# Success Story: Boosting Comfort & Efficiency At Home

Customer  
**Malcolm P.**

Participating Contractor  
**County Comfort Home Solutions**

Location  
**New Rochelle, NY**

## Overview

When Malcolm P. moved into his 100-year-old home in upstate New York, he was excited by its charm, but quickly realized it came with a hefty price tag in heating bills and year-round discomfort. To make his home more energy efficient and livable, Malcolm focused on smart upgrades that would also offer long-term savings.

"I'd say most of the renovations we've done have focused on being more efficient and getting the most bang for our buck," he said. "Plus, making the house more comfortable."

He installed mini-splits to improve heating and cooling efficiency, solar panels on the roof to harness clean energy, and new windows to seal in comfort and reduce drafts.

The final step was insulating the attic. Through Con Edison's **Weather Ready Program**, Malcolm received **\$2,500 in incentives** and was able to complete the project with a Participating Contractor. The new insulation helps lower energy loss and costs, prevents pipes from freezing, and reduces allergens such as mold and mildew spores.

With the attic now properly insulated, Malcolm converted the space into a cozy home office. "I don't want to be sweating in the summer or be cold in the winter, and have to put on another jacket inside," he said. "I just want to be comfortable and that's the main thing."

Thanks to Con Edison's help, the century-old home is now a place of ease and sustainability for Malcolm.
