrene in sample SP-CSG12W.
benzo(a)anthracene	29/-	-	49-129	Estimate (J) the positive result for benzo(a)anthracene in sample SP-CSG12W.
chrysene	32/-	-	51-129	Estimate (J) the positive result for chrysene in sample SP-CSG12W.
benzo(b)fluoranthene	28/-	-	42-134	Estimate (J) the positive result for benzo(b)fluoranthene in sample SP-CSG12W.
benzo(k)fluoranthene	36/-	-	47-134	Estimate (J) the positive result for benzo(k)fluoranthene in sample SP-CSG12W.
benzo(a)pyrene	32/-	-	49-131	Estimate (J) the positive result for benzo(a)pyrene in sample SP-CSG12W.

Internal Standards

All criteria were met in the VOC and SVOC samples.

LCS Results

VOC:

The following table lists the compounds recovered outside of the LCS analyses and the resulting actions.

Compound	Recovery (%)	Control Limits	Validation Actions
cis-1,3-dichloropropene	116	44-112	Validation actions were not required as the results were nondetect and therefore not affected by the potential high bias.

SVOC:

The following table lists the compounds recovered outside of the LCS analyses and the resulting actions.

Compound	Recovery (%)	Control Limits	Validation Actions
2,4-dinitrophenol	72	0-36	Validation actions were not required as the results were nondetect and therefore not affected by the potential high bias.

Moisture Content

All criteria were met for the sample in this data package.

Field Duplicate Results

A field duplicate pair was not associated with this sample set.

Quantitation Limits and Data Assessment

VOC and SVOC

Results were reported which were below the lowest calibration standard level (RL) and above the method detection limit (MDL) in the VOC and SVOC analyses. These results were qualified by the laboratory (J). These results were qualified as estimated (J) due to uncertainty at the low end of calibration. Several compound results were above the lowest calibration standard therefore the J qualifiers were removed by the validator.

All VOC and SVOC samples were analyzed at a 1:1 dilution.

Sample Quantitation and Compound Identification

Calculations were spot-checked; no discrepancies were noted in the VOC and SVOC analyses.

Client: GEI Consultants, Inc.

Job Number: 220-2824-1
Sdg Number: 220-2824

Client Sample ID: SP-CS13NW-2

Lab Sample ID: 220-2824-5
Client Matrix: Solid

% Moisture: 35.8

Date Sampled: 09/24/2007 1255
Date Received: 09/24/2007 1454

8270C Semivolatile Compounds by Gas Chromatography/Mass Spectrometry (GC/MS)

Method: 8270C
Preparation: 3541
Dilution: 1.0
Date Analyzed: 09/25/2007 1818
Date Prepared: 09/25/2007 0846

Analysis Batch: 220-9637
Prep Batch: 220-9585

Instrument ID: HP 6890/5975
Lab File ID: A6654.D
Initial Weight/Volume: 15.44 g
Final Weight/Volume: 1.0 mL
Injection Volume: 1 uL

Analyte	DryWt Corrected: Y Result (ug/Kg)	Qualifier	MDL	RL

Date Received: 09/18/2007 1415

8270C Semivolatile Compounds by Gas Chromatography/Mass Spectrometry (GC/MS)

Method: 8270C
Preparation: 3541
Dilution: 1.0
Date Analyzed: 09/19/2007 1652
Date Prepared: 09/19/2007 1217
Analysis Batch: 220-9433
Prep Batch: 220-9405
Instrument ID: HP 6890/5973 GC/MS
Lab File ID: U1867.D
Initial Weight/Volume: 15.46 g
Final Weight/Volume: 1 mL
Injection Volume: 1 uL

Analyte	DryWt Corrected: Y	Result (ug/Kg)	Qualifier	MDL	RL

Associated QC Samples:	Field Blanks:	None associated
	Field Duplicate pair:	None associated

The above-listed soil samples were collected on March 30, 2007 and were analyzed for volatile organic compounds (VOCs) by SW-846 method 8260B and semivolatile organic compounds (SVOCs) by SW-846 method 8270C. The data validation was based on the USEPA Region II Standard Operating Procedure (SOP) for the Validation of Organic Data Acquired using SW-846 Method 8260B, SOP No. HW-24, Revision 1, June 1999, USEPA Region II Standard Operating Procedure (SOP) for the Validation of Organic Data Acquired using SW-846 Method 8270C, SOP No. HW-22, Revision 2, June 2001 and the USEPA CLP National Functional Guidelines for Organic Review (January 2005).

The organic data were evaluated based on the following parameters:

* • Data Completeness
* • Holding Times and Sample Preservation

*	•	Gas Chromatography/Mass Spectrometry (GC/MS) Tunes
	•	Initial and Continuing Calibrations
	•	Blanks
	•	Surrogate Recoveries
	•	Matrix Spike/Matrix Spike Duplicate (MS/MSD) Results
*	•	Internal Standards
	•	Laboratory Control Sample (LCS) Results
NA	•	Field Duplicate Results
*	•	Moisture Content
	•	Quantitation Limits and Data Assessment
	•	Sample Quantitation and Compound Identification

* - All criteria were met.

NA - A field duplicate pair was not associated with this sample group.

All results are usable for project objectives with the exception of select tentatively identified compounds (TICs) which were rejected due to method blank contamination.

Qualifications were not applied to the data as a result of sampling error. Qualifications applied to the data as a result of analytical error are discussed below.

VOC

- Potential uncertainty exists for select VOC results which were below the lowest calibration standard and quantitation limit. These results were qualified as estimated (J) in the associated samples by the laboratory. These results can be used for project objectives as estimated values which may have a minor impact on the data usability.

- The positive results for methylene chloride in samples SP-CS14, SP-CS13, SP-CS11, SP-CS09, SP-CS08, SP-CS06, SP-CS05, SP-CS04, and SP-CS03 and acetone in samples SP-CS13, SP-CS12, SP-CS11, SP-CS10, SP-CS07, SP-CS06, SP-CS05, SP-CS04, and SP-CS03 were qualified as nondetect (U) at the reporting limit due to method blank contamination. The results can be used for project objectives as nondetects. This qualification may have a minor impact on the data usability.

- The positive results for methylene chloride in samples SP-CS10 and SP-CS07 were qualified as nondetect (U) at the reported values due to method blank contamination. The results can be used for project objectives as nondetects with elevated quantitation limits. This qualification may have a minor impact on the data usability.

- The nondetect results for methyl acetate and acetone in all samples were qualified as

estimated (UJ) due to initial calibration nonconformances. The results can be used for project objectives as nondetects with estimated quantitation limits. This qualification may have a minor impact on the data usability.

- The positive and nondetect results for chloromethane, chloroethane, trichlorofluoromethane, methyl acetate, and acetone in samples SP-CS14, SP-CS13, SP-CS12, SP-CS09, SP-CS08, and SP-CS06 and chloroethane, methylene chloride, and tetrachloroethene in samples SP-CS11, SP-CS10, SP-CS07, SP-CS05, SP-CS04, and SP-CS03 were qualified as estimated (J/UJ) due to continuing calibration nonconformances. The direction of the bias cannot be determined from this nonconformance. The results can be used for project objectives as estimated values and nondetects with estimated quantitation limits. This qualification may have a minor impact on the data usability.

- The positive and nondetect VOC results for sample SP-CS05 were qualified as estimated (J/UJ) due to low surrogate recoveries. The results can be used for project objectives as estimated values and nondetects with estimated quantitation limits and may be biased low. This qualification may have a minor impact on the data usability.

- The blank-qualified nondetect results for methylene chloride in samples SP-CS10 and SP-CS07 were qualified as estimated (UJ) due to high recoveries in the LCS analyses. The results can be used for project objectives as nondetects with estimated quantitation limits. This qualification may have a minor impact on the data usability.

SVOC

- Potential uncertainty exists for select SVOC results which were below the lowest calibration standard and quantitation limit. These results were qualified as estimated (J) in the associated samples by the laboratory. These results can be used for project objectives as estimated values which may have a minor impact on the data usability.

- Tentatively identified compounds (TICs), which were detected in samples at levels less than ten times those in the associated SVOC method blanks, were rejected (R).

- The positive results for acenaphthylene, fluoranthene, pyrene, benzo(a)anthracene, chrysene, benzo(b)fluoranthene, and benzo(a)pyrene in sample SP-CS10 were qualified as estimated (J) due to high recoveries in the MS/MSD analyses. The results can be used for project objectives as estimated values. This qualification may have a minor impact on the data usability.

- The nondetect results for 3,3'-dichlorobenzidine, 2,4-dinitrophenol, 4,6-dinitro-2-methylphenol, and dibenzo(ah)anthracene in sample SP-CS10 were qualified as estimated

(UJ) due to low recoveries in the MS/MSD analyses. The results can be used for project objectives as nondetects with estimated quantitation limits. This qualification may have a minor impact on the data usability.

- The nondetect results for 3-nitroaniline and 3,3'-dichlorobenzidine in all samples were qualified as estimated (UJ) due to low recoveries in the LCS analyses. The results can be used for project objectives as nondetects with estimated quantitation limits. This qualification may have a minor impact on the data usability.

The validation findings were based on the following information.

Data Completeness

The data package was complete as defined under the requirements for the NYSDEC ASP Category B deliverables for the VOC and SVOC analyses.

Holding Times and Sample Preservation

All criteria were met in the VOC and SVOC analyses.

GC/MS Tunes

All criteria were met in the VOC and SVOC analyses.

Initial and Continuing Calibrations

Compounds that did not meet criteria in the VOC and SVOC initial and continuing calibrations are summarized in the following tables.

Instrument ID MSVOAK Compound	IC 03/27/07	CC 04/02/07	CC 04/03/07
acetone	X (r= 0.981)	XX (22.6%)	
methyl acetate	X (r= 0.989)	XX (30.8%)	
chloromethane		XX (21.7%)	
chloroethane		XX (27.7%)	XX (20.7%)
trichlorofluoromethane		XX (26.6%)	
methylene chloride			XX (43.3%)

Instrument ID MSVOAK Compound	IC 03/27/07	CC 04/02/07	CC 04/03/07
tetrachloroethene			XX (29.5%)
Samples Affected	All samples	SP-CS14, SP-CS13, SP-CS12, SP-CS09, SP-CS08, SP-CS06	SP-CS11, SP-CS10, SP-CS07, SP-CS05, SP-CS04, SP-CS03, SP-CS05 RE

Instrument ID BNAB Compound	IC 03/15/07
benzaldehyde	X (22.5%)
Samples Affected	All samples

Instrument ID BNAA Compound	IC 03/23/07	CC 04/03/07
benzaldehyde	X (r=0.934)	
2,2'-oxybis(1-chloropropane)		XX (20.8%)
Samples Affected	SP-CS04DL	SP-CS04DL

X = Initial calibration (IC) relative standard deviation (%RSD) > 15%; Estimate (J) positive result only. If regression was performed and correlation coefficient (r) < 0.990; estimate (J/UJ) positive and nondetect results.

XX = Continuing calibration (CC) percent difference (%D) > 20; estimate (J/UJ) positive and nondetect results.

XXX = Continuing calibration (CC) percent difference (%D) > 90; estimate (J) positive results and reject (R) nondetect results.

+ = Response factor (RRF) < 0.05; Estimate (J) positive results and reject (R) nondetect results.

The nondetect results for methyl acetate and acetone in all samples were estimated (UJ) due to initial calibration nonconformances.

The following positive and nondetect results were estimated (J/UJ) due to continuing calibration nonconformances: chloromethane, chloroethane, trichlorofluoromethane, methyl acetate, and acetone in samples SP-CS14, SP-CS13, SP-CS12, SP-CS09, SP-CS08, and SP-CS06 and chloroethane, methylene chloride, and tetrachloroethene in samples SP-CS11, SP-CS10, SP-CS07, SP-CS05, SP-CS04, and SP-CS03.

Validation actions were not required for benzaldehyde and 2,2'-oxybis(1-chloropropane) in sample SP-CS04DL due to initial and continuing calibration nonconformances as these results were not

reported from the diluted analyses.

Blanks

Target compound contaminants were not detected in the SVOC method blanks.

The following table summarizes the VOC method blank contamination.

Compound	Type of Blank	Associated Samples	Maximum Concentration *	Blank Action Level
acetone	Method	All samples	7.5 ug/L	75 ug/L
methylene chloride	Method	All samples	30.3 ug/L	303 ug/L

* Due to the difference in sample weight of the method blank (5 gram) versus the sample analysis weight (1 gram), the raw data results were compared.

Blank Actions

If the sample concentration ≤ RL and ≤ blank action level, qualify the result as not detected (U) at the RL.
If the sample concentration > RL and ≤ blank action level, qualify the result as not detected (U) at the reported value.
If the sample concentration > blank action level, report the value unqualified.

Based on the action levels determined, the positive results for methylene chloride in samples SP-CS14, SP-CS13, SP-CS11, SP-CS09, SP-CS08, SP-CS06, SP-CS05, SP-CS04, and SP-CS03 and acetone in samples SP-CS13, SP-CS12, SP-CS11, SP-CS10, SP-CS07, SP-CS06, SP-CS05, SP-CS04, and SP-CS03 were qualified as nondetect (U) at the reporting limit due to method blank contamination.

Based on the action levels determined, the positive results for methylene chloride in samples SP-CS10 and SP-CS07 were qualified as nondetect (U) at the reported value due to method blank contamination.

Tentatively identified compounds (TICs) were detected in the SVOC method blank. TICs, which were detected in these samples at levels less than ten times those in the method blank, were rejected (R).

Surrogate Recoveries

All criteria were met in the SVOC analyses.

The following table summarizes the surrogate recoveries that failed to meet the acceptance criteria in the VOC analyses performed:

Sample ID	Percent Recovery				Action
	DBFM 75-125	DCE 75-125	TOL 75-125	BFB 75-125	
SP-CS05	-	71%	-	71%	Estimate (J/UJ) the positive and nondetect results in sample SP-CS05.
SP-CS05 RE	-	-	-	72%	Validation action was not required as the reanalysis results were not reported.

- Recovery within limits.

MS/MSD Results

The MS/MSD analyses were performed on sample SP-CS10 for VOC and SVOCs. The following table lists the recoveries and/or RPDs outside of control limits.

Compound	Recovery (%)	RPD (%)	Control Limits	Validation Actions
methyl acetate tetrachloroethene	158, 155 148, 148	- -	37-150/20 68-148/20	Validation actions were not required as the results were nondetect and therefore not affected by the potential high bias.
3,3'-dichlorobenzidine	MS 28	-	31-111/50	Estimate (UJ) the nondetect result for 3,3'-dichlorobenzidine in sample SP-CS10.
acenaphthylene fluoranthene pyrene benzo(a)anthracene chrysene benzo(b)fluoranthene benzo(a)pyrene	108, 108 221, 205 268, 237 137, 126 184, 179 189, 195 147, 126	- - - - - - -	52-107/50 55-105/50 20-150/50 60-100/50 51-115/50 42-126/50 58-102/50	Estimate (J) the results for acenaphthylene, fluoranthene, pyrene, benzo(a)anthracene, chrysene, benzo(b)fluoranthene, and benzo(a)pyrene in sample SP-CS10.
2,4-dinitrophenol 4,6-dinitro-2-methylphenol dibenz(ah)anthracene	0, 0 0, 0 0, 0	- - -	26-131/50 40-105/50 41-130/50	As the sample was analyzed at a five-fold dilution, professional judgement was taken to estimate (UJ), rather than reject, the nondetect results for 2,4-dinitrophenol, 4,6-dinitro-2-methylphenol, and dibenzo(ah)anthracene in sample SP-CS10.

- Within control limits

Internal Standards

All criteria were met in the VOC and SVOC analyses.

LCS Results

The following table lists the compound recoveries found outside of the laboratory established control limits in the LCS analyses and the resultant actions in the VOC and SVOC analyses.

Compound	Recovery (%)	Control Limits	Associated Samples	Actions
methylene chloride	215	70-130	SP-CS11, SP-CS10, SP-CS07, SP-CS05, SP-CS04, SP-CS03	Estimate (UJ) the blank-qualified nondetect results for methylene chloride in samples SP-CS10 and SP-CS07.
4-nitrophenol	112	45-95	All samples	Validation actions were not required as results were nondetect and therefore not affected by the potential high bias.
3-nitroaniline 3,3'-dichlorobenzidine	20 25	27-88 31-111	All samples	Estimate (UJ) the nondetect results for 3-nitroaniline and 3,3'-dichlorobenzidine in all samples.

Field Duplicate Results

A field duplicate pair was not associated with this sample group.

Quantitation Limits and Data Assessment

Results were reported which were below the lowest calibration standard level (RL) and above the method detection limit (MDL) in the VOC and SVOC analyses. These results were qualified by the laboratory (J). These results were qualified as estimated (J) due to uncertainty at the low end of calibration.

The following table lists the sample reanalyses which were performed and reported.

Sample	VOC Analysis Reported	SVOC Analysis Reported
SP-CS14	1 gram of sample was used for analysis instead of the typical method amount of 5 grams. Reporting limits were elevated 5-fold.	A 5-fold dilution was performed and reported. Nondetect quantitation limits were elevated accordingly.
SP-CS13	1 gram of sample was used for analysis instead of the typical method amount of 5 grams. Reporting limits were elevated 5-fold.	A 10-fold dilution was performed and reported. Nondetect quantitation limits were elevated accordingly.

Sample	VOC Analysis Reported	SVOC Analysis Reported
SP-CS12	1 gram of sample was used for analysis instead of the typical method amount of 5 grams. Reporting limits were elevated 5-fold.	A 10-fold dilution was performed and reported. Nondetect quantitation limits were elevated accordingly.
SP-CS11	1 gram of sample was used for analysis instead of the typical method amount of 5 grams. Reporting limits were elevated 5-fold.	A 20-fold dilution was performed and reported. Nondetect quantitation limits were elevated accordingly.
SP-CS10	1 gram of sample was used for analysis instead of the typical method amount of 5 grams. Reporting limits were elevated 5-fold.	A 5-fold dilution was performed and reported. Nondetect quantitation limits were elevated accordingly.
SP-CS09	1 gram of sample was used for analysis instead of the typical method amount of 5 grams. Reporting limits were elevated 5-fold.	A 10-fold dilution was performed and reported. Nondetect quantitation limits were elevated accordingly.
SP-CS08	1 gram of sample was used for analysis instead of the typical method amount of 5 grams. Reporting limits were elevated 5-fold.	A 5-fold dilution was performed and reported. Nondetect quantitation limits were elevated accordingly.
SP-CS07	1 gram of sample was used for analysis instead of the typical method amount of 5 grams. Reporting limits were elevated 5-fold.	NR
SP-CS06	1 gram of sample was used for analysis instead of the typical method amount of 5 grams. Reporting limits were elevated 5-fold.	A 5-fold dilution was performed and reported. Nondetect quantitation limits were elevated accordingly.
SP-CS05	1 gram of sample was used for analysis instead of the typical method amount of 5 grams. Reporting limits were elevated 5-fold. Sample were reanalyzed due to poor surrogate recoveries. Results from the initial analysis were reported as interference was confirmed in reanalysis.	A 20-fold dilution was performed and reported. Nondetect quantitation limits were elevated accordingly.
SP-CS04	1 gram of sample was used for analysis instead of the typical method amount of 5 grams. Reporting limits were elevated 5-fold.	Results for fluoranthene and pyrene were reported from the 50-fold dilution. All other results were reported from the 10-fold dilution analysis.
SP-CS03	1 gram of sample was used for analysis instead of the typical method amount of 5 grams. Reporting limits were elevated 5-fold.	A 10-fold dilution was performed and reported. Nondetect quantitation limits were elevated accordingly.

NR - Dilution or reanalysis was not required.

Sample Quantitation and Compound Identification

Calculations were spot-checked; no discrepancies were noted in the VOC analyses.

Upon review, the result for pyrene in sample SP-CS14 was found to be incorrectly reported as 3300 ug/kg, but should be 3000 ug/kg. The validator edited the reporting form. The TIC at retention time 17.38 was removed from the reporting form for sample SP-CS14 as the result was not supported in the raw data.

Sample Quantitation and Compound Identification

Calculations were spot-checked; no discrepancies were noted.

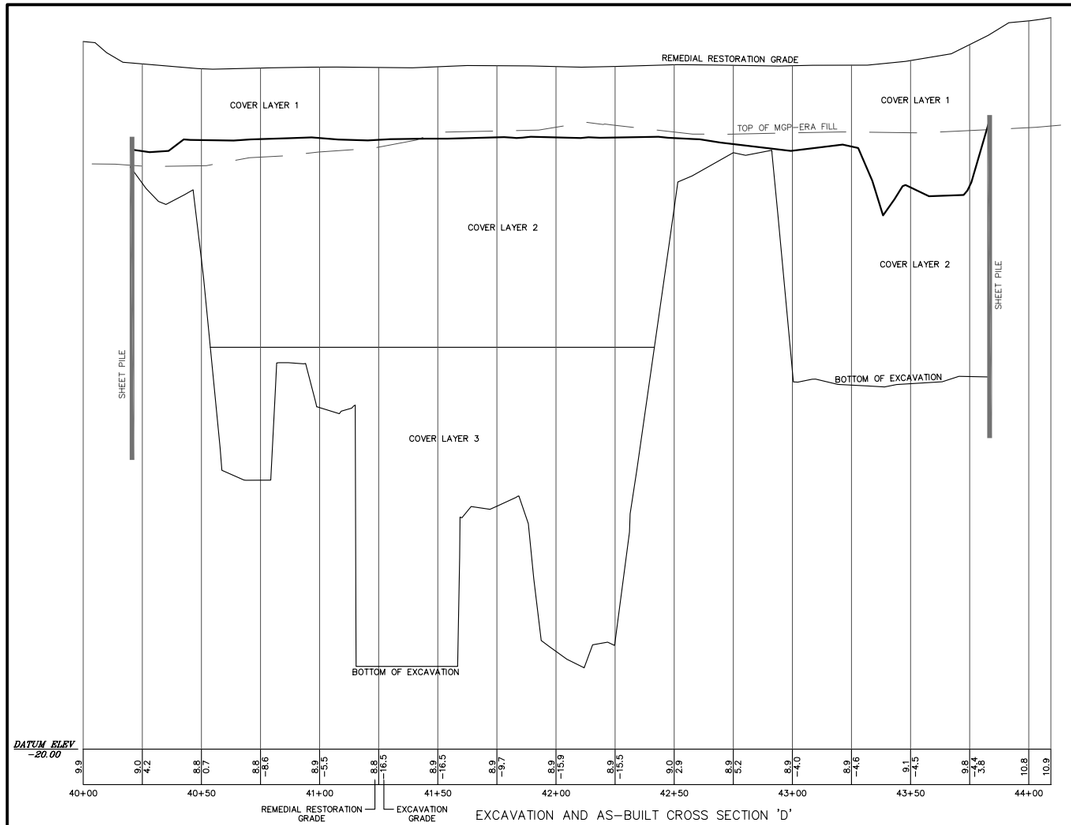
NOTES



1. HORIZONTAL AND VERTICAL ORIENTATION FROM OPERABLE UNIT 1 REMEDIAL ACTION DRAWINGS, SHEET 3 (CON EDISON CONTROL POINTS SET BY GEI), PREPARED BY GEI CONSULTANTS, PROJECT NO. 013942, 4-22-05.
2. AS-BUILT CONDITIONS SHOWN HEREON REPRESENT POST CONSTRUCTION GROUND SURFACE FROM FIELD MEASUREMENTS PERFORMED BY THIS FIRM IN DECEMBER 2007.
3. NO STRUCTURES OR PIPING WERE LEFT IN PLACE WITHIN THE EXCAVATION AREA PER CONTRACTORS NOTES.
4. GRADING CONTOURS SHOWN HEREON REPRESENT REMEDIAL RESTORATION GRADING.
5. ALL INSTALLED SHEET PILING WAS REMOVED AFTER CONSTRUCTION PER CONTRACTOR NOTES. ANCHORS WERE DE-TENSIONED AND LEFT IN PLACE AS SHOWN HEREON.
6. COVER LAYER 3 AREAS SHOWN HEREON FROM CONTRACTORS FIELD NOTES.

Notes and Definitions

U	Analyte included in the analysis, but not detected
S-04	The surrogate recovery for this sample is outside of established control limits due to a sample matrix effect.
G	G denotes analyte recovery is greater than the upper quality control limit.
DET	Analyte DETECTED
ND	Analyte NOT DETECTED at or above the reporting limit
NR	Not Reported
dry	Sample results reported on a dry weight basis
RPD	Relative Percent Difference

The results in this report apply to the samples analyzed in accordance with the chain of custody document. This analytical report must be reproduced in its entirety.

Notes and Definitions

U	Analyte included in the analysis, but not detected
S-04	The surrogate recovery for this sample is outside of established control limits due to a sample matrix effect.
B	Analyte is found in the associated blank as well as in the sample (CLP B-flag).
DET	Analyte DETECTED
ND	Analyte NOT DETECTED at or above the reporting limit
NR	Not Reported
dry	Sample results reported on a dry weight basis
RPD	Relative Percent Difference

Notes and Definitions

U	Analyte included in the analysis, but not detected
S-04	The surrogate recovery for this sample is outside of established control limits due to a sample matrix effect.
B	Analyte is found in the associated blank as well as in the sample (CLP B-flag).
DET	Analyte DETECTED
ND	Analyte NOT DETECTED at or above the reporting limit
NR	Not Reported
dry	Sample results reported on a dry weight basis
RPD	Relative Percent Difference

The results in this report apply to the samples analyzed in accordance with the chain of custody document. This analytical report must be reproduced in its entirety.
