Testimonial

My house was built in 1940 and has plenty of character but the appliances were showing their age. When I found out about **Con Edison's Energy Exchange Program**, I took the opportunity to upgrade to energy-efficient technology, reduce energy costs, improve air quality, and increase comfort—all at no cost.

Through the program, I worked with **Sunny HVAC** to install an induction range, an electric dryer, and a heat pump water heater. The process took about four to six months, and I appreciated how responsive and communicative the Con Edison program team was throughout.

Since the upgrades, I've been very pleased with the results. The heat pump water heater runs quietly and delivers hot water just as reliably as before. The induction range makes cooking faster, the electric dryer is quieter, and the air inside feels cleaner. Plus, switching to electric appliances has also lowered my previously high operating costs of the old gas dryer and stove.

I encourage other homeowners to take advantage of the Energy Exchange Program as a way to make sustainable, forward-thinking improvements that provide lasting comfort and efficiency.
