

## Commercial & Industrial Energy Efficiency Program

# Success Story: Window Replacements

Customer  
**Sage Realty**

Participating Contractor  
**INF Associates LLC**

Location  
**Manhattan, NY**

### Overview

Built in 1967, the 39-story commercial office building at 437 Madison Avenue spans more than 905,785 square feet in Midtown Manhattan. To enhance energy efficiency and reduce operating costs, the property management team partnered with Con Edison's Commercial & Industrial Energy Efficiency Program. Incentives from the program played a vital role in making the project possible.

With support from INF Associates LLC, they replaced 1,718 square feet of east-facing single-pane windows with high-efficiency double-paned insulated glass.

A total of 34 tinted windows were installed, each featuring 12mm-thick panes and 18mm argon-filled spacers. This upgrade significantly improved the building envelope, helping to reduce both electric and steam use.

High-efficiency double-paned windows provide better insulation while reducing solar heat, glare, and UV exposure. These benefits ease the load on cooling systems, improve performance, and lower energy bills over time. Enhanced thermal performance also reduces heat loss and gain, creating a more comfortable environment for staff and visitors.

Plus, by lowering fossil fuel consumption, the upgrade helps the building avoid potential fines under Local Law 97.
